## Contents

Foreword by R.E. Münch, *Symposium Chairman*  
9

### Geostationary Satellites

*Chairmen: R.E. Münch J.-P. Carrou  
Organisers: S. Pallaschke J. Schoenmaekers*

Co-location of six ASTRA satellites: Assessment after one year of operations  
13

Strategies for complex geosynchronous transfers  
E. Cazala-Hourcade & al., *CNES, CISI & IXI, France*  
19

Interferometric tracking for close geosynchronous satellites  
S. Kawase & F. Sawada, *Communications Research Laboratory, Japan*  
29

Advanced tracking and orbit determination for geostationary satellites with ionic propulsion  
P. Francken & al., *Soc. Europ. des Satellites, Luxembourg & DLR-GSOC, Germany*  
35

Relative station-keeping optimisation for the Starsys constellation  
L. Lefebvre & al., *CNES & LAAS, France*  
41

NASDA satellite-to-satellite ranging experiments – Results of the experiments with ETS-VI and plan for real-time trajectory estimation experiments with COMETS  
M. Ogawa & al., *NASDA, Fujitsu & Mitsubishi Space Software, Japan*  
47

On investigation of long-term orbital evolution of geostationary satellites  
R.I. Kiladze & al., *Abastumani Astrophysical Observatory, Georgia & RAN, Russia*  
53

Orbit determination of geosynchronous satellites of a European navigation satellite system (ENSS)  
G.W. Hein & al., *IfEN, Germany*  
59

Near-miss analysis for uncoordinatedly colocated geosynchronous satellites  
F. Savada & S. Kawase, *Communications Research Laboratory, Japan*  
65

### Precise Orbit Determination

*Chairmen: J. Dow, J. Teles  
Organiser: J. Schoenmaekers*

High-accuracy autonomous navigation using the Global Positioning System (GPS)  
Son H. Truong & al., *NASA-GSFC & Computer Sciences Corp., USA*  
73

Orbit determination of the Mir space station from GPS navigation data  
E. Gill, *DLR-GSOC, Germany*  
79
Real-time ephemeris and clock corrections for GPS and GLONASS satellites
M.M. Romay-Merino & al., *GMV, Spain* 85

Absolute & relative navigation of spacecraft using GPS: The ATV rendezvous pre-development flight demonstrations
T.J. Martín-Mur & al., *ESA-ESOC* 93

RGPS post-flight analysis of ARP-K flight demonstration
G. Moreau & H. Marcille, *Matra-Marconi Space, France* 97

Monitoring of Global Navigation Satellite Systems (GNSS)
P. Bernedo & al., *ESA-ESOC* 103

Use of GPS for determining motion parameters of the Mir space station

Impact of PRARE on ERS-2 orbit determination
P. Visser & al., *DEOS, The Netherlands* 115

Using GPS for ionospheric corrections of ESA tracking data
J. Feltens & al., *ESA-ESOC* 121

Precise orbit determination for GPS/Met using GPS-SST data
Z. Kang & al., *GeoForschungszentrum Potsdam, Germany* 127

ADEOS/RIS laser tracking experiments
M. Maeda & al., *NASDA, CRL & Fujitsu, Japan* 131

**Attitude Determination & Control**

*Chairmen: B. Kaufman, L. Fraiture, V. Orlando*

*Organisers: R. Mugellesi-Dow, J. Schoenmaekers*

Re-use of attitude software
L. Fraiture, *ESA-ESOC* 139

Attitude smoothing using the REQUEST algorithm
I.Y. Bar-Itzhack, *Israel Institute of Technology* 153

Batch and filter approaches to spacecraft sensor alignment estimation
M.C. Zanardi & M.D. Shuster, *Univ. Estad. São Paulo, Brazil & Univ. of Florida, USA* 159

MARMOTTES multi-mission attitude modelisation
L. Maisonobe, *CNES, France* 167

Comprehensive evaluation of attitude & orbit estimation using real Earth magnetic field data
J. Deutschmann & I. Bar-Itzhack, *NASA-GSFC & Israel Inst. of Technology* 173

The use of magnetometers for accurate attitude determination
J. Hashmall & J. Sedlak, *Computer Sciences Corp., USA* 179

Spin-axis tilt evaluation from an optimisation approach
R.V.F. Lopes, *INPE, Brazil* 185
ISO momentum biasing studies  
C.A. Stephenson, *Sciences Systems (Space) & ESA*  
191

ESA remote-sensing satellites: A cross-correlation of in-flight attitude pointing performances  
X. Marc & al., *ESA-ESOC, EDS & Sciences Systems (Space)*  
197

In-orbit performances of AMOS-1 AOCS  
R. Azor, *IAI-MBT, Israel*  
209

Meteosat long-term spin-axis drift and manoeuvre optimisation  
A. M. Sørensen, *Eumetsat*  
215

GPS-based navigation solution and spin-axis attitude determination: Numerical results of on-ground experiment  
R.V.F. Lopez & al., *INPE & UFPR, Brazil*  
221

New attitude control algorithms with applications to space telescopes  
K. Spindler, *Fachhochschule Wiesbaden, Germany*  
227

An investigation into the milliarcsecond attitude control errors of Hubble Space Telescope  
A.J. Bradley & al., *AlliedSignal Aerospace, NASA-GSFC, Comp. Sciences Corp., USA*  
233

Determination of MOMS-2P camera sighting areas during Earth surface survey  
M.Yu. Beliaev & al., *Energia Rocket & Space Corp., Russia & DLR-GSOC*  
239

ISO: In-orbit calibration of the AOCS sensors and maximisation of pointing performance  
A.J. Batten & C.A. Stephenson, *Sciences Systems Space, UK & ESA Villafranca*  
245

**Orbit Determination**

*Chairmen: J. Campbell, O. Montenbruck*  
*Organiser: S. Pallaschke*

Usefulness of antenna angles for initial orbit determination  
S. Pallaschke, *ESA-ESOC*  
253

FISOR – An efficient orbit determination software dedicated to local user terminal  
A. Comps, *CNES, France*  
259

General characteristics of real-time onboard orbit determination  
J.-P. Berthias & al., *CNES, France*  
267

An orbit determination approach for small satellites  
G. Laneve & F. Curti, *Università di Roma ‘La Sapienza’, Italy*  
275

Results derived from analysis of 'Shijian-4' satellite orbit  
Gao Huai-bao & Liu Qiang, *Science & Applied Research Centre, China*  
283

Semi-analytical theory of mean orbital motion: A new tool for computing ephemerides  
S. Bruinsma & al., *Observatoire de la Côte d’Azur & CNES, France*  
289

Derivatives of the geopotential with respect to rectangular coordinates & their spectral decomposition  
295
Interplanetary Flight

Chairmen: J. Campbell, B. Kaufman, T. Uesugi
Organisers: R. Mugerlesi-Dow, S. Pallaschke

Navigation for the new millennium: Autonomous navigation for Deep-Space 1
J.E. Riedel & al., JPL, USA

Low lunar orbit analysis, determination and selection for soft landing on the lunar South Pole
R. Floberghagen & al., DEOS, Netherlands & Politecnico di Milano, Italy

ROSETTA: Optimal manoeuvre planning for multiple swing-by trajectories
J. Schoenmaekers, ESA-ESOC

Cometary activity model for near nucleus space flight dynamics analysis
V.V. Ivashkin & M.B. Mora, Keldysh Inst., Russia & Grupo Mec. del Vuelo, Spain

Maneuver design for Galileo Jupiter approach & orbital operations
M.G. Wilson & al., JPL, USA

Optimal flights to near-Earth asteroid for impact-kinetic influence
V.V. Ivashkin & al., Keldysh Inst. Appl. Math. & Bauman Moscow State Univ., Russia

Combined model of the lunar gravity field

Outline of the experimental Lunar Lander in SELENE Project
T. Kinoshita & al., NASDA & ISAS, Japan

Low-cost Phobos sample return mission
N.A. Eismont & A.A. Sukhanov, IKI, Russia

Navigation and the Mars global surveyor mission
P. Esposito & al., JPL, USA

New analytical theory of motion of Phobos & Deimos for navigation support of missions to Mars
S. M. Kudryavtsev & al., Mission Control Centre, Russia

Space dynamics analysis of the spacecraft Mars-96 abnormal flight
Yu. I. Mityaev & al., Mission Control Centre, Keldysh Inst. & Lavochkin Assoc., Russia

Mathematics, Analysis & Orbit Control

Chairman: J.-P. Carrou
Organiser: J. Schoenmaekers

Approximate analytical optimisation of the low thrust
A.A. Sukhanov, IKI, Russia

Frozen orbits in the tesseral artificial satellite theory
A. Elipe & M. Lara, Grupo de Mecánica Espacial & Real Obs. de la Armada, Spain
STCV: Ground-based trajectography system for tracking Ariane launchers
A. Goodwin & al., Logica UK

Study of spacecraft navigation-guidance problems
T. Ichikawa, ISAS, Japan

High-accuracy orbit control for the ERS spacecraft
M. Rosengren, ESA-ESOC

Planning for an unconventional, highly-elliptic orbit
V.W. Kudielka, OeSVS-Amsat, Austria

Systems & Operations

Chairmen: T. Stengle, E. L. Akim
Organisers: S. Pallaschke, R. Mugellesi-Dow

INPES's flight dynamics team experience throughout four years of SCD-1 in-orbit operation:
Main issues, improvements and trends
V. Orlando & al., INPE, Brazil

Consideration of off-nominal situations in mission planning of the Soyuz spaceships and
the Progress cargo vehicles
T.V. Matveeva, Rocket & Space Corp. Energia, Russia

Flight dynamics support for the gyroless operations of XMM
G. Gienger & al., ESA-ESOC & Logica UK

Computational model of the Earth disturbed atmosphere and a high-accuracy reentry guidance
for a vehicle with middle lift-to-drag ratio
Yu.G. Sikharoulidze & al., Keldysh Inst. of Applied Mathematics, Russia

Flight dynamics operations in Interball project
N.A. Eismont & al., IKI, Russia & Inst. Atmospheric Physics, Czech Republic

Orbital stage abort trajectories after separation from carrier
M. Mayrhofer & G. Sachs, Technische Universität München, Germany

Operational prediction of reentry vehicle motion
N.M. Ivanov & V.G. Sobolevskiy, Mission Control Centre, Russia

High-precision orbit determination and altimeter calibration for ERS
R. Zandbergen & al., ESA-ESOC

Small satellites constellations for continuous regional surveillance
C. Ulivieri & al., Università di Roma 'La Sapienza', Italy

Dynamic schemes optimisation for scientific experiments and different flight operations
onboard the Mir orbital complex
I.N. Tereshina & V.M. Stazhkov, Rocket & Space Corp. Energia, Russia
Spacecraft Dynamics

Chairman: L. Fraiture
Organiser: R. Mugellesi-Dow

Accelerometric measurements of satellite dynamics
L. Sehnal & al., Astronomical Institute, Czech Republic

Equator-S spacecraft attitude dynamics simulation
U. Feucht & al., DLR-GSOC & DLR Institute for Robotics & System Dynamics, Germany

Participants
