7th International Symposium on

Materials in Space Environment

Toulouse, France
16-20 June 1997

Co-sponsored by: ONERA, CNES & ESA
CONTENTS

Foreword by Alain Paillous, Symposium Chairman 9

Opening Session
Space materials: Solution and avoidance of problems: ISO & FIRST
J.A. Steinz & T. Passvogel, ESA/ESTEC 13

Contamination control on space vehicles: Evolution of a space profession
J. Guillin & E. Werling, CNES, France 19

Materials & process technology developed for the International Space Station
H.W. Babel & Ch. Jones, Mc Donnell Douglas Aerospace, USA 31

Space standardisation activities and their effects in the space materials domain
J.W. Carter, Matra Marconi Space, France 49

Radiations
Chairpersons: M. Romero & V. Toupikov

Optical degradation of heat-resistant polymer film under UV & charged particle radiation
M. Iwata & al., DAA, ISAS, UBE Ind. & Suzuko Corp., Japan 59

Assessment of dose-coefficients as a performance parameter for optical glasses in a space radiation environment
A.I. Gusarov & al., Inst. für Festkörperforschung, Germany & ESA-ESTEC 67

Degradation of mechanical and electrophysical properties of teflon-FEP films under combined action of far UV & thermal cycling
V.I. Toupikov & al., Karpov Inst. of Physical Chemistry, Russia & ESA/ESTEC 77

Degradation of materials under the action of soft X-ray radiation from solar flares
A. Milintchouk & al., Brunel University, UK & ESA-ESTEC 87

Posters
Development of a facility for the simulation of high-energy solar radiation
P. Coucke, AMOS, Belgium & M. Van Eesbeek, ESA/ESTEC 97

The nature of electrostatic discharges as studied during preflight laboratory testing of 'Electro' spacecraft
A.P. Tyutnev & al., NPP Inst. of Electromechanics, INP/MSU etc., Russia 101

Electrical conductivity of polymers under ionising radiation & its prediction methods
S.A. Khatipov & V.P. Sichkar, Karpov Institute of Physical Chemistry, Russia 107

Exposure of spacecraft insulators to energetic ions
L. Zhang & al., Osaka University, Japan 113

Gas-jet simulator of solar VUV & soft X-ray radiation and irradiation effect on some material
E.T. Verkhovtseva & al., B. Verkin Inst., Ukraine & DLR, Germany 119
Contamination
Chairmen : J. Scialdone & A. Zwaal

Initial contamination control for the Next-Generation Space Telescope (NGST)
E.M. Wooldridge, NASA-GSFC, USA 127

Contamination control program for the Hubble Space Telescope second servicing mission
P.A. Hansen, NASA-GSFC & C.R. Maag, T&M Engineering, USA 135

Variations in the telemetry of an Offeq satellite’s sun sensors
Y. Noter & al., Soreq NRC & MBT Israel Aircraft Industries, Israel 143

Optical environment surrounding the MSX spacecraft

High-mass sensitivity miniaturised quartz crystal microbalances (QCMs) for space applications
D.A. Wallace & S.A. Wallace, QCM Research, USA 161

Posters
Outgassing studies of outer materials used on ‘Electro’ spacecraft
V.P. Khodnenko & al., NPP Institute of Electromechanics & INP/MSU, Russia 169

Expert evaluation of possible damage of the optical surfaces of T-170 space telescope
induced by spacecraft materials & space environment
V.A. Salnikov & al., Karpov Institute & Lavochkin Association, Russia 173

A new approach for an European development of high-performance QCM
S. Sekler & al., ISBE/INTEC, CSEM, Switzerland & ESA-ESTEC 179

Atomic Oxygen
Chairman : C. Durin

Utilisation of mass spectrometry for characterisation of the interaction of hyperthermal O-atom beams with materials
A. Paillous & al., ONERA-CERT & LPCE-CNRS, France 185

Development of a model of polymer interaction with fast atomic oxygen
Z. Iskanderova & al., ITL Ink & University of Toronto IAS, Canada 195

Influence of manufacture processing on polymer sample atomic oxygen erosion rates
Matcham & al., University of Southampton/DAA, UK & ESA/ESTEC 203

Posters
Hyperthermal atomic oxygen interaction with highly oriented pyrolytic graphite studied
by scanning tunneling microscopy
H. Kinoshita & al., Osaka University, Japan 211

Oxygen and VUV irradiation of polymers : atomic force microscopy (AFM) and
complementary studies
E. Grossman & al., Soreq NRC, Israel 217

Oxidation of silicon (001) surfaces by hyperthermal atomic oxygen beam at room temperature
M. Tagawa & al., Osaka University, Japan & Montana State University, USA 225
Evaluation of reaction efficiencies of polymeric materials in their interaction with fast atomic oxygen
V.E. Skurat, *Russian Academy of Sciences, Russia* 231

Atomic oxygen simulation by plasmadynamic accelerator with charge exchange
V.N. Chernik, *Moscow State University, Russia* 237

About mechanism of surface roughness development on polyimide films during anisotropic etching by fast atomic oxygen

The effect of spacecraft charging on the interaction of atomic oxygen with polymers
T. King & al., *Phillips Laboratory & University of Alabama, USA* 247

**Synergy**
*Chairman: C. Durin*

FEP teflon embrittlement on LDEF and HST
K.K. De Groh & D.C. Smith, *NASA-LRC & Cleveland State University, USA* 255

The separate and combined effects of vuv radiation and atomic oxygen on teflon FEP & SIC
V.E. Skurat & al., *Rus.Acad. Sci., Inst. of Aviation Materials, etc.* 267

**Flight Experiments**
*Chairmen: H. Babel & J. Antonenko*

Ageing of SSM-teflon coating on the sunsynchronous orbit - Spot
I. Alet & L. Barabotti, *CNES & MMS, France* 283

Post-flight analysis of the exposed materials on the EFFU
T. Fukatsu & al., *NASDA & IHI, Japan* 287

A study on polyimide MLI of the ten-month flown space flyer unit
R. Yokota & al., *ISAS, DME Gumma University & IME/Kanegafuchi Chemical, Japan* 293

The contamination environment at the Mir space station as measured during the Euromir '95 mission
C.R. Maag & al., *T&M Engineering, USA, ESA/ESTEC & Mare Crisium, UK* 301

Assement of Mir orbital station external condition using Space Shuttle photographic & video imagery
M.T. Gaunce et al., *NASA-JSC, Lockheed Martin, USA & RSC-Energia, Russia* 309

Molecular densities measured during early operations around midcourse space experiment satellite and a comparison with pre-launch models
O.M. Uy & al., *J. Hopkins Univ., Physical Sci., Arnold AFB & Aerosp., USA* 321

The attached payload facility : a technology development facility for ISS
D.E. Avery & al., *NASA-LRC, Space Tec Inc., Micro Craft Inc.& SpaceHab, USA* 331

**Posters**
QCM flight measurements of contaminant films & their effect on midcourse experiment satellite optics
B.E. Wood & al., *AEDC Group, Aerospace Corp., J. Hopkins & Utah State Univ., USA* 339
Dielectric properties-temperature monitoring of cured epoxy polymers & composites during six-year space exposure
P.G. Babayevsky & al., *Mati-T. State University, Russia & Energinya, Russia* 345

Investigation of coating degradation mechanisms on the HST spacecraft

The diagnostics of micrometeor protection for LEO stations from the results of the in-flight experiments
O. Startsev & al., *Altai State University & Salyut Design Office, Russia* 367

Study of polymer composite specimens surface changes after long-term exposure in space
R.E. Shalin & al., *Inst. of Aviation Mat. & MVK State Space Centre, Russia* 375

**Materials for Space Use**

*Chairmen: J.F. Jamer & L. Matteotti*

Space tribology activities in Japan laboratory data and flight experiment aboard SFU/EFFU-

Plasma-deposited coatings & surface fluorination for protection of spacecraft materials against atomic oxygen erosion

Erosion protection of polymer materials in space
Y. Gudimenko & al., *ITL Inc. & University of Toronto, Canada* 403

Spectrally selective thermal coatings for improved cooler performance
J. Triolo & al., *Swales & Associates & NASA-GFSC, USA* 411

Reduced glare, high diffuse reflectance teflon surfaces for improved performance of video cameras on Canadian MSS for SS Alpha
J.I. Kleiman & Y. Gudimenko, *ITL Inc. Canada* 419

Thermal control coatings under development at CNES
J.-C. Guillaumon & P. Nabarra, *CNES, France* 427

To-date spacecraft applications and demonstration testing results, and future product development for new molecular adsorber technologies

**Posters**

Surface treatments of aluminium for space applications
J.C. Puippe, *Steiger SA, Switzerland* 445

Space optical payloads – New application area for high-temperature composites
B. Capdepuy & al., *Aérospatiale Espace Défense, France* 451

Thermal control paints and various materials for space use
F. Guérard & J.C. Guillaumon, *MAP & CNES, France* 457
**Micrometeorites & Debris**  
*Chairmen: F. Levadou & D. Alwes*

Decoding the evolution of rear impact morphologies on the hubble space telescope solar array  
M.K. Herbert & al., *University of Kent, UK*  
461

Impact phenomena on brittle materials: Analysis of impact features on solar arrays  
M. Rival & al., *ONERA-CERT & CNES/CST, France*  
469

Hypervelocity impact damage to space flyer unit thermal control surfaces  
M.J. Neish & al., *NAL, ISAS, IHI & Kobe University, Japan*  
477

MOD impact damage on composite materials in space  
R.C. Tennyson & G. Shortliffe, *University of Toronto, Canada*  
485

**Poster**  
Emission and discharge phenomena induced by hard microparticle impact  
L.S. Novikov & al., *INP/MSU & Samara Aerospace University, Russia*  
493

---

**Internal Atmosphere**  
*Chairmen: M. Judd & J. Stark*

Testing of arc tracking properties of wiring insulation for space applications  
Hanson & al., *TUD, DASA-RI, Germany & ESA/ESTEC*  
499

Comparison of ESA & Russian test methods for the determination of flammability, toxicity & fungus growth characteristics of space materials  
H.J. Reher & al., *DASA-RI, DASA-RST & DARA, Germany*  
507

Biological induced corrosion of materials: New test methods & experiences from Mir station  
R. Klintworth & al., *DASA-RI, Germany, IBMP, Russia & DARA, Germany*  
513

**Poster**  
Joint US-Russian testing for track propagation  
D. Hirsch & al., *Allied Signal, Boeing D & S Group, NASA-JSC & Energia Russia*  
523

---

**Ground Testing**  
*Chairmen: M. Judd & J. Stark*

Advances in optical property measurements of spacecraft materials  
C.A. Smith & al., *MacDonnell Douglas & NASA-LRC, USA*  
531

Space environment simulation at radiation tests of materials – Draft of an international standard  
B.A. Briskman & al., *Karpov Institute & Russia Institute of Standardisation*  
537

---

**Participants**  
545
