## Contents

### Preface to the Third Edition v

#### 1 An Approach to Astrophysics 1

1:1 Channels for Astronomical Information 3
1:2 X-Ray Astronomy: Development of a New Field 5
1:3 The Appropriate Set of Physical Laws 9
1:4 The Formation of Stars 10
1:5 Evolution of Stars 13
1:6 Abundance of the Chemical Elements in Stars and the Solar System 21
1:7 Origin of the Solar System 26
1:8 The Local Group of Galaxies 35
1:9 Galaxy Formation 38
1:10 Black Holes 40
1:11 Turbulence 41
1:12 Problems of Life 42
1:13 Unobserved Astronomical Objects 44

#### 2 The Cosmic Distance Scale 49

2:1 Size of the Solar System 49
2:2 Trigonometric Parallax 50
2:3 Spectroscopic Parallax 50
2:4 The Moving Cluster Method 50
2:5 Method of Wilson and Bappu 51
2:6 Superposition of Main Sequences 53
2:7 RR Lyrae Variables 54
2:8 Cepheid Variables 54

4:16 The Saha Equation ........................................ 133
4:17 Mean Values ............................................. 134
4:18 Fluctuations .............................................. 135
4:19 The First Law of Thermodynamics ...................... 136
4:20 Isothermal and Adiabatic Processes ...................... 138
4:21 Formation of Condensations and the Stability of the Interstellar Medium ........................................ 139
4:22 Ionized Gases and Assemblies of Stars .................. 142
Answers to Selected Problems ............................... 145

5 Photons and Fast Particles ................................. 149
5:1 The Relativity Principle .................................... 149
5:2 Relativistic Terminology .................................. 150
5:3 Relative Motion ........................................... 154
5:4 Four-Vectors .............................................. 158
5:5 Aberration of Light ....................................... 160
5:6 Momentum, Mass, and Energy ............................ 162
5:7 The Doppler Effect ....................................... 164
5:8 Poynting–Robertson Drag on a Grain .................... 166
5:9 Motion Through the Cosmic Microwave Background Radiation ........................................... 167
5:10 Particles at High Energies ............................... 169
5:11 High-Energy Collisions .................................. 170
5:12 Faster-Than-Light Particles .............................. 172
5:13 Strong Gravitational Fields .............................. 174
5:14 Gravitational Time Delay; Deflection of Light ........ 178
5:15 Gravitational Lenses ..................................... 179
5:16 An Independent Measure of the Hubble Constant ...... 181
Answers to Selected Problems ............................... 182

6 Electromagnetic Processes in Space ......................... 183
6:1 Coulomb’s Law and Dielectric Displacement ............ 183
6:2 Cosmic Magnetic Fields ................................... 185
6:3 Ohm’s Law and Dissipation ................................ 187
6:4 Magnetic Acceleration of Particles ....................... 187
6:5 Ampère’s Law and the Relation Between Cosmic Currents and Magnetic Fields ........................................ 189
6:6 Magnetic Mirrors, Magnetic Bottles, and Cosmic Ray Particles ........................................... 189
6:7 Maxwell’s Equations ...................................... 192
6:8 The Wave Equation ....................................... 193
6:9 Phase and Group Velocity ................................ 195
6:10 Energy Density, Pressure, and the Poynting Vector ...... 196
6:11 Propagation of Waves Through a Tenuous Ionized Medium ........................................... 198
6:12 Faraday Rotation ......................................... 200
6:13 Light Emission by Slowly Moving Charges ............ 204
8:11 Particles and Basic Particle Interactions ................. 313
8:12 Energy-Generating Processes in Stars .................. 315
8:13 The Hertzsprung–Russell Diagram and Stellar Evolution .... 322
8:14 Evidence for Stellar Evolution, as Seen from the Surface Composition of Some Stars ................... 325
8:15 The Possibility of Direct Observations of Nuclear Processes in Stars ........................................... 329
8:16 Population III Stars ....................................... 331
8:17 Compact Stars ............................................ 332
8:18 White Dwarf Stars ....................................... 333
8:19 Supernovae; Neutron Stars, and Black Holes ............. 338
8:20 Vibration and Rotation of Stars .......................... 343
Additional Problems .......................................... 344
Answers to Problems ........................................... 346

9 Cosmic Gas and Dust ........................................ 351
9:1 Observations ............................................. 351
9:2 Strömgren Spheres ........................................ 360
9:3 Pressure Propagation and the Speed of Sound ............... 365
9:4 Shock Fronts and Ionization Fronts ......................... 367
9:5 Origin of Cosmic Magnetic Fields .......................... 373
9:6 Dynamo Amplification of Magnetic Fields ................... 377
9:7 Cosmic Ray Particles in the Interstellar Medium ........... 379
9:8 Formation of Molecules and Grains ........................ 384
9:9 Infrared Emission from Galactic Sources ................... 388
9:10 Polycyclic Aromatic Hydrocarbons ........................ 390
9:11 Heating and Cooling by Grains ............................ 392
9:12 Orientation of Interstellar Grains ........................ 394
9:13 Dark Matter ............................................. 400
Additional Problems .......................................... 403
Answers to Selected Problems ................................. 403

10:1 Star Formation .......................................... 407
10:2 Gravitational Condensation of Matter ....................... 409
10:3 Jeans Criterion .......................................... 410
10:4 Hydrostatics of Gaseous Clouds ........................... 413
10:5 Ambipolar Diffusion ..................................... 413
10:6 Triggered Collapse ....................................... 415
10:7 Energy Dissipation ....................................... 416
10:8 Cooling of Dense Clouds by Grain Radiation ............... 419
10:9 Condensation in the Early Solar Nebula .................... 423
10:10 The Evidence Provided by Meteorites ..................... 427
10:11 Formation of Primitive Condensates in the Early Solar Nebula .............................................. 431
10:12 Formation of Planetesimals 432
10:13 Condensation in the Primeval Solar Nebula 434
Answers to Selected Problems 436

11 The Universe We Inhabit 439
11:1 Questions About the Universe 439
11:2 Isotropy and Homogeneity of the Universe 440
11:3 Cosmological Principle 441
11:4 Homogeneous Isotropic Models of the Universe 443
11:5 Measuring the Geometric Properties of the Universe 447
11:6 Topology of the Universe 455
11:7 Dynamics on a Cosmic Scale 457
11:8 Some Simple Models of the Universe 457
11:9 The Einstein Equations 460
11:10 Self-Regenerating Universes 462
11:11 Olbers's Paradox 463
11:12 Horizon of a Universe 465
11:13 Bulging 467
11:14 Cosmological Models with Matter and Antimatter 469
11:15 Do the Constants of Nature Change with Time? 470
11:16 The Flow of Time 474
Answers to Selected Problems 478

12 The Early Universe 483
12:1 Background Radiation 483
12:2 Background Contributions of Discrete Sources 485
12:3 Cool Expanding Universe 488
12:4 Extrapolating Back to Early Epochs 489
12:5 The Isotropy Problem 492
12:6 The Density Parameter $\Omega$ 493
12:7 Hot Exploding Universe 494
12:8 The Flatness Problem 496
12:9 The Planck Era 497
12:10 Inflationary Cosmological Models 499
12:11 The Matter–Antimatter Asymmetry 503
12:12 The Post-Inflationary Stage 503
12:13 The Entropy of the Universe 504
12:14 Early Element Formation 505
12:15 How Hot Was the Early Universe? 508
12:16 Galaxy Formation 510
Answers to Problems 510

13 Origins of Structure 513
13:1 The Inhomogeneous Universe 513
13:2 A Swiss-Cheese Model 514
13:3 Birkhoff’s Theorem ........................................ 519
13:4 Embeddings .................................................. 519
13:5 Estimates of the Density Parameter $\Omega_0$ ............... 522
13:6 Looking Back in Time ..................................... 524
13:7 Inhomogeneities in the Microwave Background Radiation . . 524
13:8 The Inflationary Era ........................................ 527
  13:8.1 The Very Earliest Times ............................... 528
  13:8.2 The Post-Inflationary Phase Transition ............... 529
13:9 Inflationary Origins of Structure .......................... 531
13:10 The Nature of Dark Matter ................................ 533
13:11 Primordial Black Holes .................................... 535
13:12 Physical Conditions at Galaxy Formation .................. 537
13:13 The Decoupling Era ......................................... 538
13:14 Photon Drag ................................................ 538
13:15 Oscillations Before Decoupling ............................ 539
13:16 Condensation on Superhorizon Scales ...................... 540
13:17 Condensation on Subhorizon Scales ....................... 542
13:18 Formation of Sheets of Galaxies .......................... 543
13:19 Localized Coupling and Condensation ..................... 544
13:20 Accretion onto Galaxy-Forming Seeds ..................... 546
13:21 Inflationary–Lemaître Universes .......................... 549
13:22 Last Impact and Decoupling of Matter from Radiation .... 551
13:23 Heating of Gas After Decoupling .......................... 551
13:24 Protogalactic Cooling ...................................... 552
13:25 Formation of Our Own Galaxy .............................. 552
13:26 Growth Through Merging ................................... 555
13:27 Final Thoughts ............................................. 556
Answers to Selected Problems .................................. 556

14 Life in the Universe ........................................ 559
  14:1 Introduction ............................................... 559
  14:2 Thermodynamics of Biological Systems ................... 559
  14:3 Organic Molecules in Nature and in the Laboratory ........ 561
  14:4 Origins of Life on Earth .................................. 564
  14:5 The Chemical Basis of Terrestrial Life .................... 565
  14:6 Laboratory Syntheses ...................................... 567
  14:7 Panspermia ................................................ 567
  14:8 Higher Organisms and Intelligence ........................ 568
  14:9 Communication and Space Travel .......................... 568
 Problem 14-2 Answer ........................................... 570

Epilogue .................................................................. 573

Appendix A: Astronomical Terminology .................. 575
  A:1 Introduction ............................................... 575
