Contents

Preface	xi
Acknowledgements	xiii
1 Introduction	1
1.1 Statistics in Greek and Renaissance astronomy	1
1.2 Celestial Mechanics and the rise of mathematical statistics	3
1.3 Contemporary links between astronomy and statistics	4
1.4 Statistical consulting and software	6
2 Overview of astronomy	11
2.1 Units, nomenclature, catalogs and telescopes	12
2.2 Stars	15
2.3 The Galaxy	21
2.4 Extragalactic astronomy and cosmology	28
3 The character of astronomical data	37
3.1 Types of astronomical data	37
3.2 Astronomical measurement errors	42
3.3 Summary	46
4 Overview of statistics	49
4.1 Exploratory data analysis	51
4.2 Probability distributions	54
4.3 Estimation	58
4.4 Hypothesis testing	61
4.5 Nonparametric tests	63
4.6 Multivariate analysis	69
4.7 Time series analysis	75
4.8 Spatial statistics	80

4.9	Wavelets	83
4.10	Density estimation	85
4.11	Sampling designs	88
5	Resampling methods	93
5.1	Description of the bootstrap method	95
5.2	Some simple applications	96
5.3	Estimating the sampling distribution	97
5.4	Bootstrap confidence intervals	99
5.5	Bootstrap for regression models	100
5.6	Summary	102
6	Spatial statistics	105
6.1	Recent astronomical problems	106
6.2	Spatial distribution of galaxies	107
6.3	Sources in photon-counting detectors	113
6.4	Gamma-ray burst distributions	116
6.5	Summary	117
7	Linear regression	119
7.1	Introduction	119
7.2	Recent examples from the astronomical literature	120
7.3	Unweighted least squares lines	121
7.4	Errors-in-variables models	123
7.5	Summary	127
8	Multivariate classification and analysis	129
8.1	Some multivariate problems in astronomy	130
8.2	Applications of multivariate methods	134
8.3	Some new methods	138
8.4	Multivariate classification	142
8.5	Multivariate statistical software	145
8.6	Summary	146
9	Time series analysis	149
9.1	Variable phenomena in astronomy	149
9.2	Examples of astronomical time series	155
9.3	Periodicities in irregularly-spaced observations	160
9.4	Computer software	164
9.5	Summary	165
10	Censoring and truncation	167
10.1	Recent research problems	168
10.2	Statistics for censored data	170

10.3 Statistical methods for truncated data	175
10.4 Software	180
10.5 Summary	181
11 Some astronomical controversies	183
11.1 Tifft's quantized redshifts	183
11.2 Arp's quasar alignments	187
11.3 Segal's chronometric cosmology	191
11.4 Gott's longevity of civilizations	193
References	197
Index	217
