Preface xi

Chapter 1. Functions of a Complex Variable 1
  1.1. Complex numbers 1
  Exercises for Section 1.1 12
  1.2. Continuity in the complex plane 16
  Exercises for Section 1.2 23
  1.3. Functions of a complex variable 25
  Exercises for Section 1.3 29
  1.4. Analytic functions 31
  Exercises for Section 1.4 39
  1.5. Elementary analytic functions 40
  Exercises for Section 1.5 48

Chapter 2. Elementary Conformal Mappings 51
  2.1. Geometric meaning of $f'(z)$ 51
  2.2. Basic problems and principles of conformal mappings 54
  Exercises for Sections 2.1 and 2.2 57
  2.3. Linear mapping and inversion 59
  Exercises for Section 2.3 64
  2.4. Linear fractional transformations 66
  Exercises for Section 2.4 74
  2.5. Symmetry and linear fractional transformations 75
  Exercises for Section 2.5 79
  2.6. Mapping by $z^n$ and $w = z^{1/n}$ 79
  Exercises for Section 2.6 91
  2.7. Exponential and logarithmic mappings 92
  Exercises for Section 2.7 99
  2.8. Mapping by Joukowsky's function 100
  2.9. Mapping by trigonometric functions 109
  Exercises for Sections 2.8 and 2.9 111
Chapter 3. Complex Integration and Cauchy's Theorem

3.1. Paths in the complex plane
3.2. Complex line integrals
Exercises for Section 3.2
3.3. Cauchy’s Theorem
Exercises for Section 3.3
3.4. Cauchy’s integral formula and applications
Exercises for Section 3.4
3.5. Goursat’s Theorem

Chapter 4. Taylor and Laurent Series

4.1. Infinite series
Exercises for Section 4.1
4.2. Integer power series
Exercises for Section 4.2
4.3. Taylor series
Exercises for Section 4.3
4.4. Laurent series
Exercises for Section 4.4

Chapter 5. Singular Points and the Residue Theorem

5.1. Singular points of analytic functions
Exercises for Section 5.1
5.2. The residue theorem
Exercises for Section 5.2

Chapter 6. Elementary Definite Integrals

6.1. Rational functions over $(−\infty, +\infty)$
6.2. Rational functions times sine or cosine
6.3. Rational functions times exponential functions
6.4. Rational functions times a power of $x$
Exercises for Chapter 6

Chapter 7. Intermediate Definite Integrals

7.1. Rational functions over $(0, +\infty)$
7.2. Forms containing $(\ln x)^p$ in the numerator
7.3. Forms containing $\ln g(x)$ or $\arctan g(x)$
7.4. Forms containing $\ln$ in the denominator
7.5. Forms containing $P_n(e^x)/Q_m(e^x)$
7.6. Poisson's integral
7.7. Fresnel integrals
Exercises for Chapter 7
CONTENTS

Answers to Odd Exercises for Section 1.5 449
Answers to Odd Exercises for Sections 2.1 and 2.2 450
Answers to Odd Exercises for Section 2.3 451
Answers to Odd Exercises for Section 2.4 452
Answers to Odd Exercises for Section 2.5 453
Answers to Odd Exercises for Section 2.6 453
Answers to Odd Exercises for Section 2.7 454
Answers to Odd Exercises for Sections 2.8 and 2.9 454
Answers to Odd Exercises for Section 3.2 455
Answers to Odd Exercises for Section 3.3 455
Answers to Odd Exercises for Section 3.4 456
Answers to Odd Exercises for Section 4.1 457
Answers to Odd Exercises for Section 4.2 458
Answers to Odd Exercises for Section 4.3 458
Answers to Odd Exercises for Section 4.4 459
Answers to Odd Exercises for Section 5.1 461
Answers to Odd Exercises for Section 5.2 462
Answers to Odd Exercises for Chapter 6 464
Answers to Odd Exercises for Chapter 7 464
Answers to Odd Exercises for Chapter 8 465
Answers to Odd Exercises for Sections 9.2 and 9.3 465
Answers to Odd Exercises for Sections 9.4 and 9.5 466
Answers to Odd Exercises for Chapter 10 466
