# Moduli of Curves

Springer

# Contents

Preface	vii
<b>1 Parameter spaces: constructions and examples</b>	<b>1</b>
A Parameters and moduli	1
B Construction of the Hilbert scheme	5
C Tangent space to the Hilbert scheme	12
D Extrinsic pathologies	18
Mumford's example	19
Other examples	24
E Dimension of the Hilbert scheme	26
F Severi varieties	29
G Hurwitz schemes	32
<b>2 Basic facts about moduli spaces of curves</b>	<b>35</b>
A Why do fine moduli spaces of curves not exist?	35
B Moduli spaces we'll be concerned with	40
C Constructions of $\mathcal{M}_g$	43
The Teichmüller approach	43
The Hodge theory approach	44
The geometric invariant theory (G.I.T.) approach	46
D Geometric and topological properties	52
Basic properties	52
Local properties	52
Complete subvarieties of $\mathcal{M}_g$	55
Cohomology of $\mathcal{M}_g$ : Harer's theorems	58
Cohomology of the universal curve	62
Cohomology of Hilbert schemes	63
Structure of the tautological ring	67
Witten's conjectures and Kontsevich's theorem	71
E Moduli spaces of stable maps	76
<b>3 Techniques</b>	<b>81</b>
A Basic facts about nodal and stable curves	81
Dualizing sheaves	82

	Automorphisms . . . . .	85
B	Deformation theory . . . . .	86
	Overview . . . . .	86
	Deformations of smooth curves . . . . .	89
	Variations on the basic deformation theory plan . . . . .	92
	Universal deformations of stable curves . . . . .	102
	Deformations of maps . . . . .	105
C	Stable reduction . . . . .	117
	Results . . . . .	117
	Examples . . . . .	120
D	Interlude: calculations on the moduli stack . . . . .	139
	Divisor classes on the moduli stack . . . . .	140
	Existence of tautological families . . . . .	148
E	Grothendieck-Riemann-Roch and Porteous . . . . .	150
	Grothendieck-Riemann-Roch . . . . .	150
	Chern classes of the Hodge bundle . . . . .	154
	Chern class of the tangent bundle . . . . .	159
	Porteous' formula . . . . .	161
	The hyperelliptic locus in $\mathcal{M}_3$ . . . . .	162
	Relations amongst standard cohomology classes . . . . .	165
	Divisor classes on Hilbert schemes . . . . .	166
F	Test curves: the hyperelliptic locus in $\overline{\mathcal{M}}_3$ begun . . . . .	168
G	Admissible covers . . . . .	175
H	The hyperelliptic locus in $\overline{\mathcal{M}}_3$ completed . . . . .	186
<b>4</b>	<b>Construction of <math>\overline{\mathcal{M}}_g</math></b> . . . . .	<b>191</b>
A	Background on geometric invariant theory . . . . .	192
	The G.I.T. strategy . . . . .	192
	Finite generation of and separation by invariants . . . . .	194
	The numerical criterion . . . . .	199
	Stability of plane curves . . . . .	202
B	Stability of Hilbert points of smooth curves . . . . .	206
	The numerical criterion for Hilbert points . . . . .	206
	Gieseker's criterion . . . . .	211
	Stability of smooth curves . . . . .	216
C	Construction of $\overline{\mathcal{M}}_g$ via the Potential Stability Theorem . . . . .	220
	The plan of the construction and a few corollaries . . . . .	220
	The Potential Stability Theorem . . . . .	224
<b>5</b>	<b>Limit Linear Series and Brill-Noether theory</b> . . . . .	<b>240</b>
A	Introductory remarks on degenerations . . . . .	240
B	Limits of line bundles . . . . .	247
C	Limits of linear series: motivation and examples . . . . .	253
D	Limit linear series: definitions and applications . . . . .	263
	Limit linear series . . . . .	263

	Smoothing limit linear series . . . . .	266
	Limits of canonical series and Weierstrass points . . .	269
E	Limit linear series on flag curves . . . . .	274
	Inequalities on vanishing sequences . . . . .	274
	The case $\rho = 0$ . . . . .	276
	Proof of the Gieseker-Petri theorem . . . . .	280
<b>6</b>	<b>Geometry of moduli spaces: selected results</b>	<b>286</b>
A	Irreducibility of the moduli space of curves . . . . .	286
B	Diaz' theorem . . . . .	288
	The idea: stratifying the moduli space . . . . .	288
	The proof . . . . .	292
C	Moduli of hyperelliptic curves . . . . .	293
	Fiddling around . . . . .	293
	The calculation for an (almost) arbitrary family . . . .	295
	The Picard group of the hyperelliptic locus . . . . .	301
D	Ample divisors on $\overline{\mathcal{M}}_g$ . . . . .	303
	An inequality for generically Hilbert stable families .	304
	Proof of the theorem . . . . .	305
	An inequality for families of pointed curves . . . . .	308
	Ample divisors on $\overline{\mathcal{M}}_g$ . . . . .	310
E	Irreducibility of the Severi varieties . . . . .	313
	Initial reductions . . . . .	314
	Analyzing a degeneration . . . . .	320
	An example . . . . .	324
	Completing the argument . . . . .	326
F	Kodaira dimension of $\mathcal{M}_g$ . . . . .	328
	Writing down general curves . . . . .	328
	Basic ideas . . . . .	330
	Pulling back the divisors $D'_5$ . . . . .	335
	Divisors on $\overline{\mathcal{M}}_g$ that miss $j(\overline{\mathcal{M}}_{2,1} \setminus W)$ . . . . .	336
	Divisors on $\mathcal{M}_g$ that miss $i(\overline{\mathcal{M}}_{0,g})$ . . . . .	340
	Further divisor class calculations . . . . .	342
	Curves defined over $\mathbb{Q}$ . . . . .	342
	<b>Bibliography</b>	<b>345</b>
	<b>Index</b>	<b>355</b>
