Contents

1. Plantations for the Tropics—Their Role, Extent and Nature ........................................... 1
   A.G. Brown, E.K.S. Nambiar and C. Cossalter
   The Global Demand for Wood .................. 3
   Demands on Tropical Forests .................. 7
   Plantation Forests in the Tropics .......... 8
   The Challenge .................................. 19

2. Genetic Resources for Plantation Forestry .......... 25
   T.J.B. Boyle, C. Cossalter and A.R. Griffin
   Genetic Resources in Tropical Plantation Forestry .......... 26
   Genetics and Genetic Variation ............ 29
   Tree Improvement Strategies .......... 38
   Breeding and Propagation Strategies ....... 38
   Significance of Water Use and Nutrient Use Efficiency in Adaptation ...... 46
   Selection Methods for Water-use and Nutrient-use Efficiency ...... 49
   Synthesis .................................. 56

3. The Biophysical Environment .................... 65
   J.J. Landsberg
   The Atmospheric Environment ............ 67
   Canopy Architecture .................... 70
   Micrometeorological Processes .......... 73
   Plantation Productivity ................. 88
   Synthesis .................................. 92

4. Soils of the Tropics and Their Management for Plantation Forestry .................. 97
   R. Lal
   Soils of the Tropics ................. 98
   Soil Requirements for Plantation Forestry ....... 110
   Physical Properties of Major Soils of the Tropics .......... 111
   Soil Erodibility and Erosion .......... 115
   Erosion Control ...................... 117
   Synthesis .................................. 119

5. Hydrology of Forest Plantations in the Tropics .......... 125
   L.A. (Sampurmo) Bruijnzeel
   The Forest Hydrological Cycle ............ 126
   Hydrology of Forest Plantations .......... 130
   Plantation Management and Hydrology .......... 151
   The Role of Hydrological Modelling in Plantation Management ...... 156
   Synthesis .................................. 157
11. Soil and Stand Management for Short-rotation Plantations .......................... 379
J.L.M. Gonçalves, N.F. Barros, E.K.S. Nambiar and R.F. Novais
Water Availability ................................................. 380
Nutrient Supply, Uptake and Tree Growth .................................. 385
Constraints on Production ................................................ 395
Nutrient Amendments and Correction of Nutrient Deficiency .......... 401
Synthesis .......................................................... 411

12. Stand Development and Productivity ................................. 419
D. Binkley, A.M. O'Connell and K.V. Sankaran
Definition and Measurement of Productivity ................................ 420
Patterns of Stand Growth .................................................... 423
Nutritional Factors Controlling Stand Growth ............................... 432
Synthesis .......................................................... 438

A.M. O'Connell and K.V. Sankaran
Litter Accumulation ..................................................... 446
Litter Decomposition ..................................................... 453
Effect of Litter on Soil ..................................................... 461
Interpretation of Accumulation, Decay and Mineralisation Processes ..................................................... 463
Management of Litter and Soil Organic Matter in Tropical Plantations ..................................................... 467
Synthesis .......................................................... 471

14. Reforestation of Salt-affected and Acid Soils ......................... 481
N.E. Marcar and P. K. Khanna
Reforestation of Salt-affected Land ........................................ 483
Reforestation of Acid Soils ................................................ 506
Synthesis .......................................................... 516

15. Towards Sustained Productivity of Tropical Plantations: Science and Practice .......................................... 527
E.K.S. Nambiar and A.G. Brown
Sustainability in Context .................................................... 528
The Biological Basis of Productivity ........................................ 532
Managing Productivity ...................................................... 540
Plantations, Water and Land Use ........................................ 548
The Way Forward .......................................................... 549
Conclusion ............................................................ 553

Index .............................................................. 559
