River Ecology and Management
Lessons from the Pacific Coastal Ecoregion

Sylvia Kantor
Associate and Managing Editor

With 202 Illustrations
Contents

Preface .................................................. v
Contributors ........................................... xxxi

1 River Ecology and Management in
the Pacific Coastal Ecoregion ......................... 1
Robert J. Naiman and Robert E. Bilby

Defining Streams and Rivers ............................ 1
A Brief History of Stream Ecology ...................... 1
Recent Advances in Stream Ecology .................... 2
  Rivers as Integrators of Environmental Conditions .... 3
  Environmental Status of Streams and Rivers .......... 4
Providing a Sense of Place ................................ 5
  The Pacific Northwest .................................. 5
  The Pacific Coastal Ecoregion ......................... 7
Science and Management .................................. 8

Part I The Physical Environment

2 Channel Processes, Classification, and Response .......... 13
David R. Montgomery and John M. Buffington

Overview ............................................... 13
Introduction ......................................... 13
Channel Processes ................................... 14
Conceptual Models of Channel Response ................. 16
Examples of Channel Change ............................ 17
  Sediment Supply .................................. 17
  Discharge ......................................... 19
  Dams ............................................... 19
Geomorphological Channel Classification ................. 20
  Past Classifications ................................ 20
  Hierarchical Channel Classification .................. 21
Channel Disturbance and Response Potential ............... 31
  Reach-Level Response ............................... 31

6 Microorganisms and Organic Matter Decomposition .......................... 120
Keller F. Suberkropp

Overview ....................................................... 120
Introduction .................................................... 120
Heterotrophic Microorganisms .................................... 122
Plant Litter Decomposition ...................................... 127
Models for Plant Litter Decomposition ....................... 131
Comparison of Fungal and Bacterial Activity ............... 132
Fungi-Shredder Interactions .................................. 133
Factors Affecting Rates of Plant Litter Breakdown .......... 134
Wood .......................................................... 135
Dissolved Organic Matter ...................................... 137
Metabolism of DOM and the Microbial Loop ................ 137

7 Primary Production ........................................... 144
Michael L. Murphy

Overview ....................................................... 144
Introduction .................................................... 144
Forms and Typical Species ...................................... 145
Benthic Algae .................................................. 145
Macrophytes .................................................... 148
Phytoplankton .................................................. 149
The Primary Production Process ................................ 149
Limiting Factors ................................................. 150
Energy Flow ...................................................... 153
Distribution of Primary Production in Watersheds .......... 158
Potential Response to Watershed Uses .................... 160

8 Stream Macroinvertebrate Communities ......................... 169
Anne E. Hershey and Gary A. Lamberti

Overview ....................................................... 169
Introduction .................................................... 169
Species Assemblages ............................................ 170
Macrobenthic Taxonomic Diversity ......................... 170
Macroinvertebrate Life Histories ............................. 172
Relationship of Diversity to Physical Environment ......... 175
Role of Disturbance ............................................ 176
Functional Feeding Groups and the River Continuum Concept .......................... 179
Invertebrate-Mediated Processes ............................. 183
Detritivory ...................................................... 183
Grazing .......................................................... 184
Predator-Prey Interactions .................................... 185
Macroinvertebrate Drift ....................................... 187
Secondary Production ......................................... 189
Macroinvertebrates in Stream Food Webs .................... 189
Impact of Spawning Salmon on Stream ...................... 189
Macroinvertebrates ............................................ 192
Effects of Land Use on Community Dynamics ................ 192
9 Fish Communities ............................... 200

Gordon H. Reeves, Peter A. Bisson, and Jeffrey M. Dambacher

Overview ........................................... 200
Introduction ....................................... 200
Regional Diversity .............................. 201
   Anadromous Life Histories ................... 205
   Population Variability ....................... 206
Watershed Scale Patterns of Diversity .......... 208
   Ecological Rules ............................... 208
   Physical and Biological Processes .......... 209
Reach Scale Diversity ........................... 214
Habitat Unit Patterns of Diversity ............. 218
Human Impacts on Fish .......................... 220
   Differential Response of Species .......... 222
   Disturbance ................................. 224
   Future Management Directions ............. 226

10 Riparian Wildlife ............................ 235

Kathryn A. Kelsey and Steven D. West

Overview ........................................... 235
Introduction ....................................... 235
Distribution and Abundance of Riparian Wildlife Species ..... 236
   Riparian Obligates ............................ 236
   Riparian Generalists ......................... 241
   Exotic Species ............................... 242
Effects of Riparian Conditions and Processes on Wildlife ..... 243
   Landscape Processes ........................ 243
   Local Processes .............................. 245
Management Effects on Riparian Wildlife Communities ....... 250
   Riparian Wildlife Management Alternatives 252

Part III  Ecosystem Processes

11 Dynamic Landscape Systems .................. 261

Lee E. Benda, Daniel J. Miller, Thomas Dunne, Gordon H. Reeves, and James K. Agee

Overview ........................................... 261
Introduction ....................................... 261
Components of Dynamic Landscape Systems ............... 263
   Climate ....................................... 263
   Topography ................................... 268
   Hierarchical Patterns of Channel Networks ...... 272
   Basin History .................................. 273
Dynamic Landscape Systems: Populations of Elements and Time 274
   Temporal Sequencing of Storms, Fires, and Floods, and Dynamic Channel Behavior 274
   Effect of Hierarchical Networks and Spatial Scale on System Properties 277
Aquatic Biology at the Landscape Systems Level  281
Applications to Watershed Science and Management  283
A Field Perspective  283
The Problem of Cumulative Effects, Natural Disturbance, and Habitat Diversity  284

12 Riparian Forests  289
Robert J. Naiman, Kevin L. Fetherston, Steven J. McKay, and Jiquan Chen
Overview  289
Introduction  290
The Physical Setting and Geomorphic Context  292
Valley Morphology  294
Hillslope Processes  294
Fluvial Processes  296
Soil Processes  296
Large Woody Debris  296
Riparian Plant Adaptations  297
Morphological and Physiological Adaptations  299
Reproductive Strategies  299
Growth Dynamics  301
Spatial Patterns of Riparian Forests: A Mosaic  302
Disturbance  302
Successional Processes  304
Case Studies  304
Riparian Forests and Ecosystem Functions  310
Riparian Forest Microclimate  310
Riparian Plant Diversity  311
Riparian Forests and Land-Use Change  311
River Regulation  311
Forest Practices  317
Lessons for Management  318

13 Function and Distribution of Large Woody Debris  324
Robert E. Bilby and Peter A. Bisson
Overview  324
Introduction  324
Abundance and Distribution of LWD in Channel Networks  325
Processes Controlling Input and Output of LWD  327
LWD Function in Stream Ecosystems  331
Influence of Land Use on LWD  338

14 Nutrient Cycles and Responses to Disturbance  347
Michael E. McClain, Robert E. Bilby, and Frank J. Triska
Overview  347
Introduction  348
The Basics of Nitrogen, Phosphorus, and Sulfur Cycling  349
Nutrient Spiraling  349
Natural Forms, Distributions, and Transformations  351
Input-Output Pathways and Riverine Budgets  354
## Controlling Variables in Nitrogen, Phosphorus, and Sulfur Cycling

- Hydrologic Regime ........................................ 357
- Temperature ................................................. 359
- Biological Community Composition ..................... 359

## Responses to Disturbance

- Forest Conversion and Management ..................... 363
- Urbanization and Agriculture ............................ 367
- Fire .............................................................. 367
- Climate Change .............................................. 367

### 15 Organic Matter and Trophic Dynamics

*Peter A. Bisson and Robert E. Bilby*

- Overview ...................................................... 373
- Introduction ............................................... 373
- Trophic Pathways .......................................... 377
  - Autotrophic Production .................................. 377
  - Allochthonous Organic Matter and Heterotrophic Production ........ 379
- Organic Matter Processing ................................ 380
- Organic Matter Storage and Nutrient Spiraling .......... 384
- Impacts of Human Activity ................................ 386
  - Human Activities and Cascading Trophic Systems .......... 386
  - Loss of Riparian Vegetation ............................. 388
  - Loss of Salmon Carcasses ................................ 389
- Why Are Some Streams More Productive Than Others? .... 391

### 16 The Hyporheic Zone

*Richard T. Edwards*

- Overview ...................................................... 399
- Introduction ............................................... 399
- Definition and Delineation ................................ 401
- Interstitial Volume and Surface Area .................... 404
- Hydrology of Hyporheic Interactions .................... 405
- Hyporheic Zone Distribution Patterns ................... 408
  - Large-Scale Geologic Factors .......................... 408
  - Watershed and Valley Segment Scales .................. 409
- Channel Reach Scale ....................................... 410
- Channel Unit Scale ........................................ 410
- Roughness Elements Scale ................................ 411
- Spatial Scales of Management Actions ................... 411
- Temporal Scales ............................................ 412
- Biogeochemical Processes ................................. 412
  - Transient Storage ....................................... 412
  - Nitrogen Dynamics ....................................... 413
  - Organic Matter Utilization and the Role of Epilithon .... 417
- Ecology and Structure of Hyporheic Invertebrate Communities .......... 419
  - Controls on Community Structure ........................ 421
  - Food Sources and Trophic Structure .................... 421
  - Epilithic Biofilms ...................................... 422
  - Secondary Production ................................... 423
Contents

Implications for Management of Coastal Rivers of Washington 423

17 Biodiversity 430

Michael M. Pollock

Overview 430
Introduction 430
An Overview of Diversity in Riparian Corridors 431
General Theories of (Local) Diversity 432
Common Measures of Species Richness, Diversity, Evenness, and Turnover Rates 434
Describing Diversity at Multiple Spatial Scales 436
Natural Processes Influencing Biodiversity Patterns 438
Hydrologic Regimes 440
Herbivory 443
Productivity 444
Habitat Heterogeneity 444
Large-Scale Spatial Heterogeneity 446
Implications for Management 448

Part IV Management

18 Statistical Design and Analysis Considerations for Monitoring and Assessment 455

Loveday L. Conquest and Stephen C. Ralph

Overview 455
Introduction 456
Sampling Design 456
Sampling Approaches and Sampling Units 457
Replication 461
Reference Sites 461
The Issue of Scale 462
When $n$ Equals One—The Argument for Case Studies 463
Choosing Parameters 464
Acquiring and Maintaining Good Data 466
Intensive and Extensive Approaches 466
Training Field Crews 466
Quality Control and Quality Assurance 467
Management of Information 467
Data Analysis 468
Parametric Procedures, Regression and Correlation, and Nonparametric Tests 468
Multivariate Procedures 470
Exploratory Data Analysis 471
Geographic Information Systems 471

19 Cumulative Watershed Effects and Watershed Analysis 476

Leslie M. Reid

Overview 476
Introduction 477
Problems in the Evaluation of Cumulative Watershed Effects ........................................ 479
Technical Issues ............................................................................ 480
Philosophical Issues .................................................................... 481
Sociocultural Issues ...................................................................... 483
The Ad Hoc Approach to Cumulative Effects Evaluation ............. 485
Standardized Methods of Cumulative Effects Analysis ................. 488
An Index Approach: Equivalent Roaded Acres ............................. 489
A Mechanistic Impact Model: The Fish-Sediment Model ............. 491
Professional Judgment: The California Checklist ....................... 491
Administrative Convenience Versus Technical Adequacy .......... 492
Watershed Analysis ..................................................................... 493
Limited Assessment with Prescriptions—Timber/Fish/Wildlife
Watershed Analysis ..................................................................... 493
Broad Assessment Without Prescriptions—Interagency
Ecosystem Analysis ........................................................................ 494
Contrasting Goals and Methods .................................................. 496
Administrative Convenience Versus Technical Adequacy .......... 496
Tomorrow’s Analyses .................................................................... 498

20  Rivers as Sentinels: Using the Biology of Rivers to Guide Landscape Management .................. 502
  James R. Karr

Overview .......................................................................................... 502
Introduction ..................................................................................... 503
Rivers as Sentinels .......................................................................... 503
Biological Integrity and Cumulative Effects ................................. 505
Evolution of Biological Monitoring ............................................. 506
The Index of Biological Integrity .................................................... 509
  Selecting IBI Metrics ................................................................... 510
  Scoring Metrics ........................................................................... 513
  Integrating Multiple Metrics ....................................................... 513
What IBI Says About Streams and Watersheds ......................... 515
  Detecting the Effects of Point Source Pollution ......................... 515
  Identifying Multiple Sources of Degradation ........................... 515
  Describing Geographic Pattern and Detecting Cause ............... 517
  Detecting Regional Variation in Human Influence ................... 517
  Detecting Change Over Time as Human Activity Changes .......... 517
  Evaluating Management Efforts ................................................. 517
  Statistical Power and Precision of IBI ........................................... 520
A Benthic IBI for the Pacific Northwest ...................................... 520
Change and Risk Assessment ......................................................... 523

21  Social Organizations and Institutions .......................................... 529
  Margaret A. Shannon

Overview .......................................................................................... 529
Introduction ..................................................................................... 530
A Drop of Water ............................................................................ 531
Thinking Like Scientists and Managers ....................................... 532
Key Concepts Defined .................................................................... 533
22 River Law .......................................................... 553
Robert J. Masonis and F. Lorraine Bodi

Overview .............................................................. 553
Introduction .......................................................... 553
Sources of Law ....................................................... 554
Federal and State Jurisdiction ..................................... 555
Laws Regulating River Systems .................................... 555
Water Quantity (In-Stream Flows) ................................. 556
Water Quality ........................................................ 558
Land Use ............................................................. 560
Biota and Habitat—Endangered Species Act ..................... 565
New Approaches ...................................................... 566
Linking Water Quality and Water Quantity ....................... 566
Controlling Nonpoint Source Pollution ......................... 567
Improving Environmental Protection Under the Federal Power Act ............................. 567
Future Outlook ....................................................... 568

23 Economic Perspectives ........................................... 572
Daniel Huppert and Sylvia Kantor

Overview .............................................................. 572
Introduction .......................................................... 573
Economics and Water Resources ................................. 573
Historical Perspectives ............................................. 576
Defining and Measuring Economic Value ......................... 576
Individual Values—Compensating and Equivalent Variations .............................................. 577
Categories of Economic Value ..................................... 579
Aggregation into “Social Value” ................................... 581
Discounting and Aggregation over Time ......................... 581
Economic Benefits and Competitive Markets .................... 582
Measuring Nonmarket Economic Values ......................... 584
The Role of Economics in Decision Making ...................... 585
Economic Impacts of Policy Decisions ............................ 585
Impact versus Benefits ............................................. 586
Economic Assessment of Water Resources ....................... 587
Economics and the Ecology of River Management ................ 589
Forest Practices and Salmon Fishing ............................ 590
In-Stream Flow and Recreational Values ......................... 590
Sediment from Agriculture ........................................ 591
Part V  The Future

24  Stream and Watershed Restoration  .........................  599
    Christopher A. Frissell and Stephen C. Ralph

Overview .........................................................  599
Introduction .....................................................  599
Defining Restoration—Scope and Scale  ...................  601
Interventions at the Microhabitat Scale ..................  603
Large-Scale River Restoration  .....................  606
Watershed-Scale Restoration—An Example ..........  609
Monitoring and Evaluating Restoration Projects ..........  610
A Nested Experimental Design for Monitoring ..........  613
Cost Accounting for Watershed Restoration ................  614
Watershed Restoration and Adaptive Ecosystem
Management .....................................................  617
Elements of Successful Restoration and Monitoring ....  619

25  Nonprofit Organizations and
Watershed Management ...........................................  625
    Bettina von Hagen, Spencer Beebe, Peter Schoonmaker,
    and Erin Kellogg

Overview .........................................................  625
Introduction .....................................................  626
Theories of Nonprofit Formation ......................  626
The Limits of Government .....................................  627
The Hidden Costs of Profit-Seeking .................  629
The Emergence of Nonprofits .............................  629
Adapting Developing World Strategies to the Pacific
Coastal Ecoregion .............................................  631
The Role of Nonprofits in Watershed Management ........  632
Social and Economic Aspects of the
Pacific Coastal Ecoregion ..................................  632
Nonprofits Building Institutional Capacity ...........  633
Nonprofits Providing Access to Information ............  634
Nonprofits Restoring Degraded Watersheds ............  635
Nonprofits Promoting Market Incentives for
Watershed Conservation ................................  635
The Future of Nonprofit Organizations .................  638

26  Watershed Management ...........................................  642
    Robert J. Naiman, Peter A. Bisson, Robert G. Lee,
    and Monica G. Turner

Overview .........................................................  642
Introduction .....................................................  642
Fundamental Elements of Watershed Management ........  643
The Natural System: Variability in Time and Space ....  643
A Holistic Perspective: Persistence and Invasiveness ...  644
Connectivity and Uncertainty .............................  645
Human Cultures and Institutions .......................  646
## Contents

**Practical Approaches for Implementing Watershed Management**

- Quantitative Analyses ........................................ 646
- Accepting Risk and Addressing Uncertainty ............. 651
- How Can Organizations Deal with Risk? ................. 652
- Addressing Institutional Organization and the Paradox of Scale ................. 653
- Formulating Shared Socioenvironmental Visions .......... 654
- Public Stewardship in Watershed Management .......... 655
- Fundamental Principles ................................. 658

**Paradigms, Policies, and Prognostication about the Management of Watershed Ecosystems** .......... 662

*Michael C. Healey*

- Overview ..................................................... 662
- Introduction ................................................. 663
- Why Watersheds? ............................................ 664
- What Can and Cannot Be Known about Watershed Ecosystems? ......................... 666
- The Process of Watershed Management ..................... 667
  - The Role of Science .................................... 667
  - Values .................................................... 669
  - Accepting Limits ....................................... 671
- Achieving Goals ............................................ 672
- Evolving Paradigms in Watershed Management ............. 673
  - Watershed Engineering .................................. 673
  - Environmental Assessment and Mitigation ............. 674
- Adaptive Management ....................................... 675
- Looking to the Future ..................................... 675
- Ecosystem Management ..................................... 675
- Setting Goals for Ecosystem Management ................. 677
- From Incrementalism to Adaptive Rationalism .......... 678
- A New Class of Problems .................................. 679

Appendix: Reviewers ........................................... 683

Index ......................................................... 689
