Chapter 1 Explosive Volcanism and the Generation of Volcanic Plumes	1
1.1 Introduction	1
1.2 Composition and volatile content of magma	2
1.3 Physical properties of magma	6
1.4 Causes of explosive volcanism	10
1.4.1 Degassing of juvenile volatiles	10
1.4.2 Interaction of magma with external water	13
1.5 Volcanic ejecta	17
1.6 Distribution of explosive volcanism	19
1.7 Styles of explosive volcanism and plume generation	22
1.7.1 Plinian eruptions	24
1.7.2 Ignimbrite-forming eruptions	26
1.7.3 Strombolian eruptions	28
1.7.4 Vulcanian eruptions	29
1.7.5 Surtseyan eruptions	31
1.7.6 Hawaiian eruptions	31
1.7.7 Classification limitations	33
1.8 Magnitude and intensity of explosive volcanism	33
1.9 Frequency of explosive eruptions	34
1.10 Summary	35
Chapter 2 General Fluid Dynamical Principles	38
2.1 Introduction	39
2.2 Jets	41
2.3 Maintained buoyant plumes	42
2.4 Linearly mixing plumes	45
2.5 The uniform environment	46
2.6 The stratified environment	49
2.7 Time-dependent buoyancy fluxes	52
2.8 Discrete thermals	53
2.9 Starting plumes	56

2.10	Line sources	56
2.11	Negatively buoyant jets	57
2.12	Plumes with non-linear density mixing properties	58
2.13	Summary	61
Chapter 3 Source Conditions in Explosive Volcanic Eruptions		63
3.1	Introduction	64
3.2	Steady equilibrium ascent and eruption of magma	65
3.2.1	Dynamical model of conduit flow	67
3.2.2	Dynamic evolution of the flow	68
3.2.3	Conduit flow	70
3.2.4	Decompression into flared vents and craters	71
3.2.5	Pressure adjustment beyond the crater	74
3.3	Caveats and complications	77
3.3.1	Kinetic effects of gas exsolution	77
3.3.2	Fragmentation	77
3.3.3	Controls on initial plume temperature	78
3.3.4	Unsteady and heterogeneous conduit flow	79
3.3.5	Degassing during magma ascent: the lava problem	82
3.4	Transient Vulcanian-style eruptions	83
3.5	Summary	87
Chapter 4 Eruption Column Models		88
4.1	Introduction	89
4.2	Density variations in erupting mixtures	90
4.3	Fine-grained eruption columns	92
4.3.1	Gas thrust region	95
4.3.2	Convective region	96
4.3.3	The atmosphere	96
4.3.4	The motion of dry, dusty eruption columns	97
4.3.5	Fountain collapse	99
4.3.6	Column height	100
4.4	Particle fallout and thermal disequilibrium	101
4.5	Atmospheric controls on column behaviour	105
4.5.1	Variations in the environmental stratification	105
4.5.2	Wind-blown plumes	106
4.5.3	Moist convection in eruption columns	106
4.6	Short-lived eruptions	110
4.7	Starting plumes	112
4.8	Eruption columns associated with pyroclastic flows	112
4.9	Effects of particles on lower column dynamics	113
4.10	Multi-phase numerical models of eruption columns	114
4.11	Summary	116

Chapter 5 Observations and Interpretation of Volcanic Plumes	117
5.1 Introduction	117
5.2 Column height	118
5.3 Gas thrust region	122
5.4 Studies of starting plumes	124
5.4.1 Starting plume model	124
5.4.2 April 22, 1979 eruption of Soufrière, St Vincent	126
5.4.3 February 20, 1990 Lascar eruption	130
5.4.4 October 17, 1980 eruption of Mount St Helens	135
5.4.5 1947 Hekla Plinian eruption	137
5.5 Instantaneous explosions	138
5.6 Summary	139
Chapter 6 Pyroclastic Flows	141
6.1 Introduction	141
6.2 The nature of pyroclastic flows	142
6.2.1 Flows and surges	142
6.2.2 Observations	145
6.2.3 Range and aspect ratio of deposits	145
6.2.4 Constituents of pyroclastic flows	149
6.2.5 Dangers and hazards	149
6.3 Generation of pyroclastic flows by fountain collapse	149
6.3.1 Observations of eruptions	150
6.3.2 Experimental studies	155
6.3.3 Fluid dynamical models	158
6.3.4 Supercomputer models	166
6.3.5 Influence of flow inhomogeneities	168
6.3.6 Conclusions on fountain collapse	171
6.4 Other forms of column instability and flow formation	171
6.4.1 Transitional behaviour	171
6.4.2 Collapse of column margins	173
6.4.3 Coarse ejecta fallout	175
6.4.4 Asymmetric collapse	176
6.4.5 Whole column collapse	176
6.4.6 Vent edge and decompression effects	177
6.4.7 Geological observations	177
6.5 Pyroclastic flows generated from lava domes	177
6.6 Summary	178
Chapter 7 Co-ignimbrite Plumes	180
7.1 Introduction	180
7.2 The nature of co-ignimbrite plumes	180
7.3 Mechanisms of plume formation	187
7.3.1 Flow-fed plumes: fluidization	187
7.3.2 Flow-fed plumes: boundary shear mixing	189

7.3.3	Flow-fed plumes: non-linear mixing effects	189
7.3.4	Buoyant lift-off	192
7.3.5	Fountain-fed plumes	197
7.4	August 7, 1980 Mount St Helens flow: a case study	198
7.5	Theoretical models	201
7.5.1	A steady model	201
7.5.2	Comparison of steady model with observations	203
7.5.3	A thermal model	204
7.5.4	Comparisons of thermal model with observations	206
7.6	Summary	208
Chapter 8 Geothermal and Hydrovolcanic Plumes		209
8.1	Introduction	210
8.2	Geothermal systems	213
8.2.1	Steady venting	213
8.2.2	Geysers	215
8.3	Geothermal and fumarolic vapour plumes	217
8.3.1	Vapour plume model	218
8.3.2	Results of model calculations	219
8.4	Phreatic eruptions	224
8.5	Phreatomagmatic eruptions	225
8.5.1	Explosive energy and fragmentation	226
8.5.2	Properties of erupting water–magma mixtures	227
8.6	Submarine eruptions	230
8.7	Summary	232
Chapter 9 Hydrothermal Plumes		233
9.1	Introduction	234
9.2	Generation of hydrothermal plumes	234
9.3	Hydrothermal vents	237
9.3.1	Style of venting	237
9.3.2	Distribution of venting sites	239
9.4	Observations of sea-floor venting	241
9.4.1	Submersibles	241
9.4.2	Remote surveys of plume dispersal	241
9.4.3	Megaplumes	242
9.4.4	Bubble plumes	243
9.5	Particles in hydrothermal plumes	244
9.6	Dynamics and thermodynamics of hydrothermal plumes	244
9.6.1	Initial conditions	246
9.6.2	Plume models	247
9.6.3	Diffuse plumes	248
9.7	Properties of the plume and neutrally buoyant intrusion	251
9.7.1	Effects of abyssal cross-flows	252

9.8	Fallout of particles from hydrothermal plumes	252
9.9	Summary	254
Chapter 10	Basaltic Eruptions and Fire Fountains	256
10.1	Introduction	257
10.2	Degassing phenomena in basaltic eruptions	258
10.2.1	Gas content	259
10.2.2	Viscosity	259
10.2.3	Vent geometry	260
10.3	Hawaiian fire fountains and Strombolian eruptions	260
10.3.1	Fire fountain activity	264
10.3.2	Height of rise of fire fountains	264
10.3.3	Variations in eruptive activity	266
10.3.4	Strombolian activity	266
10.4	The plumes above fire fountains	267
10.4.1	Height of rise for a line plume	268
10.4.2	A dynamical model of a Hawaiian plume	270
10.4.3	Comparison with observations	275
10.5	Basaltic Plinian and ignimbrite eruptions	276
10.6	Summary	276
Chapter 11	Atmospheric Dispersal	278
11.1	Introduction	279
11.2	Dynamics of umbrella clouds	280
11.2.1	Models of umbrella cloud growth	280
11.2.2	Entrainment	284
11.3	Plume–wind interaction	284
11.3.1	Strong plumes	285
11.3.2	Weak plumes	288
11.3.3	Topographic effects	294
11.3.4	Regional and global transport	294
11.4	Comparison with observations	298
11.4.1	Umbrella clouds	298
11.4.2	Downwind spreading and plume dispersal patterns	300
11.4.3	Examples of hemispheric to global transport	302
11.5	Summary	306
Chapter 12	Remote Sensing of Volcanic Plumes	307
12.1	Introduction	307
12.2	Principles of electromagnetic theory	308
12.3	Electromagnetic remote sensing basics	311
12.3.1	Spectral region and resolution	312
12.3.2	Spatial resolution	314
12.3.3	Observation opportunities	314

12.4	Determination of plume properties	321
12.4.1	Plume height	321
12.4.2	Plume temperature	324
12.4.3	Output of SO ₂	327
12.5	Satellite plume differentiation and eruption monitoring	331
12.5.1	Volcanic plume distinction	331
12.5.2	Plume dispersal observations from satellite	333
12.6	Monitoring of electric potential gradients and lightning generated by plumes	337
12.6.1	Background	337
12.6.2	Field measurements at volcanoes	339
12.7	Acoustic measurements of volcanic plumes	343
12.7.1	Principles	343
12.7.2	Measurements at Stromboli	344
12.8	Summary	345
Chapter 13 Tephra Fall Deposits		346
13.1	Introduction	346
13.2	Ejecta components	347
13.3	Petrology of ejecta	350
13.4	General description of fallout	353
13.5	Characteristics of fall deposits	356
13.5.1	Thickness	356
13.5.2	Volumes	365
13.5.3	Particle size	366
13.6	Classification of fall deposits	369
13.7	Co-ignimbrite fall deposits	372
13.8	Tephrochronology	373
13.8.1	Correlation and dating	374
13.8.2	Archaeological applications	375
13.8.3	Marine tephrochronology	376
13.9	Summary	378
Chapter 14 Sedimentation from Volcanic Plumes		380
14.1	Introduction	381
14.2	Particle settling	382
14.2.1	The influence of particle shape	385
14.2.2	Variation of fall velocity with altitude	386
14.3	Ballistic particles	386
14.4	Sedimentation from turbulent suspensions	390
14.4.1	Basic principles	390
14.4.2	Radial gravity currents	391
14.4.3	Plumes and jets	391
14.4.4	Backflow	393
14.4.5	Re-entrainment	393

14.4.6	Effects of wind	395
14.4.7	Atmospheric advection/diffusion models	396
14.5	Observations	397
14.5.1	Laboratory experiments	397
14.5.2	Volcanic deposits	398
14.5.3	Re-entrainment	403
14.6	Summary	403
 Chapter 15 Quantitative Interpretation of Tephra Fall Deposits		 404
15.1	Introduction	404
15.2	Maximum grain size data	405
15.2.1	Theoretical considerations	407
15.2.2	Maximum clast method	412
15.2.3	Evaluation of maximum clast method	416
15.2.4	Application to Plinian eruptions	418
15.3	Application of plume sedimentation models	422
15.3.1	Thickness variations	422
15.3.2	Particle size variations	426
15.3.3	Emplacement temperature and welding	428
15.4	Summary	431
 Chapter 16 Particle Aggregation in Plumes		 432
16.1	Introduction	432
16.2	Geological observations	433
16.2.1	Anomalous deposit thicknesses	433
16.2.2	Particle size distributions	436
16.2.3	Aggregates	438
16.3	Aggregation mechanisms	444
16.3.1	Collision mechanisms	446
16.3.2	Binding mechanisms	448
16.4	Experiments and theory	449
16.4.1	Laboratory simulation	450
16.4.2	Theoretical models of aggregation	458
16.5	Summary	461
 Chapter 17 Environmental Hazards		 463
17.1	Introduction	463
17.2	Health hazards to humans	464
17.3	Hazards to animals	468
17.4	Effect on vegetation	471
17.5	Property damage	473
17.6	Disruption of community infrastructure	476
17.7	Aviation hazards	480

17.7.1	Disruptions of airport operations	480
17.7.2	Plume encounters in flight	481
17.7.3	Effect of ash and aerosols on aircraft	481
17.7.4	Mitigation	488
17.8	Summary and lessons learned	490
Chapter 18 Atmospheric Effects		493
18.1	Introduction	493
18.2	Early research	494
18.3	Physical principles	496
18.4	Sedimentation and dispersal of volcanic aerosols	499
18.5	The Pinatubo 1991 eruption	503
18.5.1	Sulphur dioxide emission	506
18.5.2	Sulphur dioxide decay and sulphate aerosol evolution	507
18.5.3	Stratospheric warming	516
18.5.4	Tropospheric and surface cooling	516
18.5.5	Ozone perturbation	518
18.5.6	Depletion of nitrogen dioxide	521
18.6	Volcanologic parameters	522
18.7	Summary	524
