List of Figures ix
List of Tables xi
List of Contributors xiii
Preface xv

1. The Behavioral Basis of Non-Market Valuation
   Nancy E. Bockstael and Kenneth E. McConnell
   1.1 Introduction 1
   1.2 A General Theory? 2
   1.3 Models of Behavior and Restrictions Needed to Value Changes in Environmental Goods
      1.3.1 The Weak Complementarity Restriction in its Simplest Form 6
      1.3.2 Introducing Household Production Technology 9
      1.3.3 The Environmental Quality Viewed as an Input 11
   1.4 Models that Implicitly Treat Environmental Quality as a Choice Variable
      1.4.1 When Markets Intervene 15
      1.4.2 Framing the Decision Problem in a Discrete Choice Setting 19
   1.5 Why is this Welfare Analysis So Difficult to Do in Practice?
      1.5.1 Linking Changes in the Environment to Changes in Behavior 25
      1.5.2 When Utility Generating Effects Are Not Separable 27
      1.5.3 Obtaining the Right Data 28
      1.5.4 Exploring Behavioral Connections 28
   1.6 Conclusions 30
   References 30

2. Welfare Analysis with Discrete Choice Models
   W. Michael Hanemann
   2.1 Introduction 33
   2.2 Budget-Constrained Discrete Choice
      2.2.1 Deterministic Utility Models 35
      2.2.2 Random Utility Models 38
      2.2.3 The Case of No Income Effects 41
2.3 Compensation Measures 43
2.4 Other Random Utility Maximization Models 48
  2.4.1 Random Coefficients Models 48
  2.4.2 Nonbudget-Constrained and Mixed Discrete/Continuous Choices 50
2.5 Applications 53
Appendix: Proof of Proposition 62
References 63

3. TWO RUMS unCLOAKED: Nested-Logit Models of Site Choice and Nested-Logit Models of Participation and Site Choice 65
Edward R. Morey
3.1 Introduction 65
3.2 The Two-Level NL Model of Recreational Demand: Its CDF, Probabilities, and Likelihood Function 66
3.3 Special Cases of the Two-Level NL Model 81
3.4 Estimation 88
3.5 Derivation of Expected Maximum Utility for the Two-level NL Model 93
3.6 The Functional Forms of the Conditional Indirect Utility Functions, \( \langle V^*_w \rangle \), and Budget Exhaustion 97
3.7 Compensating Variation and Equivalent Variation 101
3.8 Expanding The Nest 111
3.9 Example Gauss Code 114
References 116

4. Mixed Logit Models for Recreation Demand 121
Kenneth E. Train
4.1 Introduction 121
4.2 Substitution patterns 122
4.3 Relation to Utility-Maximizing Behavior 125
  4.3.1 Random-Parameters, or Random-Coefficients, Logit 125
  4.3.2 Error-Components Interpretation 126
  4.3.3 Approximation to any Choice Model 128
4.4 Estimation 130
4.5 Panel Data 133
4.6 Application 135
References 139

5. An Empirical Assessment of Multinomial Probit and Logit Models for Recreation Demand 141
Heng Z. Chen, Frank Lupi, and John P. Hoehn
5.1 Introduction 141
List of Figures

3.1 The Probability of Choosing an Alternate 69
3.2 The Extreme Value CDF with $r=1$ and Modes of $-2$, 0 and 2 83
3.3 The Extreme Value PDF with Mode=0 and $r=0.5$, 1.0 and 1.5 85
6.1 Nested Logit Model Structure 183
