Contents

Preface vii

1 Introduction 1
   1.1 Information 2
   1.2 The concept of probability 3
   1.3 An example 7
   1.4 Basic results in linear algebra and probability 10
   1.5 Notation 14
   1.6 Outline of the book 15
       Exercises 16

2 Elements of inference 19
   2.1 Common statistical models 19
   2.2 Likelihood-based functions 21
   2.3 Bayes' theorem 26
   2.4 Exchangeability 32
   2.5 Sufficiency and the exponential family 35
   2.6 Parameter elimination 41
       Exercises 45

3 Prior distribution 53
   3.1 Entirely subjective specification 53
   3.2 Specification through functional forms 55
   3.3 Conjugacy with the exponential family 59
   3.4 The main conjugate families 60
   3.5 Non-informative priors 65
   3.6 Hierarchical priors 71
       Exercises 73

4 Estimation 79
   4.1 Introduction to decision theory 79
   4.2 Classical point estimation 86
   4.3 Comparison of estimators 92
Contents

4.4 Interval estimation 99
4.5 Estimation in the normal model 105
Exercises 116

5 Approximate and computationally intensive methods 125
5.1 The general problem of inference 125
5.2 Optimization techniques 126
5.3 Analytical approximations 133
5.4 Numerical integration methods 144
5.5 Simulation methods 147
Exercises 160

6 Hypothesis testing 167
6.1 Introduction 167
6.2 Classical hypothesis testing 168
6.3 Bayesian hypothesis testing 181
6.4 Hypothesis testing and confidence intervals 186
6.5 Asymptotic tests 188
Exercises 191

7 Prediction 197
7.1 Bayesian prediction 197
7.2 Classical prediction 201
7.3 Prediction in the normal model 203
7.4 Linear prediction 206
Exercises 208

8 Introduction to linear models 211
8.1 The linear model 211
8.2 Classical linear models 213
8.3 Bayesian linear models 218
8.4 Hierarchical linear models 224
8.5 Dynamic linear models 227
Exercises 232

Sketched solutions to selected exercises 235

List of distributions 247
