## CONTENTS

Introduction, by D.D. Blackwell

Problems and potential of industrial temperature data from a cratonic basin environment, by A. Forster and D.F. Merriam

Regional-scale geothermal and hydrodynamic regimes in the Alberta Basin: a synthesis, by S. Bachu

Basin-scale groundwater flow and advective heat flow: an example from the northern Great Plains, by W.D. Gosnold, Jr.

Thermal insulation by low thermal conductivity shales: implications for basin-scale fluid flow and heat transport by J.A. Nunn, G. Lin, and L. Zhang

Temperature and maturity effects of magmatic underplating in the Gjallar Ridge, Norwegian Sea, by W. Fjeldskaar, H. Johansen, T. A. Dodd, and M. Thompson

Combining tectonics and thermal fields in Taranaki Basin, New Zealand, by P.A. Armstrong and D.S. Chapman

Thermal history of a deep well in the Michigan Basin: implications for a complex burial history, by W.D. Everham and J.E. Huntoon

Rising mud diapirs and their thermal anomalies, by E. Bagirov and I. Lerche
Effect of oil and gas saturation on simulation of temperature history and maturation, by H.S. Poelchau, C. Zwach, Th. Hantschel, and D.H. Welte ................................................................. 219

Contributors ........................................................................................................... 237
