Environmental Indicators for Agriculture

Volume 2

Issues and Design
"The York Workshop"
# TABLE OF CONTENTS

## Part I: Setting the Scene

### POLICY CONTEXT OF OECD AGRI-ENVIRONMENTAL INDICATORS

*Kevin Parris,*

*Policies and Environment Division,*

*Directorate for Food, Agriculture and Fisheries, OECD, Paris, France*

1. Introduction .................................................................................. 13
2. Why is OECD developing a set of indicators? ......................... 13
3. What are the agri-environmental policy issues being addressed by indicators? .......... 15
4. What is the role of indicators in agri-environmental policy decision-making? .......... 18
5. How is the OECD work being developed? .................................. 20
6. How are indicators informing the policy dialogue and what are the future challenges? ...... 24

*Bibliography .................................................................................. 26*

### MEASURING SUSTAINABLE DEVELOPMENT: IMPLICATIONS FOR AGRI-ENVIRONMENTAL INDICATORS

*David Pearce,*

*Centre for Social and Economic Research on the Global Environment (CSERGE),*

*University College, London and University of East Anglia, United Kingdom*

1. Introduction .................................................................................. 29
2. The questions about sustainable development .............................. 29
3. Is sustainable development focused too much on future generations? .......... 33
4. Indicators of sustainable development ....................................... 35
5. Sustainable development and the agricultural sector ............... 38
6. Conclusions .................................................................................. 41

*Bibliography .................................................................................. 43*
Part II:
Summary of the Workshop Discussion and Recommendations

OVERALL SUMMARY OF THE WORKSHOP DISCUSSION AND RECOMMENDATIONS

Chris J. Doyle,
Scottish Agricultural College, Auchincruive, United Kingdom

1. Background to the Workshop .......................................................... 49
2. Selection of indicators ................................................................. 51
3. Application of agri-environmental indicators for policy purposes .......... 59
4. The way forward ................................................................. 63

SUMMARY REPORTS AND RECOMMENDATIONS COVERING SPECIFIC AGRI-ENVIRONMENTAL INDICATORS

1. Common and cross-cutting issues for agri-environmental indicators concerning: water quality, water use, soil quality and land conservation ....................... 65
2. Common and cross-cutting issues for agri-environmental indicators concerning: biodiversity, wildlife habitat and landscape .................................................. 80
3. Common and cross-cutting issues for agri-environmental indicators concerning: farm management, farm financial resources and socio-cultural issues (rural viability) ...... 92

Part III:
Agri-environmental Indicators as a Policy Tool ........................................ 111

CROSS-CUTTING ISSUES IN DEVELOPING AGRI-ENVIRONMENTAL INDICATORS

Andrew Moxey,
University of Newcastle-upon-Tyne, United Kingdom

Executive summary ........................................................................... 113
1. Introduction .................................................................................. 114
2. Indicators and frameworks ......................................................... 115
3. Data measurement ...................................................................... 118
4. Aggregation and economics ....................................................... 121
5. Interpretation and adoption ......................................................... 123
6. Conclusions ................................................................................ 127

Bibliography .................................................................................. 128
USING AGRI-ENVIRONMENTAL INDICATORS TO ASSESS ENVIRONMENTAL PERFORMANCE

Paul J. Thomassin
McGill University, Quebec, Canada

Executive summary .................................................................................................................. 131
1. Introduction ......................................................................................................................... 132
2. Using indicators for policy analysis .................................................................................... 132
3. Generic policy response analysis ....................................................................................... 133
4. Specific policy response analysis ....................................................................................... 134
5. Agri-environmental modelling ......................................................................................... 135
6. Non-modelling approaches ............................................................................................... 143
7. Integration of models to predict future impacts .................................................................. 146
8. Discussion .......................................................................................................................... 147
9. Conclusions ....................................................................................................................... 148

Bibliography .......................................................................................................................... 150

DEVELOPING AND USING AGRI-ENVIRONMENTAL INDICATORS FOR POLICY PURPOSES: OECD COUNTRY EXPERIENCES

David Baldock
Institute for European Environmental Policy, London, United Kingdom

1. Background .......................................................................................................................... 153
2. The policy framework for indicators ................................................................................... 156
3. Some examples of indicators used by policy makers ......................................................... 162
4. Some issues for policy makers ........................................................................................... 169
5. Concluding remarks ........................................................................................................... 174

Appendix: Examples of proposed agri-environmental indicators for certain OECD Member countries......................................................................................................................... 175

Bibliography .......................................................................................................................... 180
Part IV:

Official Statements ........................................................................................................... 183

OPENING ADDRESS TO THE WORKSHOP

Elliot Morley, M.P., Countryside Minister,
Ministry of Agriculture, Food and Fisheries, London, United Kingdom .................... 185

OUTCOME OF THE WORKSHOP IN THE CONTEXT OF OECD WORK ON SUSTAINABLE DEVELOPMENT

Gérard Viatte,
Director for Food, Agriculture and Fisheries, OECD, Paris, France .......................... 189

CLOSING REMARKS FOR THE WORKSHOP

Dudley Coates,
Head of Environment Group,
Ministry of Agriculture, Food and Fisheries, London, United Kingdom .................... 193

ANNEX .................................................................................................................................. 195

List of Recommended OECD Agri-environmental Indicators ........................................ 195
Workshop Agenda and Main Contributors ................................................................. 205
List of Participants ........................................................................................................... 208

Tables

1. Size of the agricultural sector ...................................................................................... 39
2. List of recommended indicators proposed for the soil and water areas ................ 53
3. List of recommended indicators proposed for the biodiversity, habitat and landscape areas .... 55
4. List of recommended indicators proposed for the farm management, farm financial and socio-cultural (rural viability) areas ................................................................. 57
5. Information generated by the Policy Evaluation Matrix .............................................. 133
6. Change in land use as a result of a policy change (percentage terms) ..................... 136
7. Water erosion results from a change in policy (tonnes/hectare/year) ....................... 136
8. Soil erosion estimates in the United States Corn Belt ............................................... 138
9. Ecological commodities included in the Economic-Ecological Input-Output Model .. 141
10. Worksheet 1: Impacts of policies on producer decisions ......................................... 144
11. Worksheet 2: Impacts of producer decisions on environmental risk ...................... 144
12. Worksheet 3: Significance of environmental risk ..................................................... 145
Annex Tables

1. List of recommended contextual indicators ................................................................. 196
2. List of recommended indicators proposed for the water, soil and land areas ..................... 196
3. List of recommended indicators proposed for the biodiversity, wildlife habitat and landscape areas ........................................................................................................... 199
4. List of recommended indicators proposed for the farm management, farm financial and socio-cultural (rural viability) areas ................................................................................................................................ 201
5. List of indicators for nutrients, pesticides and greenhouse gases ............................................. 204

Figures

1. Criteria for selecting environmental indicators ........................................................................ 19
2. The Driving Force-State-Response Framework to address agri-environmental linkages and sustainable agriculture .................................................................................................................. 21
3. Linkages between the indicator concepts .................................................................................. 92
4. Indicators of sustainable farm management practices .............................................................. 98
5. Diagram showing three stages in agri-environmental indicator development ......................... 117

Boxes

1. Whole farm management ........................................................................................................... 99
2. Nutrient management ............................................................................................................... 100
3. Pest management ..................................................................................................................... 101
4. Soil and land management ........................................................................................................ 102
5. Water/irrigation management .................................................................................................... 103
6. Land use as an example agri-environmental indicator .............................................................. 126
7. AGENDA 21: National reports on implementation for the UNCSD special session in 1997 ................................................................................................................................. 158
8. Assessment of environmental impacts of agriculture policy options in Canada ...................... 167
9. US Department of Agriculture *Environmental Benefits Index (EBI)* ........................................... 170
