Cluster-II Workshop
Multiscale/Multipoint Plasma Measurements

22-24 September 1999
Imperial College, London

Organised by:

European Space Agency
and
Imperial College, London
Contents

Foreword.............................................................................................................. ix
A. Balogh and C.P. Escoubet

Session 1: Opening session
Chairman: C. Philippe Escoubet

Cluster-II Project Status ...................................................................................... 1
J. Ellwood (ESA/ESTEC, The Netherlands)

Les Woolliscroft: his Work on Space Plasmas .................................................... 3
H. Alleyne (Sheffield University, U.K.)

Session 2: Multi-point observations
Chairman: Goetz Paschmann

ISEE Lessons for Cluster ..................................................................................... 11
C.T. Russell (IGPP/UCLA, USA)

ISSI Small Scale Plasma Structures Team: Results and Lessons ...................... 25
S. Schwartz (QMW, U.K.) and G. Paschmann (MPE, Germany)

Variability and Structures in the Solar Wind – Magnetosheath – Magnetopause ..... 29
by Multiscale Multipoint Observations
L. Zelenyi et al. (IKI, Russia)

The Cusp as seen from Interball ........................................................................... 39
I. Sandahl et al. (IRF-Kiruna, Sweden)

Polar Eyes the Cusp ............................................................................................. 47
C.T. Russell (IGPP/UCLA, USA)

IMF Driving of Dayside Convection and the Cusp .............................................. 57
N.C. Maynard (MRC, USA), W.J. Burke (Hanscom Air Force Base, USA)

Multipoint Measurements in the Magnetosphere: ISTP Results ....................... 63
and Challenges for Cluster-II
T.I. Pulkkinen and H.E.J. Koskinen (FMI, Finland)
Session 3: Modelling and data analysis tools
Chairman: Alain Roux

Cluster II Analysis of Turbulence using Correlation Functions
T.S. Horbury (QMW, U.K.) ........................................... 89

ISSI Book on Analysis Methods for Multi-Spacecraft Data
G. Paschmann (MPE, Germany) and S.J. Schwartz (QMW, London) ........... 99

Minimum Variance and DeHoffmann-Teller Techniques
N. Sckopke (MPE, Germany) et al. .................................... 101

Dual-Spacecraft Verification of Magnetopause Orientation and Motion:
Preliminary Results
M.W. Dunlop et al. (Imperial College, U.K.) .................................. 103

Time-Domain Identification of Nonlinear Processes in Space Plasma
Turbulence using Multi-Point Measurements
D. Coca et al. (Sheffield U., U.K.) ........................................... 111

Theory of Multi-Point Data Analysis
P. Song (Michigan U., USA) and C.T. Russell (IGPP/UCLA, USA) .......... 119

Session 4: Cluster-II specific talks
Chairman: Christopher T. Russell and Lev Zelenyi

Optimisation of Spacecraft Potential Control for Multi-Point Plasma Measurements
K. Torkar (IWF, Austria) et al. ........................................... 129

Time of Flight Dispersed Ion Structures into the Auroral Bulge
J.-A. Sauvaud (CESR, France) et al. ..................................... 137

EDI Multipoint Analysis
G. Paschmann (MPE, Germany) ........................................... 145
The Cluster Magnetic Field Investigation: FGM-Specific Multipoint Analysis
Andre Balogh & M.W. Dunlop (Imperial College, U.K.)

Multi-point Science with the Cluster Plasma Electron Data
Andrew Fazakerley and S. Szita (MSSL, U.K.)

Cluster and Energetic Particles in Geospace - What can be Learned from Geotail?
B. Wilken et al. (MPAe, Germany)

The Digital Wave Processor - WEC Modes and Timing on Cluster
Hugo Alleyne et al. (Sheffield U., U.K.)

Alfvén Waves and Structures: What can we Learn with Multipoint Measurements on Cluster-II
K. Stasiewicz and G. Gustafsson (IRF-Uppsala, Sweden)

The Cluster STAFF Experiment Specific Multi-Point Analysis
N. Cornilleau-Wehrlin et al. (CETP, France)

Multi-Spacecraft Studies on Cluster: Perspectives from the Whisper Experiment
P.M.E. Décréau et al. (LPCE, France)

VLBI Studies of Auroral Kilometric Radiation and Solar Type III Bursts using the Wideband Data Plasma Wave Instrument
R.L. Mutel, D.A. Gurnett and R.L. Huff (Iowa U., USA)

The Role of the Cusp as a Source for Magnetospheric Particles: a New Paradigm
T.A. Fritz (Boston U., USA)

Global MHD Simulations for Cluster-II
J. Berchem (IGPP/UCLA, USA)

Numerical Simulations for CLUSTER tested with Equator-S and Geotail
J. Büchner (MPAe, Germany) et al.

Exchange and Preservation of Cluster Science Data
C.C. Harvey (CESR) et al.

Session 5: Future of multi-point measurements
Chairman: Andre Balogh

SWARM: a Fleet of Microsatellites to Explore the Magnetosphere
S.J. Schwartz. (QMW, London) et al.

Magnetospheric Constellation Missions
J.F. Fennell (Aerospace Corp., USA) et al.
Future of Multipoint Observations and Space Weather ........................................243
H.E.J. Koskinen (FMI, Finland)

Methods of Small-Scale Multi-Satellite Measurements for Project Roy ..................249
L.M. Zelenyi (Academy of Sciences, Moscow) et al.

**Poster Session**
Chairman: Lev Zelenyi

Tetrahedron Geometric Factors and Accuracy of Current Density Determination ..........259
P. Robert

Accuracy of Fields Gradient Estimations by Cluster: Explanation of its ..................265
Dependency upon Elongation and Planarity of the Tetrahedron
G. Chanteur

Multipoint Measurements as a Test of the Conjecture of Avalanching .......................269
and SOC in the Dynamic Magnetosphere
S.C. Chapman, R.O. Dendy, G. Rowlands

PV – Wave™ Routines for Estimating Gradients of Fields and their Covariances ..........277
G. Chanteur

An Investigation into Instrumental Nonlinear Effects ...........................................279
S. N. Walker, R. Huff, M. A. Balikhin

Coherence Lengths of the Low Frequency Turbulence ...........................................283
at the Bow Shock and in the Magnetosheath
I. Bates, M. Balikhin, H.St.C.K. Alleyne, M. Dunlop, H. Lühr

Minimum Variance Free Identification of the Composition ....................................287
of Space Plasma Turbulence and Nonlinear Processes in it
M. Balikhin, I. Bates and M. Dunlop

Turbulent Structures in the Outer Cusp ..........................................................291
A. Pedersen, C.-G. Faethhammer, N. Maynard, F. Mozer, R. Pfaff, B. Popielawska,
C.T. Russell,

On the Coordinated use of MIRACLE and Satellite Observations ............................295
– a Case Study of a Space Weather Event
K. Kauristie, A. Viljanen, A. Pulkkinen, O. Amm, P. Janhunen, T.I. Pulkkinen,
R. Pirjola, R.J. Pellinen and M. Brittnacher

Space-Time Ambiguities in Observations of the Magnetospheric Cusp: ....................299
the Need for Small-Scale Multi-Point Magnetospheric Measurements
J. Watermann and P. Stauning
Measurement of Wave-Particle Interactions in the Magnetosphere ........................................... 303
A.M. Buckley, M.P. Gough, H. Alleyne, K. Yearby and I. Willis

Survey of ELF and VLF Experiments in the Magnetosphere .................................................. 307
F. Darrouzet and J. Lemaire

Investigation of Mirror Mode Structures using Multiple Spacecraft Measurements ............... 311
M. Tátrallyay and G. Erdős

Remote Sensing of Plasma Boundaries by Finite Ion Gyroradius Effects: ............................... 315
Applications for the RAPID Instrument on Cluster
P.W. Daly and U. Mall

Observations of the Northern Polar Cusp with the Polar Spacecraft ................................... 319
T.J. Stubbs, P.J. Cargill, M. Grande, B. Kellett, M. Lockwood, C. Perry

Project Variant: Current and Field Measurements on Board SICH-1M Satellite ..................... 323
H. Alleyne and V. Korepanov

Combining Multi-Point Spacecraft and Two-Dimensional Ground-Based .............................. 327
Observations: Theory and Example of an IMF B_y-related Cusp Current System
O. Amm, K. Kauristie, T.I. Pulkkinen, M.J. Engebretson, R.A. Greenwald, H. Lühr and T. Moretto

HF-VLF Plasma Waves Excitation During Geomagnetic Storm in the Polar Cusp Region ....... 331
H. Rothkaehl, J. Blecki, K. Stasiewicz, A. Eriksson

IACG Boundary Layer Campaign: Current Status and Cluster-II Perspectives ..................... 335

Initial Results from the Low Latitude Magnetometer Array in China (CHIMAG) ................. 339

Separation Strategy for Co-ordinated Measurements ............................................................... 343
T.I. Woodward, M.W. Dunlop and D.J. Southwood

Observations of Magnetosheath Structure Upstream of the Magnetopause .......................... 347
T.I. Woodward, M.W. Dunlop, A.N. Fazakerley and N. Sckopke

Cluster Magnetic Field Analysis Techniques .............................................................................. 351
M.W. Dunlop and T.I. Woodward

The Use of Dual-Spacecraft Data for the Identification of Non-Planar Magnetic Structures .... 355
M.W. Dunlop and T.I. Woodward
The HEOS Magnetic Field Observations of the Earth's Cusp in the Context of Modern Field Models

M.W. Dunlop, P. J. Cargill and T. Stubbs

The Near-Earth Magnetic Satellite Missions, Ørsted and SAC-C/Ørsted-2, in Relation to the Cluster-II Mission

T. Moretto, E. Friis-Christensen, J.W. Gjerlov, N. Olsen and F. Primdahl

QSAS: a Flexible Application for Modern Multi-Point Analysis

A.J. Allen, J. Barnes, D. Burgess, M. Fraenz, S.J. Schwartz

Asymmetry of the Cusp Position observed by the Polar Spacecraft

Fast Flows in the Midtail During Auroral Substorms

R. Nakamura, W. Baumjohann, M. Brittnacher, G. Parks, V.A. Sergeev, M. Kubyshkina and T. Mukai

Energetic Oxygen Ions Sounding the Magnetopause

Q.-G. Zong, B. Wilken, S.Y. Fu and Z.-Y. Pu

Dispersed Ion Structures in the Auroral Nightside Magnetosphere

R.A. Kovrazhkin and J.-A. Sauvaud

ISTP Multi-Point Observations of Earth's Bow Shock

R.L. Kessel

Two Ways IDFS/ISDAT Data Interface

P. Trávnicek and P. Mitková
