Physics and Modelling of Wind Erosion

by

Yaping Shao

School of Mathematics,
The University of New South Wales,
Sydney, Australia
## Contents

Preface xi  
Acknowledgments xiii  

1. WIND EROSION AND WIND-EROSION RESEARCH 1  
1. Wind-erosion Phenomenon 1  
2. Integrated Wind-erosion Modelling 8  

2. PATTERNS OF WIND EROSION IN THE WORLD 13  
1. Climatic Background for Wind Erosion 14  
2. Atmospheric Systems which Generate Dust Storms 18  
2.1 Cold Fronts 19  
2.2 Squall Lines 21  
3. Global Wind-erosion Patterns 24  
4. Major Wind-erosion Regions 29  
4.1 Wind Erosion in the Sahara 29  
4.2 Wind Erosion in the Middle East and Central Asia 32  
4.3 Wind Erosion in China 35  
4.4 Wind Erosion in the United States 37  
4.5 Wind Erosion in Australia 37  

3. ATMOSPHERIC BOUNDARY-LAYER AND ATMOSPHERIC MODELLING 41  
1. Atmospheric Boundary Layer 41  
1.1 Basic Features of Different Atmospheric Boundary Layers 42  
   Convective Boundary Layers 42  
   Stable Layer 43  
2. Governing Equations for Atmospheric Boundary-Layer Flows 46  
3. Reynolds Averaging and Turbulent Flux 51  
4. Equation System for Mean Flows 54  
5. Friction Velocity 55
## 6. Equations for Turbulent Fluxes and Variances

### 6.1 Turbulent Dust Flux

### 6.2 Dust Concentration Variance

### 6.3 Turbulent Kinetic Energy

### 6.4 Stability Measures

## 7. Similarity Theories

### 7.1 Monin-Obukhov Similarity Theory

### 7.2 Mixed-Layer Similarity Theory

## 8. Simulation of Atmospheric Boundary-Layer Flows

## 9. Atmospheric Prediction Models

## 4. LAND-SURFACE MODELLING

### 1. General Aspects of Land-Surface Schemes

### 2. Surface Energy Balance

### 3. Soil Moisture and Soil Temperature

### 4. Calculation of Surface Fluxes

### 5. Land-Surface Parameters

### 6. Examples of Land-Surface Simulation

### 7. Treatment of Heterogeneous Surfaces

#### Averaging Surface Properties

#### PDF Representation

#### Explicit Subgrid and Mosaic Methods

#### Spatial Variation of Atmospheric Data

## 5. BASIC CONCEPTS OF WIND EROSION

### 1. Soil-Particle Characteristics

### 2. Aerodynamic Forces on an Airborne Particle

### 3. Particle Terminal Velocity

### 4. Modes of Particle Motion

#### Suspension

#### Saltation

#### Creep

### 5. Threshold Friction Velocity for Sand Particles

#### The Bagnold Scheme

#### The Greeley-Iversen Scheme

#### Modified Greeley-Iversen Scheme

### 6. Threshold Friction Velocity for Dust Particles

#### The Relative Importance of Forces

#### Van der Waals Forces

#### Electrostatic Forces

#### Capillary Forces

#### Other Forces

### 6.2 The Threshold Friction Velocity as a Stochastic Variable

## 6. THE DYNAMICS AND MODELLING OF SALTATION

### 1. Uniform Saltation

9. INTEGRATED WIND-EROSION MODELLING 279
   1. Introduction 279
   2. Sand Drift and Dust Emission of Soils with Multiple Particle Sizes 281
   3. Threshold Friction Velocity for Natural Surfaces 284
      3.1 Drag Partitioning: Approach I 285
         Ground Stress 287
         Stress on the Roughness Elements 288
         Total Stress 289
         Stress Partition 289
      3.2 Drag Partitioning: Approach II 291
      3.3 Double-Drag Partitioning 293
      3.4 Soil Moisture 294
      3.5 Chemical Binding and Crust 299
   4. System Structure and Land-surface Parameters 300
      4.1 Soil Particle-size Distribution 302
      4.2 Soil-Binding Strength 307
      4.3 Frontal-area Index and Roughness Length 309
         Frontal-area Index and Roughness Length of Sparse Vegetation 309
         Frontal-Area Index and Roughness Length of Soil Aggregates 311
   4.4 Soil Moisture 311
   5. Manipulation of GIS Data 311
   6. Examples of Integrated Wind-erosion Modelling 315
      6.1 Wind-erosion Time Series 315
      6.2 Wind-erosion Prediction On Broad Scales 316

10. SAND DUNES, DYNAMICS AND MODELLING 325
    1. Classification of Sand Dunes 326
    2. Basic Features of Flow Over a Sand Dune 333
    3. Sand Transport 337
    4. Computational Simulation 341
       4.1 Flow-model Implementation: A Non-hydrostatic Model 343
       4.2 Flow-model Implementation: A Large-eddy Simulation Model 345
       4.3 Computation of Erosion and Deposition Rates 348

11. TECHNIQUES FOR WIND-EROSION MEASUREMENTS 351
    1. Wind-tunnel Measurements 351
    2. Samplers 353
       2.1 Passive Samplers 354
       2.2 Active Samplers 357
       2.3 Fast-responding Samplers 357
