## Contents

Preface <i>C.A. Burga &amp; A. Kratochwil</i>	1
<b>Chapter A General aspects of biomonitoring</b>	<b>5</b>
Biomonitoring – Tasks and limits <i>F. Klötzli</i>	5
Statistical design and analysis in long-term vegetation monitoring <i>O. Wildi</i>	17
Administration levels and tasks of nature conservation efficiency control <i>M. Labasch &amp; A. Otte</i>	41
<b>Chapter B Examples of applied biomonitoring in Germany and Switzerland</b>	<b>61</b>
Monitoring recent vegetation changes in nutrient-rich beechwoods in central Germany <i>W. Hakes</i>	61
Biomonitoring - Evaluation and assessment of heavy metal concentrations from two German moss monitoring surveys <i>U. Herpin, U. Siewers, K. Kreimes &amp; B. Markert</i>	73
Do phytophenological series contribute to vegetation monitoring? <i>C. Defila</i>	97
Species responses to climatic variation and land-use change in grasslands of southern Switzerland <i>A. Stampfli &amp; M. Zeiter</i>	107
Little flowers in a mild winter <i>J. Röthlisberger</i>	125
Vegetation monitoring on a small-scale restoration site in the alpine belt: Pilatus Kulm, Switzerland <i>E. Ruoss, C.A. Burga &amp; J. Eschmann</i>	143

<b>Chapter C Aspects of global change in the Alps and in the high arctic region</b>	<b>153</b>
Long-term monitoring of mountain peaks in the Alps <i>G. Grabherr, M. Gottfried &amp; H. Pauli</i>	153
Monitoring of Eastern and Southern Swiss Alpine timberline ecotones <i>C.A. Burga &amp; R. Perret</i>	179
Observed changes in vegetation in relation to climate warming <i>G. Carraro, P. Gianoni, R. Mossi, F. Klötzli &amp; G.-R. Walther</i>	195
Laurophyllisation - A sign of a changing climate? <i>G.-R. Walther</i>	207
Changes of plant community patterns, phytomass and carbon balance in a high arctic tundra ecosystem under a climate of increasing cloudiness <i>I. Möller, C. Wüthrich &amp; D. Thannheiser</i>	225
