Mantle Plumes: 
Their Identification Through Time

Contents

Introduction ........................................................................................................................................... 1

Section I: Overview

1. Identification of ancient mantle plumes .......................................................................................... 5
   Ian H. Campbell

Section II: Lessons from Mesozoic and Cenozoic examples

2. Cenozoic plume evolution and flood basalts in Yemen:  
   A key to understanding older examples ......................................................................................... 23
   Martin Menzies, Joel Baker, and Gilles Chazot

3. Intraplate magmatism related to short-wavelength convective instabilities in the upper 
   mantle: Evidence from the Tertiary-Quaternary volcanic province of western and 
   central Europe ................................................................................................................................. 37
   Marjorie Wilson and Robert Patterson

4. Large igneous provinces: Progenitors of some ophiolites? ......................................................... 59
   Millard F. Coffin and Olava Eldholm

5. The location of mantle-plume centers during the initial stages of Gondwana breakup ........... 71
   Bryan C. Storey, Philip T. Leat, and Julie K. Ferris

Section III. Lessons from Mars and Venus

6. Large flow fields on Venus: Implications for plumes, rift associations, and resurfacing ........ 81
   Kari P. Magee and James W. Head

7. Contractional effects of mantle plumes on Earth, Mars, Venus ................................................. 103
   Daniel Mège and Richard E. Ernst

8. Uniformitarian plume tectonics: The post-Archean Earth and Mars ........................................ 141
   Daniel Mège

9. Concentric dikes on the flanks of Pavonis Mons: Implications for the evolution of martian shield volcanoes and mantle plumes ................................................................. 165
   Laurent G.J. Montési

Section IV: Techniques to locate plumes

10. Elevation as indicator of mantle-plume activity ......................................................................... 183
    A.M. Celâl Şengör

11. The sedimentary record of mantle-plume uplift ......................................................................... 227
    Robert H. Rainbird and Richard E. Ernst
12. The use of mafic dike swarms in identifying and locating mantle plumes ............................................. 247
   Richard E. Ernst and Kenneth L. Buchan

13. Carbonatites: Relationships to mantle-plume activity .......................................................... 267
   Keith Bell

   Don Schissel and Ross Smail

Section V: Early Precambrian plumes

15. Oceanic upwelling and mantle-plume activity: Paleomagnetic tests of ideas on the source of the Fe in early Precambrian iron formations .......................................................... 323
   Dallas Abbott and Ann Isley

16. Archean mantle plumes: Evidence from greenstone belt geochemistry ................................. 341
   Kirsty Y. Tomlinson and Kent C. Condie

17. The oldest continental and oceanic plateaus: Geochemistry of basalts and komatiites of the Pilbara Craton, Australia ................................................................. 359
   Nicholas Arndt, Gudrun Bruzak, and Thomas Reischmann

Section VI: Compilations

18. Rifts of the world ........................................................................................................ 389
   A.M. Celâl Şengör and Boris A. Natal’în

19. Large mafic magmatic events through time and links to mantle-plume heads ........................ 483
   Richard E. Ernst and Kenneth L. Buchan

Index .............................................................................................................................................. 577
