Directions in Mathematical Quasicrystals

Michael Baake
Robert V. Moody
Editors

The Centre de Recherches Mathématiques (CRM) of the Université de Montréal was created in 1968 to promote research in pure and applied mathematics and related disciplines. Among its activities are special theme years, summer schools, workshops, postdoctoral programs, and publishing. The CRM is supported by the Université de Montréal, the Province of Québec (FCAR), and the Natural Sciences and Engineering Research Council of Canada. It is affiliated with the Institut des Sciences Mathématiques (ISM) of Montréal, whose constituent members are Concordia University, McGill University, the Université de Montréal, the Université du Québec à Montréal, and the École Polytechnique. The CRM may be reached on the Web at www.crm.umontreal.ca.
Contents

Preface vii

Self-Similar Measures for Quasicrystals 1
   Michael Baake and Robert V. Moody

Fourier Analysis of Deformed Model Sets 43
   Guillaume Bernuau and Michel Duneau

Mathematical Quasicrystals and the Problem of Diffraction 61
   Jeffrey C. Lagarias

Designer Quasicrystals: Cut-and-Project Sets with Pre-Assigned Properties 95
   Peter A. B. Pleasants

Generalized Model Sets and Dynamical Systems 143
   Martin Schlottmann

On Shelling Icosahedral Quasicrystals 161
   Alfred Weiss

Tilings, $C^*$-algebras, and $K$-theory 177
   Johannes Kellendonk and Ian F. Putnam

Hulls of Aperiodic Solids and Gap Labeling Theorems 207
   J. Bellissard, D. J. L. Herrmann, and M. Zarrouati

Quasicrystals, Parametric Density, and Wulff-Shape 259
   Károly Böröczky, Jr., Uwe Schnell, and Jörg M. Wills

Gordon-Type Arguments in the Spectral Theory of One-Dimensional
Quasicrystals 277
   David Damanik

The Planar Dimer Model with Boundary: A Survey 307
   Richard Kenyon

Digit Tiling of Euclidean Space 329
   Andrew Vince

A Guide to Quasicrystal Literature 371
   Michael Baake and Uwe Grimm

Index 375
