X-ray photograph of zinc blende (Friedrich, Knipping and von Laue, 1912)  xiv
X-ray photograph of deoxyribonucleic acid (Franklin and Gosling, 1952)  xv

1 Crystals and crystal structures  
1.1 The nature of the crystalline state 1  
1.2 Constructing crystals from close-packed hexagonal layers of atoms 5  
1.3 Unit cells of the hcp and ccp structures 6  
1.4 Constructing crystals from square layers of atoms 9  
1.5 Constructing body-centred cubic crystals 9  
1.6 Interstitial structures 10  
1.7 Some simple ionic and covalent structures 18  
1.8 Representing crystals in projection: crystal plans 18  
1.9 Stacking faults and twins 20  
1.10 Introduction to some more complex crystal structures 26  
  1.10.1 Tetrahedral and octahedral structures—silicon carbide and alumina 26  
  1.10.2 Silicate structures 28  
  1.10.3 The structures of carbon 33  
Exercises 40

2 Two-dimensional patterns, lattices and symmetry 41  
2.1 Approaches to the study of crystal structures 41  
2.2 Two-dimensional patterns and lattices 42  
2.3 Two-dimensional symmetry elements 44  
2.4 The five plane lattices 47  
2.5 The seventeen plane groups 50  
2.6 One-dimensional symmetry: border or frieze patterns 55  
2.7 Symmetry in art and design: counterchange patterns 55  
2.8 Non-periodic patterns and tilings 59  
Exercises 63

3 Bravais lattices and crystal systems 67  
3.1 Introduction 67  
3.2 The fourteen space (Bravais) lattices 67  
3.3 The symmetry of the fourteen Bravais lattices: crystal systems 71  
3.4 The coordination or environments of Bravais lattice points: space-filling polyhedra 74  
Exercises 77
4 Crystal symmetry: point groups, space groups, symmetry-related properties and quasiperiodic crystals

Contents

6.5.4  d-spacing of lattice planes (hkl)  132
6.5.5  Angle ρ between plane normals (h₁k₁l₁) and (h₂k₂l₂)  132
6.5.6  Definition of a*, b*, c*, in terms of a, b, c  132
6.5.7  Zone axis at intersection of planes (h₁k₁l₁) and (h₂k₂l₂)  133
6.5.8  A plane containing two directions [u₁v₁w₁] and [u₂v₂w₂]  133
Exercises  133

7  The diffraction of light  134
  7.1  Introduction  134
  7.2  Simple observations of the diffraction of light  136
  7.3  The nature of light: coherence, scattering and interference  140
  7.4  Analysis of the geometry of diffraction patterns from gratings and nets  143
  7.5  The resolving power of optical instruments, the telescope, camera, microscope and the eye  150
Exercises  159

8  X-ray diffraction: the contributions of Max von Laue, W. H. and W. L. Bragg and P. P. Ewald  160
  8.1  Introduction  160
  8.2  Laue’s analysis of X-ray diffraction: the three Laue equations  161
  8.3  Bragg’s analysis of X-ray diffraction: Bragg’s law  163
  8.4  Ewald’s synthesis: the reflecting sphere construction  166
Exercises  169

9  The diffraction of X-rays  170
  9.1  Introduction  170
  9.2  The intensities of X-ray diffracted beams: the structure factor equation and its applications  174
  9.3  The broadening of diffracted beams: reciprocal lattice points and nodes  180
  9.4  Fixed θ, varying λ X-ray techniques: the Laue method  183
  9.5  Fixed λ, varying θ X-ray techniques: oscillation, rotation and precession methods  185
      9.5.1  The oscillation method  185
      9.5.2  The rotation method  188
      9.5.3  The precession method  188
  9.6  X-ray diffraction from single crystal thin films and multilayers  192
  9.7  X-ray (and neutron) diffraction from ordered crystals  196
Exercises  199
## Contents

### 10 X-ray diffraction of polycrystalline materials 200

10.1 Introduction 200
10.2 The geometrical basis of polycrystalline (powder) X-ray diffraction techniques 201
10.3 Some applications of X-ray techniques in polycrystalline materials 210
   10.3.1 Accurate lattice parameter measurements 210
   10.3.2 Identification of unknown phases 211
   10.3.3 Measurement of crystal (grain) size 213
   10.3.4 Measurement of internal elastic strains 214
10.4 Preferred orientation (texture, fabric) and its measurement 214
   10.4.1 Fibre textures 215
   10.4.2 Sheet textures 216
10.5 X-ray diffraction pattern of DNA: simulation by light diffraction 219
Exercises 225

### 11 Electron diffraction and its applications 228

11.1 Introduction 228
11.2 The Ewald reflecting-sphere construction for electron diffraction 229
11.3 The analysis of electron diffraction patterns 231
11.4 Applications of electron diffraction 234
   11.4.1 Determining orientation relationships between crystals 234
   11.4.2 Identification of polycrystalline materials 236
   11.4.3 Identification of quasiperiodic crystals 237
Exercises 238

### 12 The stereographic projection and its uses 242

12.1 Introduction 242
12.2 Construction of the stereographic projection of a cubic crystal 246
12.3 Manipulation of the stereographic projection: use of the Wulff net 249
12.4 Stereographic projections of non-cubic crystals 251
12.5 Applications of the stereographic projection 254
   12.5.1 Representation of point group symmetry 254
   12.5.2 Representation of orientation relationships 255
   12.5.3 Representation of preferred orientation (texture or fabric) 257
Exercises 260

Appendix 1 Useful components for crystallography model-building and suppliers 261
Appendix 2 Computer programs in crystallography 263
Appendix 3 Biographical notes on crystallographers and scientists mentioned in the text 267
Appendix 4 Some useful crystallographic relationships 287
