Part 1 Principles of Environmental Fluid Mechanics

1.	Preli	minary Concepts	1
	1.1	Introduction	1
	1.2	Properties of Fluids	4
	1.3	Mathematical Preliminaries	8
	1.4	Dimensional Reasoning	27
	Prob	lems	32
	Supp	elemental Reading	43
2.	Fund	lamental Equations	45
	2.1	Introduction	45
	2.2	Fluid Velocity, Pathlines, Streamlines, and	
		Streaklines	45
	2.3	Rate of Strain, Vorticity, and Circulation	48
	2.4	Lagrangian and Eulerian Approaches	52
	2.5	Conservation of Mass	56
	2.6	Conservation of Momentum	60
	2.7	The Equations of Motion and Constitutive Equations	65
	2.8	Conservation of Energy	71
	2.9	Scaling Analyses for Governing Equations	75
	Problems		87
	Supplemental Reading		123
3.	Visc	ous Flows	125
	3.1	Various Forms of the Equations of Motion	125
	3.2	One-Directional Flows	128

Conter	ıts
--------	-----

	3.3 3.4 3.5 Prob Supp	Creeping Flows Unsteady Flows Numerical Simulation Considerations lems lemental Reading	134 137 139 143 162
4.	Invis	Inviscid Flows and Potential Flow Theory	
	4.1	Introduction	163
	4.2	Two-Dimensional Flows and the Complex Potential	164
	4.3	Flow Through Porous Media	179
	4.4	Calculation of Forces	185
	4.5	Numerical Simulation Considerations	192
	Prob	lems	200
	Supp	lemental Reading	209
5.	Intro	duction to Turbulence	211
	5.1	Introduction	211
	5.2	Definitions	212
	5.3	Frequency Analysis	220
	5.4	Stability Analysis	226
	5.5	Turbulence Modeling	232
	5.6	Scales of Turbulent Motion	242
	Problems		245
	Supp	lemental Reading	250
6.	Boundary Layers		
	6.1	Introduction	251
	6.2	The Equations of Motion for Boundary Layers	252
	6.3	The Integral Approach of Von Karman	258
	6.4	Laminar Boundary Layers	262
	6.5	Turbulent Boundary Layers	264
	6.6	Application of the Boundary Layer Concept to Heat	
		and Mass Transfer	266
	Problems		269
	Supplemental Reading		274
7.	Surface Water Flows		
	7.1	Introduction	277
	7.2	Hydraulic Characteristics of Open Channel Flow	277
	7.3	Application of the Energy Conservation Principle	289
	7.4	Application of the Momentum Conservation Principle	296
	7.5	Velocity Distribution in Open Channel Flow	299

 7.6 Gradually Varied Flow 7.7 Circulation in Lakes and Reservoirs Problems Supplemental Reading 8. Surface Water Waves 8.1 Introduction 8.2 The Wave Equation 8.3 Gravity Surface Waves 8.4 Sinusoidal Surface Waves on Deep Water 8.5 Sinusoidal Surface Waves for Shallow Water Depth 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor – Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics	
 7.7 Circulation in Lakes and Reservoirs Problems Supplemental Reading 8. Surface Water Waves 8.1 Introduction 8.2 The Wave Equation 8.3 Gravity Surface Waves 8.4 Sinusoidal Surface Waves on Deep Water 8.5 Sinusoidal Surface Waves for Shallow Water Depth 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor–Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes 	306
 Problems Supplemental Reading 8. Surface Water Waves 8.1 Introduction 8.2 The Wave Equation 8.3 Gravity Surface Waves 8.4 Sinusoidal Surface Waves on Deep Water 8.5 Sinusoidal Surface Waves for Shallow Water Depth 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor-Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes 	319
 Supplemental Reading 8. Surface Water Waves 8.1 Introduction 8.2 The Wave Equation 8.3 Gravity Surface Waves 8.4 Sinusoidal Surface Waves on Deep Water 8.5 Sinusoidal Surface Waves for Shallow Water Depth 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor–Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes 	328
 8. Surface Water Waves 8.1 Introduction 8.2 The Wave Equation 8.3 Gravity Surface Waves 8.4 Sinusoidal Surface Waves on Deep Water 8.5 Sinusoidal Surface Waves for Shallow Water Depth 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor–Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes 	359
 8.1 Introduction 8.2 The Wave Equation 8.3 Gravity Surface Waves 8.4 Sinusoidal Surface Waves on Deep Water 8.5 Sinusoidal Surface Waves for Shallow Water Depth 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor–Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	361
 8.2 The Wave Equation 8.3 Gravity Surface Waves 8.4 Sinusoidal Surface Waves on Deep Water 8.5 Sinusoidal Surface Waves for Shallow Water Depth 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor-Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	361
 8.3 Gravity Surface Waves 8.4 Sinusoidal Surface Waves on Deep Water 8.5 Sinusoidal Surface Waves for Shallow Water Depth 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor–Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	362
 8.4 Sinusoidal Surface Waves on Deep Water 8.5 Sinusoidal Surface Waves for Shallow Water Depth 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor-Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	364
 8.5 Sinusoidal Surface Waves for Shallow Water Depth 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor-Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	366
 8.6 The Group Velocity 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor—Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	372
 8.7 Waves in Open Channels 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor-Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	378
 8.8 Numerical Aspects Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor-Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes 	382
 Problems Supplemental Reading 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor–Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	393
 Supplemental Reading Geophysical Fluid Motions Introduction General Concepts The Taylor-Proudman Theorem Wind-Driven Currents (Ekman Layer) Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes 	395
 9. Geophysical Fluid Motions 9.1 Introduction 9.2 General Concepts 9.3 The Taylor-Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes 	400
 9.1 Introduction 9.2 General Concepts 9.3 The Taylor-Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	401
 9.2 General Concepts 9.3 The Taylor-Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	401
 9.3 The Taylor-Proudman Theorem 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	402
 9.4 Wind-Driven Currents (Ekman Layer) 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes 	409
 9.5 Vertically Integrated Equations of Motion Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes 	411
Problems Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	415
Supplemental Reading Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	417
Part 2 Applications of Environmental Fluid Mechanics 10. Environmental Transport Processes	421
Part 2 Applications of Environmental Fluid Mechanics10. Environmental Transport Processes	
10. Environmental Transport Processes	
•	423
10.1 Introduction	423

10.2	Basic Definitions, Advective Transport	426
10.3	Diffusion	427
10.4	The Advection–Diffusion Equation	431
10.5	Dispersion	438
10.6	Dispersion in Porous Media	446
10.7	Analytical Solutions to the Advection-Diffusion	
	Equation	451
10.8	Numerical Solutions to the Advection-Diffusion	
	Equation	466
Probl	lems	473

Contents

11.	Grou	ndwater Flow and Quality Modeling	489
	11.1	Introduction	489
	11.2	The Approximation of Dupuit	490
	11.3	Contaminant Transport	496
	11.4	Saltwater Intrusion into Aquifers	506
	11.5	Non-Aqueous Phase Liquid (NAPL) in Groundwater	511
	11.6	Numerical Modeling Aspects	515
	Proble	ems	522
	Suppl	emental Reading	532
12.	Excha	ange Processes at the Air/Water Interface	533
	12.1	Introduction	533
	12.2	Momentum Transport	533
	12.3	Solar Radiation and Surface Heat Transfer	539
	12.4	Exchange of Gases	552
	12.5	Measurement of Gas Mass Transfer Coefficients	564
	Probl	ems	568
	Supplemental Reading		573
13.	Topics in Stratified Flow		575
	13.1	Buoyancy and Stability Considerations	575
	13.2	Internal Waves	581
	13.3	Mixing	591
	13.4	Double-Diffusive Convection	603
	13.5	Mixed-Layer Modeling	609
	Probl	ems	617
	Suppl	emental Reading	618
14.	Dynamics of Effluents		621
	14.1	Jets and Plumes	621
	14.2	Submerged Discharges and Multiport Diffuser Design	631
	14.3	Surface Buoyant Discharges	635
	Problems		645
	Supplemental Reading		646
15.	Sediment Transport		647
	15.1	Introduction	647
	15.2	Hydraulic Properties of Sediments	649
	15.3	Bed-Load Calculations	653
	15.4	Suspended Sediment Calculations	659
	15.5	Particle Interactions	668
	15.6	Particle-Associated Contaminant Transport	676
