Restricted Orbit Equivalence for Actions of Discrete Amenable Groups

Janet Whalen Kammeyer
Daniel J. Rudolph
# Contents

1 Introduction

1.1 Overview
1.2 A roadmap to the text
1.3 History and references
1.4 Directions for further study

2 Definitions and Examples

2.1 Orbits, arrangements and rearrangements
2.2 Definition of a size and $m$-equivalence
2.3 Seven examples

3 The Ornstein-Weiss Machinery

4 Copying Lemmas

5 $m$-entropy

6 $m$-joinings

6.1 Polish topologies

6.1.1 Overview of the topology on $m$-joinings
6.2 Modeling pairs of arrangements
6.3 Modeling rearrangements
6.4 Adding sizes to the picture
6.5 More orbit joinings and $m$-joinings

7 The Equivalence Theorem

7.1 Perturbing an $m$-equivalence
7.2 The $\overline{m}$-distance and $m$-finitely determined processes
7.3 The equivalence theorem
