Homotopy Theory of Diagrams

Wojciech Chachólski
Jérôme Scherer
Contents

Introduction 1

Chapter I. Model approximations and bounded diagrams 5
  1. Notation 5
  2. Model categories 6
  3. Left derived functors 12
  4. Left derived functors of colimits and left Kan extensions 14
  5. Model approximations 16
  6. Spaces and small categories 19
  7. The pull-back process and local properties 22
  8. Colimits of diagrams indexed by spaces 22
  9. Left Kan extensions 24
  10. Bounded diagrams 26

Chapter II. Homotopy theory of diagrams 29
  11. Statements of the main results 29
  12. Cofibrations 30
  13. $Fun^K(M)$ as a model category 32
  14. Ocolimit of bounded diagrams 35
  15. Bousfield-Kan approximation of $Fun(I,C)$ 36
  16. Homotopy colimits and homotopy left Kan extensions 37
  17. Relative boundedness 38
  18. Reduction process 40
  19. Relative cofibrations 44
  20. Cofibrations and colimits 46
  21. $Fun^b_f(L,M)$ as a model category 48
  22. Cones 49
  23. Diagrams indexed by cones I 51

Chapter III. Properties of homotopy colimits 54
  24. Fubini theorem 54
  25. Bounded diagrams indexed by Grothendieck constructions 57
  26. Thomason's theorem 59
  27. Étale spaces 63
  28. Diagrams indexed by cones II 67
  29. Homotopy colimits as étale spaces 69
  30. Cofinality 70
  31. Homotopy limits 71

Appendix A. Left Kan extensions preserve boundedness 75
