Contents

Preface	ix
1 Introduction	1
1.1 Background	1
1.2 Scope	1
1.3 Notation	5
1.4 Distributions related to the Normal distribution	6
1.5 Quadratic forms	9
1.6 Estimation	10
1.7 Exercises	14
2 Model Fitting	17
2.1 Introduction	17
2.2 Examples	17
2.3 Some principles of statistical modelling	30
2.4 Notation and coding for explanatory variables	35
2.5 Exercises	38
3 Exponential Family and Generalized Linear Models	43
3.1 Introduction	43
3.2 Exponential family of distributions	44
3.3 Properties of distributions in the exponential family	46
3.4 Generalized linear models	49
3.5 Examples	50
3.6 Exercises	53
4 Estimation	57
4.1 Introduction	57
4.2 Example: Failure times for pressure vessels	57
4.3 Maximum likelihood estimation	62
4.4 Poisson regression example	64
4.5 Exercises	67
5 Inference	69
5.1 Introduction	69
5.2 Sampling distribution for score statistics	70

5.3	Taylor series approximations	72
5.4	Sampling distribution for maximum likelihood estimators	73
5.5	Log-likelihood ratio statistic	75
5.6	Sampling distribution for the deviance	76
5.7	Hypothesis testing	80
5.8	Exercises	82
6	Normal Linear Models	85
6.1	Introduction	85
6.2	Basic results	85
6.3	Multiple linear regression	90
6.4	Analysis of variance	95
6.5	Analysis of covariance	106
6.6	General linear models	108
6.7	Exercises	110
7	Binary Variables and Logistic Regression	115
7.1	Probability distributions	115
7.2	Generalized linear models	116
7.3	Dose response models	116
7.4	General logistic regression model	121
7.5	Goodness of fit statistics	124
7.6	Residuals	127
7.7	Other diagnostics	128
7.8	Example: Senility and WAIS	129
7.9	Exercises	131
8	Nominal and Ordinal Logistic Regression	135
8.1	Introduction	135
8.2	Multinomial distribution	135
8.3	Nominal logistic regression	137
8.4	Ordinal logistic regression	143
8.5	General comments	147
8.6	Exercises	148
9	Count Data, Poisson Regression and Log-Linear Models	151
9.1	Introduction	151
9.2	Poisson regression	152
9.3	Examples of contingency tables	156
9.4	Probability models for contingency tables	161
9.5	Log-linear models	162
9.6	Inference for log-linear models	164
9.7	Numerical examples	164
9.8	Remarks	167
9.9	Exercises	168

10 Survival Analysis	171
10.1 Introduction	171
10.2 Survivor functions and hazard functions	173
10.3 Empirical survivor function	177
10.4 Estimation	180
10.5 Inference	182
10.6 Model checking	183
10.7 Example: remission times	185
10.8 Exercises	187
11 Clustered and Longitudinal Data	191
11.1 Introduction	191
11.2 Example: Recovery from stroke	193
11.3 Repeated measures models for Normal data	197
11.4 Repeated measures models for non-Normal data	202
11.5 Multilevel models	203
11.6 Stroke example continued	206
11.7 Comments	207
11.8 Exercises	209
Software	213
References	215
Index	221
