Preface	xiii
1 Introduction	1
1.1 Environmental Problems and the Need for Geochemical Modeling	1
1.1.1 High-Level Radioactive Waste Disposal	1
1.1.2 Mining Related Environmental Issues	4
1.1.3 Landfills	8
1.1.4 Deep Well Injection of Hazardous Wastes	8
1.1.5 Artificial Recharge to Aquifers	9
1.2 The Regulatory Framework	11
1.2.1 CERCLA or Superfund	11
1.2.2 RCRA	11
1.2.3 NEPA	11
1.2.4 Clean Water Act	12
1.2.5 Safe Drinking Water Act	12
1.3 The Role of Geochemical Modeling	12
1.3.1 Contamination Issues	12
1.3.2 Water Resource Issues	13
1.4 Current Practice	14
1.4.1 Model Usage	14
1.4.2 The State of the Art	16
1.5 Overview	16
2 Model Concepts	18
2.1 Model Definitions	18
2.2 A Holistic View of Geochemical Models	19
2.3 Types of Geochemical Models	23
2.3.1 Speciation–solubility Models	23
2.3.2 Reaction Path Models	24
2.3.3 Inverse Mass Balance Models	26
2.3.4 Coupled Mass Transport Models	27
2.4 Model Verification and Validation	28
2.5 Model Usefulness and Limitations	30

3	Thermodynamic Background	32
3.1	Systems and Equilibrium	32
3.1.1	Real and Model Systems	32
3.1.2	Equilibrium	33
3.1.3	The Role of Kinetics	34
3.2	Chemical Reactions	34
3.3	Gibbs Energy	35
3.3.1	Enthalpy and Entropy	36
3.4	Activity, Fugacity, and Chemical Potential	37
3.4.1	Activity and Fugacity	37
3.4.2	Activity Coefficients	38
3.4.3	Chemical Potential	42
3.5	The Equilibrium Constant	42
3.5.1	Direct and Indirect Determination of K values	44
3.5.2	Solubility Product and Saturation Index	44
3.5.3	Dependence of K on Temperature	45
3.6	Components and Species	46
3.6.1	Components and the Basis	46
3.6.2	Species	46
3.6.3	An Alternative Basis	47
3.7	The Phase Rule	51
3.7.1	The Extensive Phase Rule	53
3.8	Redox	54
3.8.1	Oxygen Fugacity, $\log f_{O_2}$	55
3.8.2	Redox Potential, E_h	57
3.8.3	Electron Potential, pe	58
3.9	Alkalinity	58
3.9.1	The Carbonate Component	59
3.9.2	Carbonate Speciation	59
3.9.3	Titration Alkalinity	61
3.9.4	The Alkalinity to Carbonate Component Correction	63
3.10	Acidity	65
3.10.1	Titration Acidity	65
3.10.2	The Acidity to Carbonate Component Correction	66
3.10.3	Alkalinity and Acidity: A Summary	67
3.11	The Local Equilibrium Assumption	67
3.11.1	Scales of Interest	69
3.11.2	Calculation of t_{eq} and l_{eq}	69
3.12	Summary	73
4	Computer Programs for Geochemical Modeling	74
4.1	Codes, Databases, and Models	74
4.1.1	The Code	74
4.1.2	The Database	75
4.2	Review of Popular Computer Programs	76
4.3	Databases	79

4.3.1	A Typical Database	79
4.3.2	Data Quality	81
4.4	Chemical Concentration Units	83
4.5	Examples of Input/Output	83
4.5.1	Program Input	83
4.5.2	Program Output	90
5	Preparation and Construction of a Geochemical Model	92
5.1	Introduction	92
5.2	Establish the Goals	92
5.3	Learn the Groundwater Flow System	92
5.4	Collection of Field and Laboratory Data	93
5.4.1	Decide Which Parameters to Measure for Groundwater	93
5.4.2	Characterize the Solids	93
5.4.3	Evaluate Quality of Water Analyses. Charge Balance I	94
5.5	Decide What Types of Model to Construct	97
5.6	Gather Chemical Properties	101
5.7	Select a Computer Code	101
5.8	Set Up a Model	102
5.8.1	Basis Swapping	102
5.8.2	Charge Balance II	102
5.9	Interpretation of Modeling Results	103
5.9.1	Accuracy and Completeness of the Database	103
5.9.2	Input Constraints	104
5.9.3	Who Produced the Model?	104
5.10	Reporting and Presentation of Modeling Results	105
6	Speciation and Solubility Modeling	106
6.1	Introduction	106
6.2	A Uranium Mill Tailings Impoundment	107
6.2.1	The Site	107
6.2.2	The Purpose of Geochemical Modeling	108
6.2.3	Site Geology and Data	111
6.2.4	Selection of Modeling Code and Model Input	112
6.2.5	Geochemical Modeling	113
6.2.6	Modeling Results	114
6.2.7	Analysis of Mineral Saturation Indices	114
6.2.8	Activity–Activity Diagrams	121
6.2.9	Geochemical Evolution Along A Flow Path	123
6.2.10	Comments on the Bear Creek Site	125
6.3	Applications to Bioavailability and Risk Assessment Studies	126
6.4	Interpretations of Column Experiments	128

7	Modeling Surface Adsorption	133
7.1	Introduction	133
7.1.1	The Solid–Water Interface	133
7.2	Ion-exchange	134
7.2.1	Cation-exchange Capacity	134
7.2.2	Exchange Reactions	135
7.2.3	Isotherms	136
7.2.4	Ion-exchange vs. Surface Complexation	138
7.3	Surface Complexation	138
7.3.1	The Electrical Double layer	139
7.3.2	Other Surface Models	142
7.4	Sorption Implementation in Computer Programs	142
7.4.1	Examples	143
7.4.2	Why Surface Modeling is Not Perfect	148
7.5	Retardation of Radionuclides at Oak Ridge	148
7.6	Mobility of Radionuclides at a Uranium Mill Tailings Impoundment	151
7.6.1	Why Geochemical Modeling?	152
7.6.2	Modeling Approach	152
7.6.3	Modeling Results	153
7.6.4	Comparison with Field Data	153
7.6.5	Discussion of Modeling Results	155
7.7	Adsorption of Arsenic in Smelter Flue Dust	155
8	Reaction Path Modeling	157
8.1	Introduction	157
8.2	Alkalinity Titration	159
8.3	Acidity of Acid Mine Water	161
8.4	pH Buffering	164
8.5	Deep Well Injection of Hazardous Wastes	167
8.5.1	Background	167
8.5.2	A Case Study	168
8.6	Pit Lake Chemistry	174
8.7	Artificial Recharge	177
8.8	Applications to Natural Background Studies	178
9	Inverse Mass Balance Modeling	180
9.1	Introduction	180
9.2	Model Assumptions	181
9.3	Groundwater Genesis, Black Mesa, Arizona	183
9.4	Acid Mine Drainage, Pinal Creek, Arizona	187
9.5	¹⁴ C dating, Black Mesa, Arizona	192
9.6	Estimate of Microbial Metabolism Rates in Deep Aquifers	195
9.6.1	Chapelle and Lovley (1990)	195
9.6.2	Murphy and Schramke (1998)	197

10 Coupled Reactive Transport Models	199
10.1 Introduction	199
10.2 Multi-component Reactive Transport Models	200
10.3 Isotherm-based Reactive Transport Models	201
10.3.1 Linear Isotherm, K_d	201
10.3.2 Freundlich Isotherm	202
10.3.3 Langmuir Isotherm	202
10.3.4 Applicability of the Isotherm or Retardation-factor-based Reactive Transport Models	202
10.4 A Simple Example	205
10.5 Buffering in Reactive Transport	211
10.5.1 The Buffer Concept	211
10.5.2 Application of the Buffer Concept	212
10.6 Migration of an Acid Plume at a Uranium Mill Tailings Site	215
10.6.1 Model Description	215
10.6.2 Modeling Results	218
10.7 Remedial Design of a Uranium Tailings Repository	225
10.8 Summary and Comments	229
11 Kinetics Modeling	230
11.1 Introduction	230
11.2 Some Basic Theory	230
11.2.1 The Progress Variable	230
11.2.2 The Reaction Rate	232
11.2.3 Rate Laws	233
11.2.4 Temperature Dependence of Rate Constants	235
11.3 Kinetics of Precipitation and Dissolution Reactions	237
11.4 Kinetics of Acetate Decomposition	241
11.5 Coupled Aqueous Speciation and Biological Processes	247
11.6 Application to Landfill Leachate into Aquifers	249
11.7 Conclusions	251
Appendix	253
A Modifying a Database	253
A.1 Why Modify a Database?	253
A.1.1 Adding Arsenic Data to PHREEQC	254
References	261
Index	281
