

Piotr Mikusiński
Michael D. Taylor

An Introduction to
Multivariable Analysis
from Vector to Manifold

Birkhäuser
Boston • Basel • Berlin

CONTENTS

Preface	vii
1 Vectors and Volumes	1
1.1 Vector Spaces	1
1.2 Some Geometric Machinery for \mathbb{R}^N	3
1.3 Transformations and Linear Transformations	6
1.4 A Little Matrix Algebra	8
1.5 Oriented Volume and Determinants	10
1.6 Properties of Determinants	13
1.7 Linear Independence, Linear Subspaces, and Bases	22
1.8 Orthogonal Transformations	30
1.9 K -dimensional Volume of Parallelepipeds in \mathbb{R}^N	34
2 Metric Spaces	43
2.1 Metric Spaces	43
2.2 Open and Closed Sets	49
2.3 Convergence	53
2.4 Continuous Mappings	58
2.5 Compact Sets	62
2.6 Complete Spaces	66
2.7 Normed Spaces	70
3 Differentiation	75
3.1 Rates of Change and Derivatives as Linear Transformations	75

3.2	Some Elementary Properties of Differentiation	83
3.3	Taylor's Theorem, the Mean Value Theorem, and Related Results	87
3.4	Norm Properties	92
3.5	The Inverse Function Theorem	95
3.6	Some Consequences of the Inverse Function Theorem	101
3.7	Lagrange Multipliers	109
4	The Lebesgue Integral	113
4.1	A Bird's-Eye View of the Lebesgue Integral	113
4.2	Integrable Functions	122
4.3	Absolutely Integrable Functions	130
4.4	Series of Integrable Functions	132
4.5	Convergence Almost Everywhere	135
4.6	Convergence in Norm	137
4.7	Important Convergence Theorems	140
4.8	Integrals Over a Set	143
4.9	Fubini's Theorem	147
5	Integrals on Manifolds	153
5.1	Introduction	153
5.2	The Change of Variables Formula	155
5.3	Manifolds	163
5.4	Integrals of Real-valued Functions over Manifolds	174
5.5	Volumes in \mathbb{R}^N	182
6	K-Vectors and Wedge Products	189
6.1	K -Vectors in \mathbb{R}^N and the Wedge Product	189
6.2	Properties of \wedge	196
6.3	Wedge Product and a Characterization of Simple K -Vectors	203
6.4	The Dot Product and the Star Operator	209
7	Vector Analysis on Manifolds	219
7.1	Oriented Manifolds and Differential Forms	219
7.2	Induced Orientation, the Differential Operator, and Stokes' Theorem; What We Can Learn from Simple Cubes	230
7.3	Integrals and Pullbacks	242
7.4	Stokes' Theorem for Chains	252
7.5	Stokes' Theorem for Oriented Manifolds	260
7.6	Applications	269
7.7	Manifolds and Differential Forms: An Intrinsic Point of View	277
	References	291
	Index	293
