Contents

1 Some topics in commutative algebra
   1.1 Tensor products
      1.1.1 Tensor product of modules
      1.1.2 Right-exactness of the tensor product
      1.1.3 Tensor product of algebras
   1.2 Flatness
      1.2.1 Left-exactness: flatness
      1.2.2 Local nature of flatness
      1.2.3 Faithful flatness
   1.3 Formal completion
      1.3.1 Inverse limits and completions
      1.3.2 The Artin–Rees lemma and applications
      1.3.3 The case of Noetherian local rings

2 General properties of schemes
   2.1 Spectrum of a ring
      2.1.1 Zariski topology
      2.1.2 Algebraic sets
   2.2 Ringed topological spaces
      2.2.1 Sheaves
      2.2.2 Ringed topological spaces
   2.3 Schemes
      2.3.1 Definition of schemes and examples
      2.3.2 Morphisms of schemes
      2.3.3 Projective schemes
      2.3.4 Noetherian schemes, algebraic varieties
   2.4 Reduced schemes and integral schemes
      2.4.1 Reduced schemes

7.4 Algebraic curves
  7.4.1 Classification of curves of small genus  284
  7.4.2 Hurwitz formula  289
  7.4.3 Hyperelliptic curves  292
  7.4.4 Group schemes and Picard varieties  297

7.5 Singular curves, structure of Pic\(^0\)(X)  303

8 Birational geometry of surfaces  317
  8.1 Blowing-ups  317
    8.1.1 Definition and elementary properties  318
    8.1.2 Universal property of blowing-up  323
    8.1.3 Blowing-ups and birational morphisms  326
    8.1.4 Normalization of curves by blowing-up points  330
  8.2 Excellent schemes  332
    8.2.1 Universally catenary schemes and the
dimension formula  332
    8.2.2 Cohen–Macaulay rings  335
    8.2.3 Excellent schemes  341
  8.3 Fibered surfaces  347
    8.3.1 Properties of the fibers  347
    8.3.2 Valuations and birational classes of fibered surfaces  353
    8.3.3 Contraction  356
    8.3.4 Desingularization  361

9 Regular surfaces  375
  9.1 Intersection theory on a regular surface  376
    9.1.1 Local intersection  376
    9.1.2 Intersection on a fibered surface  381
    9.1.3 Intersection with a horizontal divisor,
adjunction formula  388
  9.2 Intersection and morphisms  394
    9.2.1 Factorization theorem  394
    9.2.2 Projection formula  397
    9.2.3 Birational morphisms and Picard groups  401
    9.2.4 Embedded resolutions  404
  9.3 Minimal surfaces  411
    9.3.1 Exceptional divisors and Castelnuovo's criterion  412
    9.3.2 Relatively minimal surfaces  418
    9.3.3 Existence of the minimal regular model  421
    9.3.4 Minimal desingularization and minimal
embedded resolution  424
9.4 Applications to contraction; canonical model 429
9.4.1 Artin’s contractability criterion 430
9.4.2 Determination of the tangent spaces 434
9.4.3 Canonical models 438
9.4.4 Weierstrass models and regular models of elliptic curves 442

10 Reduction of algebraic curves 454
10.1 Models and reductions 454
10.1.1 Models of algebraic curves 455
10.1.2 Reduction 462
10.1.3 Reduction map 467
10.1.4 Graphs 471

10.2 Reduction of elliptic curves 483
10.2.1 Reduction of the minimal regular model 484
10.2.2 Néron models of elliptic curves 489
10.2.3 Potential semi-stable reduction 498

10.3 Stable reduction of algebraic curves 505
10.3.1 Stable curves 505
10.3.2 Stable reduction 511
10.3.3 Some sufficient conditions for the existence of the stable model 521

10.4 Deligne–Mumford theorem 532
10.4.1 Simplifications on the base scheme 533
10.4.2 Proof of Artin–Winters 537
10.4.3 Examples of computations of the potential stable reduction 543
