Distributions, Integral Transforms and Applications

Wladyslaw Kierat
and
Urszula Sztaba
# CONTENTS

Preface vii

## Chapter 1. Definitions and preliminaries  1
  1.1. The spaces $\mathcal{D}$ and $\mathcal{D}'$  1
  1.2. Approximation lemmas  3
  1.3. Regularizations of functions  5
  1.4. Du Bois-Rymond's lemma  6
  1.5. Some density theorem  7
  1.6. Distributional convergence  8
  1.7. Algebraic operations on distributions  9
  1.8. Linear transformations in the space of the independent variables  10
  1.9. Differentiation of distributions  11
  1.10. Weak derivatives of locally integrable functions  12
  1.11. Local Sobolev spaces  16
  1.12. Sobolev spaces  19
  1.13. Differential equations of the second order with measures as coefficients  21

## Chapter 2. Local properties of distributions  27
  2.1. Smooth partitions of unity  27
  2.2. Approximation of functions belonging to $W^{m,p}(\Omega)$ by smooth functions  29
  2.3. Restrictions of distributions  31
  2.4. Support of distributions  33
  2.5. Distributions of finite order  35
  2.6. Cartesian products of Banach spaces  37
  2.7. Some local representations of distributions  38

## Chapter 3. Tensor products and convolution products  41
  3.1. Regularization of distributions  41
  3.2. A characterization of convolution operators  44
  3.3. Tensor product of distributions  45
  3.4. Differentiation and support of tensor product  47
  3.5. The theorem of kernels  48
  3.6. Connection between tensor product and convolution product of distributions  54
  3.7. Differentiation and support of convolution product  58

## Chapter 4. Differential equations  59
  4.1. Fundamental solutions of differential equations  59
4.2. The Cauchy problem for the wave equation with distribution data 60
4.3. Fundamental solutions of the Laplace operator and the heat operator 63
4.4. The Hörmander inequalities 66
4.5. $L^2$-solvability 70
4.6. Regularity properties of differential operators 72

Chapter 5. Particular types of distributions and Cauchy transforms 75
5.1. Integrable distributions 75
5.2. Regularization of integrable distributions 77
5.3. Tensor product of integrable distributions 78
5.4. $D_{L^p}$ and $D'_{L^p}$ spaces 81
5.5. Convolution product 82
5.6. Cauchy transforms of integrable distributions 84
5.7. Cauchy transforms of distributions belonging to $D'_{L^p}$ 87
5.8. Cauchy transforms of some distributions 91

Chapter 6. Tempered distributions and Fourier transforms 95
6.1. The spaces $S$ and $S'$ 95
6.2. Tensor product of tempered distributions 97
6.3. Fourier transforms of integrable functions 98
6.4. Formal properties of Fourier transforms 100
6.5. Fourier transforms of functions in $S$ 102
6.6. Fourier transforms of functions in $L^2(\mathbb{R}^n)$ 103
6.7. Fourier transforms of the Hermite functions 107
6.8. Fourier transforms of tempered distributions 108
6.9. Formal properties of Fourier transforms of tempered distributions 109
6.10. Fourier transforms of integrable distributions 110
6.11. Fourier transforms of square integrable distributions 112
6.12. Determining Fourier transforms of square integrable distributions 114
6.13. Hilbert transforms 116
6.15. The Paleya–Wiener type theorems 119
6.16. The Cauchy semigroup 121
6.17. The Cauchy problem for the heat equation 123

Chapter 7. Orthogonal expansions of distributions 127
7.1. The Poisson summation formula 127
7.2. Periodic distributions 128
7.3. The spaces $\mathcal{A}$ and $\mathcal{A}'$ 131
7.4. Cauchy transforms of elements of $\mathcal{A}'$ 134
7.5. The Wiener expansion of square integrable distributions 136

APPENDIX. Sequential completeness of some spaces 139
