Legume Silages for Animal Production - LEGSIL

edited by
Roger J. Wilkins and Christian Paul

Proceedings of an International Workshop supported by the EU and held in
Braunschweig, 8 - 9 July 2001
Contents

Preface

Introduction to the LEGSIL project 1

Forage legumes – productivity and composition 5
Summary of plenary discussion

Assessment of nitrate leaching from beneath forage legumes 17
Summary of plenary discussion

Ensiling of legumes 27
G. Pahlow, C. Rammer, D. Slottner and M. Tuori
Summary of plenary discussion

Intake of legume silages by sheep 33
C. Paul, H. Auerbach, and G.-J. Schild
Summary of plenary discussion

Effects of legume silages on feed intake, milk production and nitrogen efficiency 39
J. Bertilsson, R.J. Dewhurst and M. Tuori

Effects of legume silages on diet digestibility and rumen function 47
R.J. Dewhurst, R.J. Merry, J. Bertilsson, and M. Tuori
Summary of plenary discussions

Laboratory evaluation of legume quality 55
Summary of plenary discussion

Production of legumes in agro-climatic zones: models and predictions 63
C.F.E Topp and C.J. Doyle
Summary of plenary discussion

An economic assessment of the potential for increasing the use of forage legumes in north European livestock systems 75
C.J. Doyle and C.F.E. Topp
Summary of plenary discussion

Reports from Working Groups considering implications for different European regions 87
Nordic region / Maritime region / Continental region

Concluding comments 91

List of Participants 93
