THEORY, METHODOLOGY AND RESULTS OF RESEARCH IN SCIENCE EDUCATION

FOURTH EUROPEAN SCIENCE EDUCATION SUMMERSCHOOL
Marly le Roi - August 26th - September 2nd 1998

SUB Göttingen
215 761 650

Edited by Martine MÉHEUT and Gérard REBMANN
Welcome address 9

Distance work 10

Rosalind Driver (1941-1997): A tribute to her contribution to research in science education 12-30

John Leach, Center for Studies in Science and Mathematics Education, The University of Leeds, United Kingdom

Courses 31-81

Analysis of teaching and learning: how differentiating and relating them 32
Andrée Tiberghien, UMR GRIC-COAST CNRS, Université Lyon 2, France

Researching students' understanding of the procedures of scientific enquiry 46
Robin Millar, Department of Educational Studies, University of York, United Kingdom

Research on distance teaching/learning in science 58
Cécile Vander Borght, Université catholique de Louvain, Louvain-la-Neuve, Belgium

Design of chemistry labwork activities aiming at teaching basic chemical concepts 68
Jean-François Le Marechal, UMR GRIC-COAST, Lyon 2 University, France

Working groups 83-286

• Working group 1: Citizenship 85

Citizenship working group: staff report 86
Leena Aho, Faculty of Education, University of Joensuu, Finland
Jenny Frost, Institute of Education, University of London, United Kingdom

Citizenship working group: students' report 90

New approaches in physics education, links between formal and non formal science education. The project of non-formal science education schola ludus: think, do and show 92
Viera Biznarova, Departement of Non-conformal Science Education, Faculty of Mathematics and Physics, Comenius University, Bratislava, Slovakia

Understanding microbial processes in everyday and scientific conceptions 98
- a contribution to educational reconstruction
Catja Hilge, Department of biology, University of Oldenburg, Germany
Fourth European Science Education Summerschool

Conceptions of “Education” and “The Public” in international environmental agreements
Elin Kelsey, School of Education, King’s College, London, United Kingdom

Analysis of ideologies in norwegian primary school science textbooks and implications for scientific literacy
Erik Knain, Department of Teacher Education and School Development, University of Oslo, Norway

Students’ decision-making on a socio-scientific issue, and their views and ideas of scientists and scientific knowledge
Stein Dankert Kolstoe, Dept of Applied Education, University of Bergen, Norway

How does schoolwork contribute to pupils’ understanding and attitudes to science?
Britt Lindahl, Department of Math and Science, Kristianstad University, Sweden

The drama of biotechnology: Science, technology and citizenship in the case of biotechnology
Marianne Odegaard, Dept of Teacher Education and School Development, University of Oslo

The contribution of the history of physics to instructional design
Fanny Seroglou, School of Education, Aristotle University of Thessaloniki, Greece

Working group 2: Conceptions

Conceptions working group: Staff report
Bengt-Olov Molander, Department of Mathematics and Sciences, Institute of Education, Stockholm, Sweden and Roser Pinto Departement de Didactica de les Ciencias Experimentales, Universidade Autonoma de Barcelona, Spain

Conception working group: Students’ report

Teachers’ performance and curriculum design: their relationship with argumentation patterns in secondary physics classrooms
Victor M. Álvarez Pérez, Departement de Didactica das Ciencias Experimentais, University of Santiago de Compostela, Spain

Two models for a physical situation: the case of optics students’ difficulties, teachers’ viewpoints and guidelines for a “didactical structure”
Philippe Colin, L.D.P.E.S. Université Denis Diderot Paris 7, France

Children’s strategies in tackling practical investigative tasks
Zoe Kanari, University of York, United Kingdom
A study of development of mental models of the earth-sun system in secondary school students
Bernat Martinez, Department de Didáctica de les Ciencies Experimentals, University of Valencia, Spain

The beginning of physics comprehension - research project on learning processes concerning 'light and shadow' during science education in elementary school
Lydia Murmann, Institute of Physics Education, University of Bremen, Germany

Stability and nature of students' ideas concerning particle models
Jochen Peuckert, Free University, Berlin, Germany

Science, imagination and fantasy - how should we think about children's understanding? - case studies from life, evolution, dinosaurs, aliens
Loraine M. de Medeiros Schuch, Institute of Education, University of London, United Kingdom

A picture based concept mapping method as an assessment tool to investigate students' conceptions
Rüdiger Tiemann, Chemistry Department, Institute of Chemical Education, University of Essen, Germany

Making sense of student difficulties with physics: an example from mechanical waves
Michael Wittmann, Department of Physics, University of Maryland, USA

• Working group 3: Teaching and learning

Teaching and learning working group: Staff report
Laurence VIENNOT, University Paris 7 - Denis Diderot, France and Albert Chr.PAULSEN, Royal Danish School of Educational Studies, Denmark

Teaching and learning working group: Students’ report

Language: a fundamental tool in the social process of learning science
Enric Custodio, Department de Didàctica de la Matemàtica i de les Ciències Experimentals, Universitat Autònoma de Barcelona, Spain

Knowledge-centred problem solving in the domain of physics
Gunnar Friege, Institute for Science Education (IPN), Kiel, Germany

Children's conceptual change and social interaction in pre-school (5 to 6 year old) science
Sari Havu, University of Joensuu, Finland

Primary teachers teaching science - a question of confidence?
Christine Khwaja, Middlesex University, London, United Kingdom
Making sense of science teacher education
Lotta Lager-Nyqvist, Stockholm Institute of Education, Sweden

Primary teachers' understandings of the nature of science and the purposes of science education
Stephen Lunn, Centre for Science Education, Open University, England

Motivational orientation and self-view: an explanatory mechanism for the effects of a cognitive acceleration intervention program in science
Ros McLellan, King's College, London, United Kingdom

Teaching for conceptual understanding: developing and evaluating Turkish students' understanding of the solubility concept through a specific teaching intervention
Filiz Mirzalar-Kabapinar, Learning in Science Research Group, CSSME, University of Leeds, United Kingdom

- Working group 4: ICTT

"ICTT" working group report

The development of physics competence in the domain of mechanics
Jörn Gerdes, Institute of Physics Education, University of Bremen, Germany

The role of new technologies in in-service training of physics teachers
Chiara Invernizzi, Dipartimento di Fisica “A. Volta”, Università di Pavia, Italy

Information technology in cooperative problem solving in science education
Anders Jakobsson, Teachers Training School University of Lund, Malmö, Sweden

The role of different types of situated knowledge in students' understanding of the environment: design of an internet site and study of its use
Laurence Le Diouris, UMR GRIC Equipe COAST, Université Lumière Lyon2, France

Integrating different approaches in teaching statics of fluids
Ernesto Lunati, Dipartimento di Fisica “A. Volta”, Università di Pavia, Italy

The human cerebral imaging in French and Belgian secondary school
Véronique Maffeo, Lirdhist, University Claude Bernard, Lyon, France

Students' attitude to biology when laboratory work is substituted with computer simulations: development of an instrument to measure attitudes
Alex Stromme, Norwegian University of Science and Technology, Trondheim, Norway

Teaching and learning about sounds: study of explanatory systems and analysis of knowledge to be taught in order to develop a multi-representational modelling software
Jacques Vince, UMR GRIC-COAST, University Lumière Lyon 2, France
• Working group 5 : Labwork

Labwork working group : Staff report
John Leach, Centre for Studies in Science an Mathematics Education, University of Leeds, United Kingdom
Maria-Pilar Jiménez-Aleixandre, Department of Didactica de las Ciencias
Joe Redish, Department of Physics, University of Maryland, USA

Labwork working group : Students’ report

Analysis and description of learning processes during studying physics with special focus on the influence of interactions
Claudia Von Aufschnaiter, Institute of Physics Education, University of Bremen, Germany

Role of the work place experience during vocational courses in factories.
The case of the training during the second year of course preparing the “professional baccalaureate” in industrial maintenance
Henri Pierre Deliou, Equipe COAST UMR GRIC, Université Lyon 2, France

Longitudinal study on lab work and 10-12 year old’s development of the concepts of transformation of matter
Olle Eskilsson, Department of Mathematics and Science, Kristianstad University, Sweden

Investigating the effectiveness of a bayesian and metrological teaching sequence on introductory statistical treatment of experimental data for physics undergraduates
Dimitris Evangelinos, School of Education, Aristotle University of Thessaloniki, Greece

Objectivation of a chemical phenomenon : the example of electrolysis
Nathalie Evrard, Laboratory for Science Education, Catholic University of Louvain, Belgium, LIREST, Ecole Normale Supérieure de Cachan, France

The development of situated cognition during students’ labwork activities at university with a special focus on objectives
Kerstin Holler, Institute of physics Education, University of Bremen, Germany

Experimental work and learning in physics
Birger Lundgren, Royal Danish School of Educational Studies, Copenhagen, Denmark

Towards a theoretically and empirically grounded redesign of introductory university labwork in physics curriculum
Carlos Uribe, Dept Didáctica de la Matemàtica i les Ciencies Experimentals, Universidad Autonoma de Barcelona, Barcelona, Spain
Role of different situations in learning engineer’s vocational knowledge 282
Laurent Veillard, UMR GRIC COAST, Université Lumière Lyon 2, France

Workshops 287-356

• Report on workshop 1A 288
Concept mapping as a tool for research in science education
Helmut Fischler and Jochen Peuckert, Free University, Berlin, Germany

• Report on workshop 1B 298
Situated conceptions: theory and methodology. From the collection of data (on the brain) to the analysis of conceptions
Pierre Clément, Equipe de recherche en Didactique de la Biologie et de l’Environnement, Lirdhist, Université Claude Bernard, Lyon 1, France

• Report on workshop 2A 316
The study of argument in classrooms
Maria Pilar Jiménez Aleixandre, University of Santiago de Compostela, Spain

• Report on workshop 2B 324
Learning process studies in physics: Two methods for analysing transcripts of videotapes
Stefan Von Aufschnaiter and Hans Niedderer, Institute for Physics Education, University of Bremen, Germany

• Report on workshop 3A 336
Energy in biological systems: a comparative study across Europe
Sheila Turner, Science and Technology Group, Institute of Education, University of London, United Kingdom
Vassiliki Zogza, Department of Education, University of Patras, Greece

• Report on workshop 3B 344
Interest and motivation in physics instruction: Theoretical constructs and empirical evaluation
Hannelore Schwedes and Annette Schick, Institute for Physics Education, University of Bremen, Germany

Panel discussion 357
PhD research in physics education
Lidia Borghi, Università di Pavia, Pavia, Italy

Evaluation 365

List of presents 370
