Particulate Matter in and from Agriculture

edited by
Torsten Hinz, Birgit Rönnpagel and Stefan Linke

Proceedings of the Conference organized by the Institut für Technologie und Biosystemtechnik, Bundesforschungsanstalt für Landwirtschaft (FAL)

held at Braunschweig, 3rd and 4th June, 2002
# Contents

## General Aspects

- **PM in and from agriculture– introduction and overview**
  *T. Hinz*
  
  Page 1

- **Assessment of immission of dust and micro-organisms as part of permitting procedures for livestock management installations – legal basis and methods**
  *E. Grimm*
  
  Page 7

## Models (Transport)

- **Creating an inventory of agricultural PM emissions**
  *V. R. Phillips*
  
  Page 21

- **European control strategy for fine particles: potential role of agriculture**
  *Z. Klimont*
  
  Page 29

- **Lagrangian dispersion modelling**
  *L. Janicke*
  
  Page 37

- **Dispersion of germs from animal houses and their relevance to immission**
  *K.-H. Krause*
  
  Page 43

- **Modelling PM 2.5 concentrations over Europe: the role of agriculture**
  *M. Schaap*
  
  Page 49

- **Chemical coupling between Ammonia, acid gases, and fine particles**
  *V. P. Aneja*
  
  Page 57

## Measuring Techniques

- **Particles size selective PM measurements**
  *H. Fissan*
  
  Page 65

- **New portable environmental fine dust analyzer for simultaneous monitoring of PM-10, PM 2.5 and PM-1**
  *H. Grimm*
  
  Page 69

- **Real time portable aerosol particle sizer (counter) from 0.005 to 20 μm**
  *U. Golz*
  
  Page 73

- **Evaluation of a new method for personal time and size resolved dust measurements at workplaces**
  *W. Koch*
  
  Page 77

- **Determination of backscatter and fluorescence cross-sections of biological aerosols**
  *R. Weichert*
  
  Page 83

- **Lidar contribution to particulate matter (PM) measurements from agricultural operations**
  *K. Trzepla-Nabaglo*
  
  Page 89

- **Measurement of particle emissions from diesel engines operating on different fuels**
  *H. Stein*
  
  Page 95

- **Optical flow algorithm to quantify the two-dimensional velocity components of a visualised air jet**
  *D. Berckmans*
  
  Page 103

- **Measurement of PM 10 and PM 2.5 emission potential from soil using the UC Davis resuspension test chamber**
  *O. F. Carvacho*
  
  Page 109

- **Size segregated particle mass concentration and chemical composition in an agrarian region in Saxony**
  *G. Spindler*
  
  Page 113
Effects

Effects of bioaerosol related particulate matter on animal health
J. Hartung ................................................................. 119

Characterization of organic dust exposure by using a human whole blood essay
B. Zucker ................................................................. 125

Production and disease effects of dust and ammonia on the weaner pig
T. Demmers ............................................................... 129

Measurement Results

Livestock related fine dust – composition, structure and flows
T. Takai ........................................................................ 139

Comparison of the indoor dust concentration between two different housing and ventilation systems for fattening pigs
E. Gallmann ............................................................... 145

Mass balances and dust reduction methods in pig houses
G. Gustafsson ............................................................ 155

Properties of airborne dust from pig husbandries and their effects on measurement
F. Schneider ............................................................... 163

Concentrations of airborne dust in different farrowing systems
H. Snell ................................................................. 169

Particulate matter concentrations in two different buildings for laying hens. A first note
M. Guarino ............................................................... 175

Fine particles and their constituents in Germany – results of denuder filter measurements
U. Dämmgen ............................................................. 181

The papers are not revised by the organizer. Figures and contents are in full responsibility of the authors.
