Peirce’s Scientific Metaphysics

The Philosophy of Chance, Law, and Evolution

Andrew Reynolds

Vanderbilt University Press
Nashville
### Contents

**Texts and Abbreviations** ix  
**Acknowledgments** xi  
**Introduction** 1

1 **Scientific and Philosophical Background** 5  
   *Naturphilosophie*, Evolution,  
   and the Law of Large Numbers 5  
   Agnosticism, Necessitarianism,  
   and the Mechanical Philosophy 7  
   Synechism, Tychism, and Agapism 10  
   Motivations for a Cosmology 13  
   What Is a Hypothesis? 14  
   Synechism 17  
   Objective Idealism 18  
   A Summary Statement of the Cosmology 23  
   Summary 25

2 **Irreversibility in Physics** 26  
   Nineteenth-Century Physics 27  
   The Laws of Motion 28  
   The Law of Vis Viva 30  
   The Conservation of Energy Principle 32  
   The Doctrine of the Conservation of Energy 37  
   Conditions for Reversibility 39  
   The Second Law of Thermodynamics,  
   the Kinetic Theory of Gases, and the  
   Law of Large Numbers 41  
   Summary 47
3 Irreversibility in Psychics 49
The Law of Mind 49
Causation and Mental Activity 54
Teleology and the Action of Mind 57
The Problem of Mind-Matter Reductionism 59
What Is Time? 64
Summary 75

4 Irreversibility in Physiology and Evolution 76
Physiology 77
The Molecular Theory of Protoplasm 77
Protoplasm, Habit, and Nutrition 81
Evolution 97
The Influence of Darwin 97
Peirce's Classification of Evolutionary Philosophies 106
Summary 108

5 Cosmology and Synechism 110
Order Out of Chaos 113
Variation and the Law of Large Numbers 118
Agapasm and the Law of Large Numbers 121
Rival Cosmologies 124
Elliptic Philosophy 125
Parabolic Philosophy 126
Hyperbolic Philosophy 130
Peirce's Acquaintance with Modern Physics 137

6 Chance and Law 142
What Is Chance? 143
The Laws of Chance 157
The Law of Habit 159
The Redundancy Problem 161
The Incompatibility Problem 162
Peirce and Prigogine 173

7 Conclusion 176
Notes 185
Bibliography 213
Index 223
