Contents

Preface .................................................................................................................................................. v

1. Perry L. Ehlig: Career and Contributions, 1927–1999 ................................................................. 1
   John C. Crowell

2. Neoproterozoic and Cambrian strata of Sonora, Mexico: Rodinian supercontinent to
   Laurentian Cordilleran margin ........................................................................................................ 5
   John H. Stewart, Ricardo Amaya-Martinez, and A.R. Palmer

3. Controls on orogenesis along an ocean-continent margin transition in the Jura-Cretaceous
   Peninsular Ranges batholith ........................................................................................................... 49
   K.L. Schmidt, P.H. Wetmore, S.E. Johnson, and S.R. Paterson

4. Structural and tectonic evolution of Mesozoic basement-involved fold nappes and thrust
   faults in the Dome Rock Mountains, Arizona .................................................................................. 73
   Stefan S. Boettcher, Sharon Mosher, and Richard M. Tosdal

5. The Orocopia Schist in southwest Arizona: Early Tertiary oceanic rocks trapped
   or transported far inland ................................................................................................................ 99
   Gordon B. Haxel, Carl E. Jacobson, Stephen M. Richard, Richard M. Tosdal,
   and Michael J. Grubensky

6. Exhumation history of the Orocopia Schist and related rocks in the Gavilan Hills area
   of southeasternmost California .................................................................................................... 129
   Carl E. Jacobson, Marty Grove, Matthew M. Stamp, Ana Vucic, Felix R. Oyarzabal,
   Gordon B. Haxel, Richard M. Tosdal, and David R. Sherrod

7. Pelona Schist, Perry Ehlig, and the archipelago model of orogenesis ........................................ 155
   Kenneth Hsu

8. Middle Miocene reconstruction of the central and eastern San Gabriel Mountains, southern
   California, with implications for evolution of the San Gabriel fault and Los Angeles basin...161
   Jonathan A. Nourse

   Peter W. Weigand, Karen L. Savage, and Craig Nicholson

10. Controls on the erosion and geomorphic evolution of the San Bernardino
    and San Gabriel Mountains, southern California ..................................................................205
    James A. Spotila, Martha A. House, Ann E. Blythe, Nathan A. Niemi, and Gregory C. Bank

11. Low-temperature thermochronology of the San Gabriel and San Bernardino Mountains,
    southern California: Constraining structural evolution ...........................................................231
    Ann E. Blythe, Martha A. House, and James A. Spotila

12. Stratigraphic record of Pleistocene initiation and slip on the Coyote Creek fault, Lower
    Coyote Creek, southern California ..........................................................................................251
    Rebecca J. Dorsey

iii
13. The relation of the southern San Jacinto fault zone to the Imperial and Cerro Prieto faults
Harold Magistrale

271

14. Convergence, block rotation, and structural interference across the Peninsular-Transverse Ranges boundary, eastern Santa Monica Mountains, California
Andrew J. Meigs and Michael E. Oskin

279

15. Penetrative strain at shallow crustal levels: The role of pressure solution in accommodating regional shortening strain, Ventura basin, western Transverse Ranges, California
Ernest M. Duebendorfer and Karin L. Meyer

295
