List of Figures	xii
Notation	xiii
Preface	xxi
1 Introduction to the Central Concepts	1
1.1 Aim and History of Discrete Convex Analysis	1
1.1.1 Aim	1
1.1.2 History	5
1.2 Useful Properties of Convex Functions	9
1.3 Submodular Functions and Base Polyhedra	15
1.3.1 Submodular Functions	16
1.3.2 Base Polyhedra	18
1.4 Discrete Convex Functions	21
1.4.1 L-Convex Functions	21
1.4.2 M-Convex Functions	25
1.4.3 Conjugacy	29
1.4.4 Duality	32
1.4.5 Classes of Discrete Convex Functions	36
Bibliographical Notes	36
2 Convex Functions with Combinatorial Structures	39
2.1 Quadratic Functions	39
2.1.1 Convex Quadratic Functions	39
2.1.2 Symmetric M-Matrices	41
2.1.3 Combinatorial Property of Conjugate Functions	47
2.1.4 General Quadratic L-/M-Convex Functions	51
2.2 Nonlinear Networks	52
2.2.1 Real-Valued Flows	52
2.2.2 Integer-Valued Flows	56
2.2.3 Technical Supplements	58
2.3 Substitutes and Complements in Network Flows	61
2.3.1 Convexity and Submodularity	61

	2.3.2	Technical Supplements	63
2.4		Matroids	68
	2.4.1	From Matrices to Matroids	68
	2.4.2	From Polynomial Matrices to Valuated Matroids	71
		Bibliographical Notes	74
3		Convex Analysis, Linear Programming, and Integrality	77
	3.1	Convex Analysis	77
	3.2	Linear Programming	86
	3.3	Integrality for a Pair of Integral Polyhedra	90
	3.4	Integrally Convex Functions	92
		Bibliographical Notes	99
4		M-Convex Sets and Submodular Set Functions	101
	4.1	Definition	101
	4.2	Exchange Axioms	102
	4.3	Submodular Functions and Base Polyhedra	103
	4.4	Polyhedral Description of M-Convex Sets	108
	4.5	Submodular Functions as Discrete Convex Functions	111
	4.6	M-Convex Sets as Discrete Convex Sets	114
	4.7	M^{\natural} -Convex Sets	116
	4.8	M-Convex Polyhedra	118
		Bibliographical Notes	119
5		L-Convex Sets and Distance Functions	121
	5.1	Definition	121
	5.2	Distance Functions and Associated Polyhedra	122
	5.3	Polyhedral Description of L-Convex Sets	123
	5.4	L-Convex Sets as Discrete Convex Sets	125
	5.5	L^{\natural} -Convex Sets	128
	5.6	L-Convex Polyhedra	131
		Bibliographical Notes	131
6		M-Convex Functions	133
	6.1	M-Convex Functions and M^{\natural} -Convex Functions	133
	6.2	Local Exchange Axiom	135
	6.3	Examples	138
	6.4	Basic Operations	142
	6.5	Supermodularity	145
	6.6	Descent Directions	146
	6.7	Minimizers	148
	6.8	Gross Substitutes Property	152
	6.9	Proximity Theorem	156
	6.10	Convex Extension	158
	6.11	Polyhedral M-Convex Functions	160
	6.12	Positively Homogeneous M-Convex Functions	164

6.13	Directional Derivatives and Subgradients	166
6.14	Quasi M-Convex Functions	168
	Bibliographical Notes	175
7	L-Convex Functions	177
7.1	L-Convex Functions and L^h -Convex Functions	177
7.2	Discrete Midpoint Convexity	180
7.3	Examples	181
7.4	Basic Operations	183
7.5	Minimizers	185
7.6	Proximity Theorem	186
7.7	Convex Extension	187
7.8	Polyhedral L-Convex Functions	189
7.9	Positively Homogeneous L-Convex Functions	193
7.10	Directional Derivatives and Subgradients	196
7.11	Quasi L-Convex Functions	198
	Bibliographical Notes	202
8	Conjugacy and Duality	205
8.1	Conjugacy	205
8.1.1	Submodularity under Conjugacy	206
8.1.2	Polyhedral M-/L-Convex Functions	208
8.1.3	Integral M-/L-Convex Functions	212
8.2	Duality	216
8.2.1	Separation Theorems	216
8.2.2	Fenchel-Type Duality Theorem	221
8.2.3	Implications	224
8.3	M_2 -Convex Functions and L_2 -Convex Functions	226
8.3.1	M_2 -Convex Functions	226
8.3.2	L_2 -Convex Functions	229
8.3.3	Relationship	234
8.4	Lagrange Duality for Optimization	234
8.4.1	Outline	234
8.4.2	General Duality Framework	235
8.4.3	Lagrangian Function Based on M-Convexity	238
8.4.4	Symmetry in Duality	241
	Bibliographical Notes	244
9	Network Flows	245
9.1	Minimum Cost Flow and Fenchel Duality	245
9.1.1	Minimum Cost Flow Problem	245
9.1.2	Feasibility	247
9.1.3	Optimality Criteria	248
9.1.4	Relationship to Fenchel Duality	253
9.2	M-Convex Submodular Flow Problem	255
9.3	Feasibility of Submodular Flow Problem	258

9.4	Optimality Criterion by Potentials	260
9.5	Optimality Criterion by Negative Cycles	263
9.5.1	Negative-Cycle Criterion	263
9.5.2	Cycle Cancellation	265
9.6	Network Duality	268
9.6.1	Transformation by Networks	269
9.6.2	Technical Supplements	273
	Bibliographical Notes	278
10	Algorithms	281
10.1	Minimization of M-Convex Functions	281
10.1.1	Steepest Descent Algorithm	281
10.1.2	Steepest Descent Scaling Algorithm	283
10.1.3	Domain Reduction Algorithm	284
10.1.4	Domain Reduction Scaling Algorithm	286
10.2	Minimization of Submodular Set Functions	288
10.2.1	Basic Framework	288
10.2.2	Schrijver's Algorithm	293
10.2.3	Iwata–Fleischer–Fujishige's Algorithm	296
10.3	Minimization of L-Convex Functions	305
10.3.1	Steepest Descent Algorithm	305
10.3.2	Steepest Descent Scaling Algorithm	308
10.3.3	Reduction to Submodular Function Minimization	308
10.4	Algorithms for M-Convex Submodular Flows	308
10.4.1	Two-Stage Algorithm	309
10.4.2	Successive Shortest Path Algorithm	311
10.4.3	Cycle-Canceling Algorithm	312
10.4.4	Primal-Dual Algorithm	313
10.4.5	Conjugate Scaling Algorithm	318
	Bibliographical Notes	321
11	Application to Mathematical Economics	323
11.1	Economic Model with Indivisible Commodities	323
11.2	Difficulty with Indivisibility	327
11.3	M^h -Concave Utility Functions	330
11.4	Existence of Equilibria	334
11.4.1	General Case	334
11.4.2	M^h -Convex Case	337
11.5	Computation of Equilibria	340
	Bibliographical Notes	344
12	Application to Systems Analysis by Mixed Matrices	347
12.1	Two Kinds of Numbers	347
12.2	Mixed Matrices and Mixed Polynomial Matrices	353
12.3	Rank of Mixed Matrices	356
12.4	Degree of Determinant of Mixed Polynomial Matrices	359

Bibliographical Notes	361
Bibliography	363
Index	379
