INTRODUCTION TO
VOLCANIC SEISMOLOGY

V.M. Zobin
Observatorio Vulcanologico, Colima, Mexico
## Contents

### Chapter 1
**Introduction**

1.1. Terms and definitions 1  
   1.1.1. Volcanic terms 1  
   1.1.2. Tectonic terms 5  
   1.1.3. Seismological terms 6  
1.2. Subject of the book 7  
1.3. Acknowledgements 7

### Chapter 2
**Seismicity at Volcanoes**

2.1. History of seismic monitoring of volcanic activity 9  
2.2. Classification of volcanic earthquakes 16  
2.3. Sequences of volcanic earthquakes 19  
   2.3.1. Sequences of volcano-tectonic earthquakes 21  
   2.3.2. Sequences of eruption earthquakes 28

### Chapter 3
**Origin of Volcano-tectonic Earthquakes**

3.1. Magma and its physical and chemical properties 32  
3.2. Volcanism and tectonics 35  
3.3. Models of volcano-tectonic earthquake sequences 42

### Chapter 4
**Origin of Eruption Earthquakes**

4.1. Processes of the outlet of eruption products from volcanic crater 47  
   4.1.1. Fragmentation of magma 47  
   4.1.2. Volcanic “fall-and-flow” processes 48  
4.2. Seismic modeling of eruption earthquakes 50  
   4.2.1. Model of seismic signals produced by an eruption 51  
   4.2.2. Models based on the vibration of magma body 54  
   4.2.3. Models based on degassing process of magma 59  
   4.2.4. Modeling of seismic signals generated by pyroclastic flows and rockfalls 64
## Chapter 5
**Volcano-tectonic Earthquakes at Basaltic Volcanoes**

5.1. Volcano-tectonic earthquakes associated with shield volcanoes
- 5.1.1. Kilauea volcano, Hawai‘i
- 5.1.2. Mt. Etna, Sicily

5.2. Volcano-tectonic earthquakes associated with stratovolcanoes
- 5.2.1. Oshima volcano, Izu islands, Japan
- 5.2.2. Klyuchevskoy volcano, Kamchatka, Russia

5.3. Volcano-tectonic earthquakes associated with fissure eruptions
- 5.3.1. New Tolbachik Volcanoes, Kamchatka, Russia

5.4. Volcano-tectonic earthquakes associated with caldera collapse
- 5.4.1. Fernandina volcano, Galápagos Isl.

5.5. Volcano-tectonic earthquakes associated with submarine eruptions
- 5.5.1. Teishi-Knoll volcano, 1989. Izu Islands, Japan

## Chapter 6
**Volcano-tectonic Earthquakes at Andesitic Volcanoes**

6.1. Volcano-tectonic earthquakes associated with volcanic "directed blasts"
- 6.1.1. Bezymianny volcano, Kamchatka, Russia
- 6.1.2. Sheveluch volcano, Kamchatka, Russia

6.2. Volcano-tectonic earthquakes associated with phreatic and phreato-magmatic explosions
- 6.2.1. El Chichón volcano, México
- 6.2.2. Volcán de Colima, México
- 6.2.3. Soufrière Hills volcano, Montserrat

6.3. Volcano-tectonic earthquakes associated with lava extrusions
- 6.3.1. Volcán de Colima, México

6.4. Volcano-tectonic earthquakes associated with flank eruption
- 6.4.1. Sakurajima volcano, Japan

## Chapter 7
**Volcano-tectonic Earthquakes at Dacitic Volcanoes**

7.1. Volcano-tectonic earthquakes associated with central eruptions
- 7.1.1. Mt. St. Helens, Cascades, U.S.A
- 7.1.2. Usu volcano, Hokkaido, Japan
## Contents

7.1.3. Unzen volcano, Kyushu, Japan 121  
7.1.4. Pinatubo volcano, Philippines 125  
7.2. Volcano-tectonic earthquakes associated with flank eruptions 129

### Chapter 8  
**General Properties of Volcano-tectonic Earthquake Swarms**  
8.1. Properties of volcano-tectonic earthquake swarms inferred from the data of Chapters 5 to 7  
8.1.1. Temporal variations 133  
8.1.2. Spatial distributions 136  
8.1.3. Post-eruption seismic activity 137  
8.1.4. Duration of seismic activity before volcanic event 138  
8.1.5. Position of a volcanic event according to the stage of volcano-tectonic earthquake swarm 138  
8.2. Additional data about volcano-tectonic earthquake swarm properties  
8.2.1. Size of volcano-tectonic earthquake swarm area 139  
8.2.2. Earthquake swarm duration 140  
8.2.3. Magnitude-frequency relations of events in volcano-tectonic earthquake swarms 141

### Chapter 9  
**Source Properties of Volcano-tectonic Earthquakes**  
9.1. Focal mechanisms of volcano-tectonic earthquakes: double couple and non-double couple models  
9.1.1. Double couple model 146  
9.1.2. Non-double couple model 152  
9.2. Spectral characteristics of volcano-tectonic earthquakes 156  
9.2.1. Spectra of total records of volcano-tectonic earthquakes 157  
9.2.2. Spectral source characteristics of volcano-tectonic earthquakes and their relationship with the type of volcanic activity 158  
9.2.3. Temporal variations of spectral source characteristics of volcano-tectonic earthquakes in the course of volcanic activity 161  
9.3. Seismo-tectonic deformations in volcanic region 165

### Chapter 10  
**Significant Volcano-tectonic Earthquakes and their Role in Volcanic Processes**  
10.1. Selection of significant volcano-tectonic earthquakes that
occurred in the XXth century
10.2. Focal rupturing of significant volcano-tectonic earthquakes and its role in volcanic processes

10.2.1. Rupturing of the magnitude Mw 5.2 earthquake preceding the 1989 Teishi Knoll submarine eruption
10.2.2. Rupturing of the magnitude Mw 7.1 earthquake preceding the 1996 Akademia Nauk volcano subaqual eruption
10.2.3. Rupturing of the magnitude Mw 5.6 earthquake preceding the 1996 Grimsvøtn volcano subglacial eruption

10.3. The magnitude 7 volcano-tectonic earthquakes in volcanic processes

10.3.1. Event No 2, Katmai, Alaska
10.3.2. Event No 3, Sakurajima, Japan

10.4. Seismic hazard of significant volcano-tectonic earthquakes

10.4.1. Maximum magnitude Mmax
10.4.2. Attenuation of intensity with distance for volcanic earthquakes

10.4.3. Recurrence time
10.4.4. Estimation of seismic hazard of volcanic activity of Colima volcano, Mexico

Chapter 11
Volcanic Tremor

11.1. Seismograms and spectra
11.2. Location of volcanic tremor
11.2.1. Oshima volcano, Izu islands
11.2.2. Kilauea volcano, Hawai
11.3. Volcanic tremors in eruptive process
11.3.1. Etna volcano, Italy
11.3.2. Pavlof volcano, Alaska
11.3.3. Kilauea volcano, Hawai
11.4. Relationships between the intensity of seismic signals and volcanic events
11.5. Special cases of volcanic tremors
11.5.1. Isolated tremors
11.5.2. Deep tremor
11.5.3. Long-period tremor

Chapter 12
Earthquakes Related to Pyroclastic Flows and Rockfalls

12.1. Occurrences of “fall-and-flow” earthquakes
12.2. Relationship between the “fall-and-flow” earthquakes and seismo-volcanic activity during lava emission
12.3. Quantification of “fall-and-flow” earthquakes
12.3.1. Quantification of "fall-and-flow" earthquakes recorded by short-period instruments at Volcán de Colima, México  
12.3.2. Relationship between the amplitude of the long-period records of "fall-and-flow" earthquakes and the volume of pyroclastic flows  
12.4. Location pyroclastic flows using amplitude signals of "fall-and-flow" earthquakes

**Chapter 13**  
**Explosion Earthquakes**

13.1. Waveforms of explosion earthquakes  
13.2. Occurrences of explosion earthquakes and their location  
13.3. Explosion earthquakes in the eruptive process  
13.4. Size of explosion earthquakes

**Chapter 14**  
**Seismic Monitoring of Volcanic Activity and Prediction of Volcanic Eruptions**

14.1. Methodology of seismic monitoring of volcanic activity  
14.2. Applications of volcanic seismicity in the prediction of volcanic eruptions  
14.2.1. Methods based on the statistical variations in the parameters of volcano-tectonic earthquakes  
14.2.2. Methods based on a study of the variations in complex behavior of different types of volcanic earthquakes  
14.2.3. Seismic precursors to small explosions

**Chapter 15**  
**Some Remarks About Unresolved Problems**

15.1. Variety of low-frequency volcanic earthquakes  
15.1.1. Low-frequency volcano-tectonic earthquakes  
15.1.2. Low-frequency eruption earthquakes  
15.2. Seismic activity at dormant volcanic structures: A problem of possible eruption  
15.2.1. Matsushiro swarms  
15.2.2. Long Valley swarms  
15.2.3. Campi Flegrei swarms
