Contents

Preface v
Interdependence Chart xi

Chapter I. General Fundamentals 1
  1.1 Rudiments ...................................................... 1
  1.2 Some elementary ring theory .................................. 8
  1.3 Skew polynomial rings ......................................... 14

Chapter II. The General Theory of Radicals 21
  2.1 Radical classes ................................................. 21
  2.2 Radical constructions .......................................... 28
  2.3 Semisimple classes ............................................. 31

Chapter III. Radical Theory for Associative Rings 39
  3.1 Semisimple classes of associative rings ..................... 39
  3.2 Hereditary radicals and their semisimple classes .......... 45
  3.3 Lower radical constructions .................................. 51
  3.4 The termination of the Kurosh radical construction ....... 54
  3.5 The Suliński–Anderson–Divinsky problem ................... 60
  3.6 Supernilpotent radicals and their semisimple classes .... 65
  3.7 Supernilpotent radicals and weakly special classes ..... 73
  3.8 Special radicals ................................................. 79
  3.9 Supplementing and dual radicals ................................ 89
  3.10 Subidempotent radicals ......................................... 98
  3.11 Hypernilpotent and hypoidempotent radicals ............... 101
  3.12 Partition of simple rings, unequivocal rings .......... 102
  3.13 Minimally embeddable rings ................................... 108
  3.14 Modules and radicals ........................................... 118
  3.15 Radicals defined by means of elements ..................... 131
  3.16 One-sided hereditary radicals and stable radicals ....... 135
