Contents

Dedication ......................................................................................................................... v

Acknowledgments ............................................................................................................ ix

Preface ............................................................................................................................... xi

1. Ophiolite concept and its evolution
   Yildirim Dilek .................................................................................................................. 1

2. A personal history of the ophiolite concept ................................................................. 17
   Eldridge M. Moores

3. Identification of a mantle unit in ophiolites: A major step in the evolution of
   the ophiolite concept ....................................................................................................... 31
   Thierry Juteau

4. N.L. Bowen, H.H. Hess, and ultramafic rocks: Perspectives on ophiolites
   before plate tectonics ....................................................................................................... 55
   Davis A. Young

5. Ophiolites, ocean crust formation, and magnetic studies: A personal view ................. 65
   F.J. Vine

6. Die ophiolithischen Zonen in den mediterranen Kettengebirgen (The ophiolitic zones in the
   Mediterranean mountain chains) ................................................................................. 77
   Gustav Steinmann (Daniel Bernoulli and Gerald M. Friedman, Translators)

7. Where did Gustav Steinmann see the trinity? Back to the roots of
   an Alpine ophiolite concept ............................................................................................ 93
   Daniel Bernoulli, Gianreto Manatschal, Laurent Desmurs, and Othmar Müntener

8. Ophiolites, historical contingency, and the Wilson cycle ............................................ 111
   Martin F.J. Flower

9. Where ophiolites come from and what they tell us .................................................... 137
   Adolphe Nicolas and Françoise Boudier

10. Ophiolites and lost oceans: Rifts, ridges, arcs, and/or scrapings? ............................ 153
    John Dewey

11. Role of ophiolites in archipelago model of orogenesis .............................................. 159
    Kenneth J. Hsü
12. Ophiolites and the interpretation of marine geophysical data: How well does the ophiolite model work for the Pacific Ocean crust? ......................................................... 173
James S. McClain

13. Development of ophiolitic perspectives on models of oceanic magma chambers beneath active spreading centers ................................................................. 187
Peter Thy and Yildirim Dilek

14. Geology of supra-subduction zones—Implications for the origin of ophiolites .......................... 227
James W. Hawkins

15. Supra-subduction zone ophiolites: The search for modern analogues .................................. 269
Julian A. Pearce

16. The Troodos Massif of Cyprus: Its role in the evolution of the ophiolite concept ...................... 295
Paul T. Robinson, John Malpas, and Costas Xenophontos

17. The Troodos ophiolite and the upper ocean crust; a reciprocal traffic in scientific concepts ........ 309
J.R. Cann

18. The sheeted dike complex of the Troodos ophiolite and its role in understanding mid-ocean ridge processes .......................................................... 323
Robert J. Varga

19. The evolution of ideas for the origin and emplacement of the western Hellenic ophiolites .... 337
A.G. Smith and A. Rassios

20. Development of the ideas on the origin of Albanian ophiolites ............................................. 351
Minella Shallo and Yildirim Dilek

21. High-pressure and ultrahigh-pressure metamorphic belts—Subduction, recrystallization, exhumation, and significance for ophiolite study ........................................... 365
W.G. Ernst

22. The repeated rediscovery of mélanges and its implications for the possibility and the role of objective evidence in the scientific enterprise ........................................... 385
A.M.C. Şengör

23. History of asbestos discovery and use and asbestos-related disease in context with the occurrence of asbestos within ophiolite complexes ........................................... 447
Malcolm Ross and Robert P. Nolan
