## Contents

Preface of the 1\textsuperscript{st} Edition \hspace{1cm} vii

Preface of the 2\textsuperscript{nd} Edition \hspace{1cm} ix

List of Special Symbols \hspace{1cm} xi

Chapter 1. The Lattice Structure of Riesz spaces \hspace{1cm} 1
  1.1. Elementary Properties of Riesz spaces \hspace{1cm} 1
  1.2. Ideals, Bands, and Riesz Subspaces \hspace{1cm} 10
  1.3. Order Completeness and Projection Properties \hspace{1cm} 18
  1.4. The Freudenthal Spectral Theorem \hspace{1cm} 25
  1.5. The Main Inclusion Theorem \hspace{1cm} 31
  1.6. Order Bounded Operators \hspace{1cm} 33
  1.7. The Order Dual of a Riesz space \hspace{1cm} 41

Chapter 2. Locally Solid Topologies \hspace{1cm} 49
  2.1. Linear Topologies on Vector Spaces \hspace{1cm} 49
  2.2. The Basic Properties of Locally Solid Topologies \hspace{1cm} 55
  2.3. Locally Convex-solid Topologies \hspace{1cm} 59
  2.4. Topological Completion of a Locally Solid Riesz Space \hspace{1cm} 66

Chapter 3. Lebesgue Topologies \hspace{1cm} 75
  3.1. Examples and Properties of Lebesgue Topologies \hspace{1cm} 75
  3.2. Locally Convex-solid Lebesgue Topologies \hspace{1cm} 80
  3.3. Lebesgue Properties and $L_p$-Spaces \hspace{1cm} 85

Chapter 4. Fatou Topologies \hspace{1cm} 99
  4.1. Basic Properties of the Fatou Topologies \hspace{1cm} 99
  4.2. The Structure of the Fatou Topologies \hspace{1cm} 102
  4.3. Topological Completeness and Fatou Topologies \hspace{1cm} 108
  4.4. Quotient Riesz Spaces and Fatou Properties \hspace{1cm} 114

Chapter 5. Metrizability \hspace{1cm} 119
  5.1. Upper and Lower Elements \hspace{1cm} 119
  5.2. Fréchet Topologies \hspace{1cm} 125
  5.3. The Pseudo Lebesgue Properties \hspace{1cm} 129
  5.4. The $B$-Property \hspace{1cm} 135
  5.5. Comparing Locally Solid Topologies \hspace{1cm} 136

Chapter 6. Weak Compactness in Riesz Spaces \hspace{1cm} 143
  6.1. Topologies on the Duals of a Riesz Space \hspace{1cm} 143
  6.2. Weak Compactness in the Order Duals \hspace{1cm} 148
6.3. Weak Sequential Convergence 158
6.4. Compact Solid Sets 162
6.5. Semireflexive Riesz Spaces 173

Chapter 7. Lateral Completeness 179
7.1. Laterally Complete Riesz Spaces 179
7.2. The Universal Completion 187
7.3. Lateral and Universal Completeness 196
7.4. Lateral Completeness and Local Solidness 201
7.5. Minimal Locally Solid Topologies 207

Chapter 8. Market Economies 215
8.1. Preferences and Utility Functions 215
8.2. Exchange Economies and Efficiency 217
8.3. Efficiency, Prices, and the Welfare Theorems 221
8.4. Properness 224
8.5. Properness and Efficiency 228
8.6. Equilibrium 231
8.7. Continuity Properties of Supporting Prices 233
8.8. The Utility Space of an Economy and Efficiency 236
8.9. Existence of Equilibria 240
8.10. The Core of an Economy 243
8.11. Replication 245
8.12. Edgeworth Equilibria 247
8.13. Core Equivalence 251
8.14. The Single Sector Growth Model 257

Chapter 9. Solutions to the Exercises 267
9.1. Chapter 1: The Lattice Structure of Riesz Spaces 267
9.2. Chapter 2: Locally Solid Topologies 279
9.3. Chapter 3: Lebesgue Topologies 284
9.4. Chapter 4: Fatou Topologies 289
9.5. Chapter 5: Metrizability 295
9.6. Chapter 6: Weak Compactness in Riesz Spaces 301
9.7. Chapter 7: Lateral Completeness 307
9.8. Chapter 8: Market Economies 317

Bibliography 331
