CONTENTS

Introduction
N.R. Morgenstern and D.C. Esch ........................................... 1

Chapter 1: Ground Temperature Observations
T.A. Hammer, W.L. Ryan, and W.L. Zirjacks ......................... 9

Chapter 2: Climate Change Impacts on Cold Regions Engineering
G. Weller ........................................................................ 47

Chapter 3: Temperature Monitoring or Ground Thermometry
D.L. Miller .......................................................................... 57

Chapter 4: Passive Techniques for Ground Temperature Control
J.P. Zarling, E.L. Long and C.E. Heuer ............................... 77

Chapter 5: Passive Cooling in Open Rock Embankments
D.J. Goering ..................................................................... 167

Chapter 6: Active Freezing Techniques
D. Mageau and J.F. Nixon .................................................. 193

Chapter 7: Thawing Techniques for Frozen Ground
D.C. Esch .......................................................................... 239

Chapter 8: Ground Thermal Properties
O.T. Farouki ................................................................. 259

Chapter 9: Thermal Properties of Soils and Surface Covers
R.I. Gavriliev .................................................................... 277

Chapter 10: Analytical Methods for Thermal Regime Calculations
V.J. Lunardini ................................................................. 295

Chapter 11: Permafrost Thaw Beneath Buried Pipelines
Y. Shur, B. Nidowicz, R. Kamensky, and V. Slavin-Borovsky... 363

Chapter 12: Case Histories of Ground Temperature Effects
J.F. Nixon ......................................................................... 427

Chapter 13: Stabilizing Distressed Foundations on Permafrost
T. McFadden ................................................................. 445

Index .................................................................................. 481
