The Question of Conversion of Coniferous Forests

Abstracts of the International Conference
27 September – 02 October 2003
Freiburg im Breisgau, Germany
TABLE OF CONTENTS

Preface ........................................................................................................................................................................... 7

Conference organisation and programme ...................................................................................................................... 9

Review and results by the specialised RPC-CONFOREST groups .............................................................................. 15

1 Terms and definitions relevant for conversion ........................................................................................................... 16
   by Hubert Hasenauer

2 Present distribution of secondary Norway spruce in Europe .................................................................................... 17
   by Konstantin von Teuffel et al.

3 History of secondary spruce forests in Europe ......................................................................................................... 18
   by Elisabeth Johann et al.

4 Economic evaluation of conversion projects ............................................................................................................ 20
   by Bernhard Mohring

5 Conversion of coniferous forests in a social perspective ........................................................................................... 22
   by Ulrich Schraml & Karl-Reinhard Volz

6 Ecological consequences of conversion .................................................................................................................... 23
   by Jiri Kulhavy et al.

7 Silvicultural strategies for conversion ....................................................................................................................... 25
   by Burghard von Lüpke et al.

8 Operational factors influencing the efficiency in conversion .................................................................................... 27
   by Tomas Nordfjell

9 Conclusions – lessons learnt .......................................................................................................................................... 28
   by Hubert Sterba

Parallel Sessions: Session A - Conversion strategies and impact ................................................................................. 29

10 Keynote: Silvicultural strategies for developing old growth structures in conifer plantations with particular reference to oceanic climates ...................................................................................... 30
    by Bill Mason & Jonathan W. Humphrey

11 It's not just semantics: Why clear communication matters ....................................................................................... 31
    by John Stanturf & Palle Madsen

12 Sap flow dynamics in terms of competition between overstorey spruce and understorey beech in southern Moravia ..................................................................................................................... 32
    by Nadezda Nadezdina et al.

13 Impact of species composition on forest soil properties and nutrient fluxes of secondary pure spruce and mixed spruce-beech stands .................................................................................. 33
    by Torsten W. Berger

14 Impact of selective cutting and clear cutting on seepage water quality .................................................................. 35
    by Wendelin Weis
15 Root growth and mycorrhizal diversity in monocultural and mixed Scots pine and beech ecosystems of the German North-Eastern Lowlands ................................................................. 36
by Bernd Uwe Schneider et al.

Parallel Sessions: Session B - Conversion aspects - biodiversity, economics, politics ........ 37
16 Keynote: The serious task of conversion – changing conifer plantations to natural stands ................................................................. 38
by Ralph D. Nyland
17 The development of arthropods during and after conversion of pure spruce stands into mixed forests ................................................................. 39
by Kerstin Engel & Ulrich Ammer
18 The effects of forest conversion on ground vegetation in the Southern Black Forest ........ 40
by Stefanie Gärtner
19 Restoration of deciduous forest in Söderåsen National Park, Sweden, as a LIFE-Nature project ................................................................. 41
by Oddvar Fiskešjö
20 Influence of conversion of pine forests on soil mites fauna (Acari, Mesostigmata) ........ 42
by Maciej Skorupski
21 Aspects of conversion out of the view of private forest enterprises – a modelling, economic and political approach ................................................................. 43
by Christine Fürst & Hans Herling

Parallel Sessions: Session C - Case studies ........................................................................ 45
22 Keynote: Conversion of loblolly pine back to native longleaf in the southern USA ........ 46
by Kenneth W. Outcalt
23 Dynamic tendencies of conifers and hardwoods in natural and managed forests of the East-Central Europe ................................................................. 47
by Jerzy Szwagrzyk
24 Conversion of lowland forests in Poland ........................................................................ 48
by Ryszard Miś & Grzegorz Rączka
25 What will be the future of China’s forest plantations? ....................................................... 49
by Chunling Dai
26 Moesian beech (Fagus moesiaca Domin, Malý / Czeczott), a significant genetic resource for the conversion of coniferous forests in Serbia ................................................................. 50
by Milun Kristić et al.
27 Conversion of pure, even-aged Norway spruce plantations to mixed forests on former Atlantic heathland in Denmark ................................................................. 51
by Andreas Brunner & Jens Peter Skovsgaard

Parallel Sessions: Session D - Conversion tools and indicators ........................................ 53
28 Keynote: Successful conversion strategies in the boreal forests of northern Europe:
Retention, admixtures, and overstories in young stands ....................................................... 54
by Sauli Valkonen
