Continent–Ocean Interactions
Within East Asian Marginal Seas

Peter Clift
Wolfgang Kuhnt
Pinxian Wang
Dennis Hayes
Editors

# CONTENTS

**Preface**  
Peter Clift, Wolfgang Kuhnt, Pinxian Wang, and Dennis Hayes .......................................................... vii

**Introduction**  
Cenozoic Deformation and the History of Sea-Land Interactions in Asia  
Pinxian Wang ........................................................................................................................................... 1

**Tectonic Interactions**  
Problem of Positioning Paleogene Eurasia: A Review; Efforts to Resolve the Issue; Implications for the India–Asia Collision  
Jason R. Ali and Jonathan C. Aitchison ........................................................................................................ 23

Reconstructing the Lost Eastern Tethys Ocean Basin: Convergence of the SE Asian Margin and Marine Gateways  
Christian Heine, Dietmar Müller, and Carmen Gaina................................................................................. 37

Sundaland Basins  
Robert Hall and Christopher K. Morley ........................................................................................................ 55

Formation of the Japan and Kuril Basins in the Late Tertiary  
Eiichi Honza, Hidekazu Tokuyama, and Wonn Soh .................................................................................. 87

Experimental Constraints on Cenozoic Development of Ying-Qiong Basin in NW South China Sea  
Zhen Sun, Zhihong Zhong, Di Zhou, Xeulin Qiu, and Xuxuan Li ................................................................. 109

Seafloor Spreading Anomalies in the South China Sea Revisited  
Udo Barckhausen and Hans A. Roeser ........................................................................................................... 121

**Interactions During Arc Collision**  
Geodynamic Context of the Taiwan Orogen  
Jean-Claude Sibuet, Shu-Kun Hsu, and Eric Debayle .............................................................................. 127

An Under-filled Foreland Basin in the Northern South China Sea off Southeast Taiwan: Incipient Collision and Foreland Sedimentation  
Ho-Shing Yu ................................................................................................................................................ 159

**Sedimentary Interactions**  
High-Resolution Seismic Reflection Studies of Late Quaternary Sediments in the Eastern Yellow Sea  
Young Jae Shinn, Sung Kwun Chough, Jae Woo Kim, Sang Hoon Lee, Jusan Woo, Jae Hwa Jin,  
Se Yeol Hwang, Seong Ho Choi, and Man Cheol Suh ............................................................................... 175

Formation of a Mud Belt and Sand Ridges During Holocene Sea-level Rise, Southeastern Yellow Sea  
Jae Hwa Jin and Sung Kwun Chough ........................................................................................................... 193

Late Quaternary Sedimentation in the Eastern Continental Margin of the Korean Peninsula  
Sang Hoon Lee, Jang Jun Bahk, and Sung Kwun Chough ........................................................................... 205
Sediment Supply, Tectonic Subsidence, and Basin-Filling Patterns Across the Southwestern South China Sea During Pliocene to Recent Time
Mychal R. Murray and Steven L. Dorobek ..............................................................235

Climatic Continent–Ocean Interactions

Marine Sedimentary Evidence for Monsoon Strengthening, Tibetan Uplift and Drainage Evolution in East Asia
Peter D. Clift, Graham D. Layne, and Jerzy Blusztajn ..................................................255

Onset and Evolution of Millennial-Scale Variability in the Asian Monsoon and Its Impact on Paleoceanography of the Japan Sea
Ryuji Tada......................................................................................................................283

Neogene History of the Indonesian Throughflow
Wolfgang Kuhnt, Ann Holbourn, Robert Hall, Maja Zuvela, and Rolf Käse .................................................299

Orbitally Paced Climate Variability During the Middle Miocene: High Resolution Benthic Foraminiferal Stable-Isotope Records From the Tropical Western Pacific
Ann Holbourn, Wolfgang Kuhnt, and Michael Schulz...........................................................................321
