CLUSTERS OF GALAXIES
Probes of Cosmological Structure and Galaxy Evolution

Edited by
JOHN S. MULCHAEGY
ALAN DRESSLER
and
AUGUSTUS OEMLER
Contents

Introduction xi
List of Participants xiii

1 Galaxy clusters as probes of cosmology and astrophysics
   August E. Evrard 1
   1.1 Introduction 1
   1.2 Clusters as Dark Matter Potential Wells 4
   1.3 Connecting Mass to Observables: Virial Scaling Relations 11
   1.4 The Dark Matter Virial Relation 15
   1.5 Interpreting n(T): An Example of Cosmological-Astrophysical Confusion 18
   1.6 Discussion 20
   References 21

2 Clusters of galaxies in the Sloan Digital Sky Survey
   Robert C. Nichol 24
   2.1 Introduction 24
   2.2 SDSS Cluster Catalogs 25
   2.3 The C4 Algorithm 26
   2.4 Luminous Red Galaxies 32
   2.5 Galaxy Properties as a Function of Environment 34
   2.6 Strangulation of Star Formation 37
   References 40

3 Clustering studies with the 2dF Galaxy Redshift Survey
   Warrick J. Couch, Matthew M. Colless, and Roberto De Propris 42
   3.1 Introduction 42
   3.2 Galaxy Clustering: Key Results 43
   3.3 Cluster Luminosity Functions 45
   3.4 Star Formation Versus Environment 50
   References 57

4 X-ray surveys of low-redshift clusters
   Alastair C. Edge 58
   4.1 Introduction 58
Contents

4.2 An Historical Perspective .......................... 60
4.3 X-ray Imaging Begins with Einstein ................. 61
4.4 The X-ray Dark Ages .................................. 61
4.5 The Middle Age of X-ray Astronomy? ................. 65
4.6 Can “Edge’s Law” Hold? ............................... 68
4.7 Conclusions .............................................. 69
4.8 A Coda ................................................... 69
References ..................................................... 69

5 X-ray clusters at high redshift

Piero Rosati .................................................. 72
5.1 Introduction .............................................. 72
5.2 Evolution of the Cluster Abundance ..................... 73
5.3 Cosmology with X-ray Clusters ......................... 76
5.4 Distant X-ray Clusters: the Latest View from Chandra .... 80
5.5 Galaxy Populations in the Most Distant Clusters ......... 82
5.6 Conclusions and Future Challenges ..................... 84
References ..................................................... 86

6 The red sequence technique and high-redshift galaxy clusters

Michael D. Gladders ......................................... 89
6.1 Cluster Surveys ......................................... 89
6.2 The CRS Method in Detail .............................. 91
6.3 The Red Sequence and Cluster Confirmation .......... 94
6.4 The Red Sequence Cluster Survey ...................... 95
6.5 Summary and Future Directions ......................... 103
References ..................................................... 106

7 Probing dark matter in clusters

Ian Smail ..................................................... 108
7.1 Introduction ............................................. 108
7.2 Lensing Methods ........................................ 109
7.3 Comparing X-ray and Lensing Masses .................. 114
7.4 Cluster Mass Profiles ................................... 117
7.5 Relating Galaxy Properties to their Dark Matter Environment .... 119
7.6 Summary ............................................... 120
References ..................................................... 121

8 Clusters of galaxies: an X-ray perspective

Richard F. Mushotzky ....................................... 123
8.1 Introduction ............................................. 124
8.2 Temperature Structure of Clusters ..................... 126
8.3 Luminosity-Temperature Relation for Clusters ......... 128
8.4 Optical Light, Velocity Dispersion, and X-ray Properties .... 129
8.5 Surface Brightness Profiles ........................... 131
8.6 Mass of Baryons and Metals and How They Are Partitioned .... 132
## Contents

8.7 Mass Scaling Laws 133
8.8 Form of the Potential 133
8.9 Merges, Structures, etc. 134
8.10 Abundances 135
8.11 Conclusion 139

References 140

### 9 Cool gas in clusters of galaxies

_Megan Donahue and G. Mark Voit_

9.1 A Census of Cool Gas 143
9.2 The Cooling Flow Hypothesis 145
9.3 The Trouble with Cooling Flows 146
9.4 The Galaxy-Cluster Connection 150
9.5 The Revival of Conduction 155
9.6 Paths to a Resolution 156

References 157

### 10 Using the Sunyaev-Zel’’dovich effect to probe the gas in clusters

_Mark Birkinshaw_

10.1 Introduction 161
10.2 The Physics of the Sunyaev-Zel’’dovich Effect 162
10.3 Uses of the Sunyaev-Zel’’dovich Effect in Cluster Studies 165
10.4 Instruments and Techniques 170
10.5 Summary 175

References 175

### 11 The formation of early-type galaxies: observations to $z \approx 1$

_Tommaso Treu_

11.1 Introduction 177
11.2 Evolution of the Number Density 179
11.3 Star Formation History 185
11.4 The Mass Density Profile of Distant E+S0 Galaxies 188

References 192

### 12 Evolution of early-type galaxies in clusters

_Marijn Franx_

12.1 A Working Definition 196
12.2 Homogeneity at Low Redshift 197
12.3 Evolution to $z = 1$ 198
12.4 Complex Models of Galaxy Evolution 200
12.5 Comparison of Field and Cluster Early-type Galaxies 200
12.6 Redshifts $\gg 1$ 202
12.7 Conclusion 204

References 204
# Contents

17.4 Galaxy Evolution: Mergers, Elliptical, and S0 Galaxies 286
17.5 Tidal Stripping and Intracluster Light 288

References 293

## 18 Evolutionary processes in clusters

*Ben Moore*

18.1 Introduction 295
18.2 The Paradigms for Disk and Spheroid Formation 296
18.3 Mechanisms for Transformation 297
18.4 A New Paradigm for the Formation of S0/dS0/dE/dSph/UCD Galaxies 299
18.5 Conclusions 303

References 303

## 19 Interaction of galaxies with the intracluster medium

*Jacqueline H. van Gorkom*

19.1 Introduction 305
19.2 The Statistics of H I Deficiency 307
19.3 Simulations 309
19.4 Comparison of Simulations with H I Imaging 310
19.5 Surveys and the Importance of Interactions with the ICM 317
19.6 Concluding Remarks 320

References 322

## 20 The difference between clusters and groups: a journey from cluster cores to their outskirts and beyond

*Richard G. Bower and Michael L. Balogh*

20.1 Introduction 325
20.2 Clusters of Galaxies 326
20.3 The Other Axis: Density 329
20.4 What Does It All Mean? 334

References 339

## 21 Galaxy groups at intermediate redshift and the mechanisms of galaxy evolution

*Ray G. Carlberg*

21.1 Introduction 343
21.2 Properties of the CNOC2 Groups 344
21.3 Group Galaxy Evolution 346
21.4 Radial Color Gradients of Groups 347
21.5 Merging and the Inward Flow of Group Galaxies 348
21.6 Consequences of Galaxy Evolution in Groups 351

21.7 Conclusions 351

References 351

## 22 The intragroup medium

*John S. Mulchaey*

353

### 23 Symposium summary

**Jeremiah P. Ostriker**

23.1 Introduction                                                      371  
23.2 Important Results Addressed by Speakers                           371  
23.3 EROs                                                              372  
23.4 Observations, Phenomenology, and Data Interpretation              374  
23.5 Methodology and Technology                                         375  
23.6 Important Results Based on Clusters Not Addressed                 376  
23.7 Discussion                                                        376  
References                                                             376
