## Contents

1 **The Financial Activity of Businesses** ........................................ 1  
1.1 The Changeability of Financial Phenomena ............................ 1  
1.2 Business within the Framework of Monetary Circulation ............... 2  
1.3 Classical and Modern Aspects of Financial Studies .................... 6  
1.4 The Economic-Financial and Dividend Policy ........................... 9  

2 **Basic Elements for the Treatment of Uncertainty** ..................... 13  
2.1 From Binary Logic to Multivalent Logic ................................ 13  
2.2 Fuzzy Logic and Fuzzy Sub-Sets ........................................ 19  
2.3 Imprecise Numbers ........................................................ 22  
2.4 With Regard to the Problem of Subjectivity ........................... 29  

3 **Accountancy and Decision Techniques** ................................... 37  
3.1 Financial Statements, Representative Hub of the Financial Situation ...... 37  
3.2 Accounting Instruments Faced with the Future ....................... 40  
3.3 Management in Uncertainty ............................................. 42  

4 **The Estimate of Economic-Financial Values by Means of the Budget** .... 45  
4.1 Budgeting Activity in Business ......................................... 45  
4.2 Budgeting Development .................................................. 48  
4.2.1 Flexible Budgets ...................................................... 49  
4.2.2 Budget Planned by Programmes .................................... 50  
4.2.3 The French System RCB ............................................ 52  
4.2.4 The Zero-Base Budget .............................................. 54  
4.3 The Drawing Up of Provisional Statements ............................ 56  

5 **Long Term Financial Solvency** ........................................... 61  
5.1 Working Capital ........................................................ 61  
5.2 Medium and Long-Term Solvency ........................................ 65  
5.3 Variations in Working Capital ........................................... 67  
5.4 Statement of Source and Application of Working Capital in Uncertainty .... 72
11 Capital Cost ................................................................. 179
  11.1 Concept and Characteristics of Capital Cost .................. 179
  11.2 The Cost of Outside Means of Financing ...................... 181
  11.3 Outside Capital Cost in Uncertainty ......................... 185
  11.4 The Cost of Own (in House) Financial Means ............... 191
  11.5 The Determination of the Cost of the Capital ............... 193

12 Relation between Financial Structure and Capital Cost ....... 203
  12.1 An Overview of the Different Doctrinal Positions ......... 203
  12.2 Uncertain Capital Cost and Financial Structure .......... 205
  12.3 The Constancy of the Cost of Equity and Outside Capital .. 208
  12.4 Mechanisms that Justify the Constancy of Capital Cost ... 211

13 Incidence of the Financial Structure on the Value of the Business .................................. 217
  13.1 Classical Treatment of the Problem ......................... 217
  13.2 New Approaches for Arriving at the Long-Term Value ...... 223
  13.3 Determination of the Value in the Hypothesis of Convergence .... 224
  13.4 Development of the Scheme in the Event of Periodicity .... 234
  13.5 Attempts for Solution of Other Cases ....................... 239

14 Sequential Study of the Modifications in the Ratio of Indebtedness .................................. 241
  14.1 Prior Considerations ........................................... 241
  14.2 General Approach to the Problem ............................ 242
  14.3 Sequential Development of the Model ....................... 246
  14.4 The Solution by Means of Dynamic Programming ............ 250
  14.5 Incorporation of Uncertain Ratios ........................... 253

15 Determination of the Possible Strategies for Reducing Indebtedness in Business .................. 257
  15.1 Approach to the Problem ....................................... 257
  15.2 Sequential Movements of the Index of Indebtedness ......... 259
  15.3 Possibilities of Arriving at the Objective in Two Periods .......... 262
  15.4 Establishment of Valuations by means of Inferences ........ 264
  15.5 Arriving at the Objective in the Medium and Long Term .......... 265
  15.6 Direct Financial Policies ..................................... 273
  15.7 Final Considerations ........................................... 276
16 Sequential Strategies
for Raising Financial Means ........................................ 279
16.1 Approach to the Problem ......................................... 279
16.2 The Objective by Means of Inference Chains ................. 280
16.3 Incidence of the Level of Financing
for Each Objective Over the Source .............................. 283
16.4 Analysis of the Data Obtained ................................. 291
16.5 Possibilities of Arriving at Optimum Combinations .......... 294
16.6 Final Considerations ............................................ 298

17 Differentiation of Financial Products .............................. 303
17.1 The Elements that Differentiate Financial Products .......... 303
17.2 Introduction of the Galois Lattice
to the Problem of Groupings ....................................... 306
17.3 Grouping by Means of Maximum Sub-relations
of Similarity .......................................................... 309
17.4 The Pichat Algorithm ............................................ 312

18 Selection of Financial Products ..................................... 319
18.1 Approach to the Problem ......................................... 319
18.2 A First Approximation: The Coefficient of Adequacy ..... 320
18.3 The Result by Means of the Clan Theory ...................... 324
18.4 Approach to a Model of Subjective Preferences ............. 330
18.5 Application of the Proposed Model ............................ 334

19 Neural Structures for the Selection
of Financial Resources .................................................. 341
19.1 Basic Principles of Neural Structures .......................... 341
19.2 Approach to the Problem ......................................... 346
19.3 Introduction of Neural Structures
to the Financial Problem ........................................... 350
19.4 Final Considerations ............................................. 355

20 Assignment of Financial Means in Business ..................... 359
20.1 Approach to the Problem ......................................... 359
20.2 A First Approximation: The Coefficient of Qualification ... 363
20.3 Assignment of Valuations to the Characteristics
of the Financial Elements .......................................... 366
20.4 Assignment Algorithms ........................................... 371
20.5 The Process of Assignment ...................................... 372
20.6 Final Considerations ............................................. 380
