**Bendiksen, E., Økland, R.H., Høiland, K., Eilertsen, O. &
Bakkestuen, V.**

**Relationships between macrofungi, plants and environ-
mental factors in boreal coniferous forests in the
Solhomfjell area, Gjerstad, S Norway**

2004

CONTENTS

INTRODUCTION	6
THE INVESTIGATION AREA	7
GEOLOGY AND GEOMORPHOLOGY	7
CLIMATE	8
FOREST HISTORY AND HUMAN INFLUENCE	9
PHYTO- AND FUNGAL GEOGRAPHY	9
MATERIAL AND METHODS	10
THE SAMPLING DESIGN	10
RECORDING OF MACROFUNGI	10
RECORDING OF EXPLANATORY VARIABLES	11
<i>Vegetational gradients</i>	11
<i>Recording of vegetation</i>	11
Vegetational explanatory variables	11
<i>Environmental variables</i>	12
Tree measurements	12
Macro-scale variables	14
Meso-scale variables	14
Meso-scale humus-layer variables	15
Transformation of environmental variables	16
<i>Spatial variables</i>	16
CLASSIFICATION OF VEGETATION AND DIVISION INTO DATA SUBSETS	16
<i>Classification</i>	16
<i>Division into data subsets</i>	18
GRADIENT ANALYSIS OF FUNGI	18
<i>Ordination</i>	18
The nature of gradients in fungal species composition	18
Ordination methods	19
Comparison of ordinations	20
Interpretation of ordination results	20
Variation in species abundance and other properties of the funga along DCA axes	20
<i>Constrained ordination</i>	21
Variation explained by single explanatory variables	21
Variation partitioning	21
NOMENCLATURE AND TAXONOMIC NOTES	22
*	
RESULTS	23
CLASSIFICATION	23
FUNGAL SPECIES DENSITY	23

ORDINATION	23
<i>Characteristics of, and comparison between, ordinations of fungi</i>	23
Ordinations of the MAF 97 data set	23
Ordinations of the MAF 95 data set	25
Comparison between the ordinations of the MAF 97 and MAF 95 data sets	27
DCA ordinations of data subsets	28
<i>Relationship between fungal ordinations and vegetational variables</i>	31
Ordinations of the MAF 95 data set	31
DCA ordinations of data subsets	34
<i>Interpretation of ordinations by means of environmental variables</i>	35
Ordinations of the MAF 95 data set	35
DCA ordination of the spruce-forest subset MAF 58A	38
DCA ordination of the pine-forest subset MAF 37B	38
<i>Variation in species abundances in the DCA ordination of the MAF 95 data set</i>	38
Ectomycorrhizal fungi	40
Saprotrophs	46
CONSTRAINED ORDINATION	76
<i>Variation explained by single explanatory variables</i>	76
<i>Variation partitioning</i>	77
DISCUSSION	78
ENVIRONMENTAL INTERPRETATION OF GRADIENTS IN FUNGAL SPECIES COMPOSITION	78
<i>The main gradient and its relation to broad-scale topography and soil nutrient content</i>	78
Relationships with environmental variables in the spruce and pine forests	78
Spruce forest: the complex-gradient in nutrient status	78
Pine forest: relative importance of factors related to topography and nutrients	81
<i>Spruce forest: a gradient in cover by deciduous litter and bryophytes?</i>	85
<i>Pine and spruce forests: the fine-scale paludification gradient</i>	86
FACTORS DETERMINING VARIATION IN FUNGAL ABUNDANCE	88
COMMENTS ON FIELD METHODOLOGY AND INTEGRATED APPROACHES TO MACROFUNGI AND PLANTS	89
GENERAL CONCLUSIONS	89
ACKNOWLEDGEMENTS	91
REFERENCES	92
APPENDICES	103
Appendix 1	103
Appendix 2	109
Appendix 3	110
Appendix 4	118
