# Britain beneath our feet

An atlas of digital information on Britain's land quality,  
underground hazards, resources and geology

2005 B 908

# Contents

## **Introduction** 1

## **A guide to the atlas** 2

## **Base data** 5

- Surface geology 6
- Thickness of superficial deposits 8
- Height of the bedrock surface 10
- Bedrock age 12
- Bedrock geology 14
- Structure of the bedrock 16
- Variation in gravity field 18
- Variation in magnetic field 20
- Compass variation 22
- Magnetic storm effects 24
- Historical geology 26

## **Land quality and groundwater** 29

- Hydrogeology 30
- Water flow through rocks 32
- Groundwater signature 34
- Groundwater level 36
- Groundwater vulnerability 38
- Fluoride in stream water 40
- Stream water acidity 42
- Copper in stream sediment 44
- Uranium in stream sediment 46
- Arsenic in soil 48

## **Hazards** 51

- Landslides 52
- Swelling and shrinking clay 54
- Soluble rocks 56
- Collapsible and compressible materials 58

- Running sand 60
- Radon 62
- Methane, carbon dioxide and oil seepage 64
- Earthquakes 66
- Earthquake intensity 68
- Groundwater flooding 70
- Flooding in the recent geological past 72
- Underground mining 74

## **Resources** 77

- Coal 78
- Industrial minerals 80
- Building stones 82
- Sand and gravel 84
- Metallic minerals 86
- UK minerals production, supply and demand 88
- Heat flow 90

## **Offshore and coastal** 93

- Bathymetry 94
- Sea bed sediments 96
- Quaternary deposits 98
- Thickness of Quaternary deposits 100
- Bedrock age 102
- Geological hazards 104
- Copper in sea bed sediment 106
- Oil and gas 108

## **Obtaining the digital data** 111

## **Acknowledgements** 113

## **The British Geological Survey** 114
