Ken Freeman and Geoff McNamara

In Search of Dark Matter
# Table of contents

**Authors’ preface** ix  
**List of illustrations** xi  
**Prologue: the quest for darkness** xiii

## 1 HOW TO WEIGH GALAXIES 1

- Introduction 1
- How to weigh galaxies 2
- Newtonian gravitation and finding the invisible 2
- How to measure stellar motions 4
- How galaxies stay inflated 6
- Circular motion 7
- Random motion 7
- The Jeans equations 7
- Mass-luminosity relationship 9
- Gravitational versus luminous mass 10

## 2 THE FALSE DAWN 11

- Historical background 11
- Introducing Oort 12
- Oort discovers differential rotation 14
- Oort ‘discovers’ disk dark matter 15
- The problem with K stars 16
- Thin disk and thick disk 17
- Bahcall and the resurgence of interest in disk dark matter 17
- Oort’s error revealed 18
- Not the end of disk dark matter 18

## 3 SEEING THE INVISIBLE 21

- Introducing Zwicky 21
- Galaxy clusters 25
- Zwicky and Abell cluster catalogues 25
- The Coma Cluster 27
- Measuring cluster ‘pressure’ 28

## Table of contents

Weak lensing 77
Abell 2218 77

### 8 THE BARYON INVENTORY 83
- $\Omega$ (omega) as a common unit of measurement 83
- $\Omega_b$ 84
- Big Bang Nucleosynthesis 84
- Observing baryonic matter 85
- Observing $\Omega_b$ 86
- $\Omega_b$ at $z = 3$ 86
- $\Omega_b$ in the present epoch 87
- Does $\Omega_b$ match up? 87
- Unseen baryonic matter? 88
- Baryonic matter in groups and clusters of galaxies 88
- The baryon catastrophe 89
- Virgo and Coma baryonic matter compared 90

### 9 MACHO ASTRONOMY 93
- Historical build-up 93
- The Great Melbourne Telescope 96
- Software development 98
- The first MACHO event 98
- Looking at the centre of the Galaxy 100
- Results 100
- Problems and uncertainties 100
- Magellanic Stream debris 101
- Variable stars, if nothing else 102
- Searching for extrasolar planets 102
- The future of MACHO 102

### 10 WHAT CAN THE MATTER BE? 105
- Baryonic dark matter: why it is suspected 105
- Faint stars 105
- Small hydrogen snowballs 106
- Massive black holes 106
- Small black holes 108
- Small dense clouds 109
- Brown dwarfs 110
- Primordial black holes 110
- Between the galaxies 111
- How to find intracluster stars 112
- Intracluster gas 114
- Milgrom’s alternative theory of gravity 114
# Table of contents

## 11 EXPLORING EXOTICA: NEUTRINOS
- Why non-baryonic dark matter is suspected 117
- Classes of non-baryonic dark matter 119
- Neutrinos 120

## 12 EXPLORING EXOTICA: WIMPS AND AXIONS
- WIMPs 123
- Fundamental forces and supersymmetry 124
- Supersymmetry 125
- Neutralinos 125
- WIMP searches 126
- Axions 126

## 13 IN THE BEGINNING...
- Hot and cold dark matter 131
- Creation of large-scale structure 132
- Cosmic microwave background 133
- HDM or CDM? 135

## 14 TOWARDS OMEGA
- Critical density preferred 139
- An accelerating Universe: dark energy 140
- What is the cosmological constant? 141
- What is vacuum energy? 141
- Cosmological parameters 143
- Constraining $\Omega_b$, $\Omega_m$ and $\Omega_\Lambda$ 143
- Could this be it? 145

### Appendix 1 What is matter?
- Definition of matter 147
- Macroscopic: cells 148
- Molecules 148
- Elements 149
- Atoms 149
- Structure of the atom: electrons, protons and neutrons 149
- Quarks 150
- Leptons 150
- Energy 150

### Appendix 2 Expressing mass
