Contents

Preface xi

Chapter 1: Introduction 1
1.1 Chemical Composition of the Ocean 1
1.2 Distribution of Chemicals in the Ocean 7
1.3 Chapter Conclusion and Outline of Book 15

Problems 16

Chapter 2: Tracer Conservation and Ocean Transport 19
2.1 Tracer Conservation Equation 19
   Advection and Diffusion Components 19
   Application to Box Models 22
2.2 Wind-Driven Circulation 23
   Equations of Motion 27
   Ekman Transport 28
   Gyre Circulation 30
2.3 Wind-Driven Circulation in the Stratified Ocean 33
   Basic Concepts 34
   Ocean Stratification 34
   Geostrophic Equations 37
   Gyre Circulation with Stratification 37
   Insights from the Potential Vorticity Distribution 38
   Insights from Tracers 39
   Insights from the Thermal Wind Relationship 42
2.4 Deep Ocean Circulation 46
   Observations 46
   Models 52
   Summary of Deep Ocean Circulation 57
2.5 Time-Varying Flows 59
   Mesoscale Variability 60
   Interannual to Decadal Variability 61
   Tropical Variability 61
   Extratropical Variability 66

Problems 69
Chapter 5: Organic Matter Export and Remineralization

5.1 Introduction
- Nutrient and Oxygen Distributions
- Remineralization Reactions
- Preformed and Remineralized Components
- Dissolved and Particulate Organic Matter
- Outline

5.2 Oxygen
- Separation of Preformed and Remineralized Components
- Deep Ocean Oxygen Utilization Rates
- Thermocline Oxygen Utilization Rates

5.3 Nitrogen and Phosphorus
- Stoichiometric Ratios
- Phosphate
- The Nitrogen Cycle
  - $N^*$ as a Tracer of Denitrification
  - $N^*$ as a Tracer of $N_2$ Fixation
  - The Oceanic Nitrogen Budget
- Nitrous Oxide

5.4 Organic Matter Cycling
- Particulate Organic Matter
  - Overview
  - Particle Flux
  - The Role of Ballast
  - Particle Remineralization
  - Models of Particle Interactions
- Dissolved Organic Matter

5.5 Models
- Model Development
- Sensitivity Studies
- Applications: Control of Oceanic Oxygen
- Problems

Chapter 6: Remineralization and Burial in the Sediments

6.1 Introduction
- Observations
- Sediment Properties and Processes
- Remineralization Reactions

6.2 Sediment Diagenesis Models
- Pore Waters
- Solids

6.3 Remineralization
- Oxic Sediments
- Anoxic Sediments
- Dissolved Organic Carbon

6.4 Burial
- The Substrate
- The Oxidant
## Chapter 9: Calcium Carbonate Cycle

9.1 Introduction 359  
9.2 Production 362  
Organisms 362  
Export Estimates 363  
Inorganic-to-Organic Carbon Export Ratio 363  
9.3 Water Column Processes 365  
\( \text{CaCO}_3 \) Solubility 365  
Variations in Saturation State 368  
Carbonate Ion Distribution 368  
Water Column Dissolution 371  
9.4 Diagenesis 374  
\( \text{CaCO}_3 \) Dissolution in Sediments 374  
Modeling \( \text{CaCO}_3 \) Diagenesis 379  
Model Applications 379  
Concluding Remarks 384  
9.5 Calcium Carbonate Compensation 384  
\( \text{CaCO}_3 \) Homeostat 384  
\( \text{CaCO}_3 \) Compensation 386  
Problems 389

## Chapter 10: Carbon Cycle, \( \text{CO}_2 \), and Climate

10.1 Introduction 392  
Greenhouse Effect 394  
Global Warming 396  
Outline 398  
10.2 The Anthropogenic Perturbation 399  
Capacity Constraints 400  
Buffering by Dissolved Carbonate 400  
Buffering by Sediment \( \text{CaCO}_3 \) 401  
Buffering by Weathering 402  
Kinetic Constraints 402  
Atmospheric Pulse Response 402  
Ocean Uptake and Buffering with Dissolved Carbonate 403  
Buffering by Sediment \( \text{CaCO}_3 \) 405  
Anthropogenic \( \text{CO}_2 \) Uptake 405  
Direct Estimation 406  
Reconstruction of Anthropogenic \( \text{CO}_2 \) Inventory 408  
The Atmospheric Oxygen Method 413  
The Role of Biology 414  
Future \( \text{CO}_2 \) Uptake 415  
10.3 Interannual to Decadal Timescale Variability 417  
Tropical Variability 419  
Extratropical Variability 423  
10.4 Glacial-Interglacial Atmospheric \( \text{CO}_2 \) Changes 429  
Setting the Scene 431  
Terrestrial Biosphere Carbon Loss 431  
Salinity Changes 432  
Temperature Changes 434
