Proceedings of the ECMWF workshop on Representation of sub-grid processes using stochastic-dynamic models 6 — 8 June 2005 European Centre for Medium-Range Weather Forecasts Shinfield Park, Reading, Berkshire, UK September 2005
Workshop on Representation of sub-grid processes using stochastic-dynamic models, 6 to 8 June 2005

Contents

List of Participants ................................................................. iii
Introduction ..................................................................... vii

Working group reports and recommendations

Group 1: Issues in convection ........................................................ ix
Group 2: Evidence from observations and Direct Numerical Simulations ............................................ xiii
Group 3: The parametrization problem in weather and climate models ................................................ xvii

Session 1: Introduction

T. N. Palmer
Stochastic-dynamic parametrisation in weather and climate prediction models: An introduction ........ 1

Prashant D. Sardeshmukh
Issues in stochastic parameterization ....................................... 5

Glenn Shutts
Kinetic energy backscatter for NWP models and its calibration ............................................. 13

Harm Jonker, Peter Duynkerke, Stephan de Roode and Jordi Vila
Spectral transfer of TKE and scalar variance in the meso- and micro-scale range: direction of the average flow and the significance of backscatter ........................................ 25

Stephen J. Thomas, Joshua Hacker and Peter Bartello
Stochastic sub-grid scale models and the spectral kink ......................................................... 37

Pavel S. Berloff
Stochastic modelling of the oceanic eddies ........................................ 43

Adam Hugh Monahan
Stochastic dynamics of sea-surface winds ........................................ 47

Cécile Penland and Philip Sura
Sensitivity of an ocean model to “details” of stochastic forcing .................................................. 57

Klaus Fraedrich
Stochastic-dynamic analyses of subscale processes - Observations in the tropics and applications in a GCM .................................................. 65

Bjorn Stevens, Yunyan Zhang and Michael Ghil
Stochastic effects in the representation of stratocumulus-topped mixed layers ................................ 79

Mitchell W. Moncrieff, Changhui Liu and Hsiao-ming Hsu
Convective dynamics issues at ~10 km grid-resolution ............................................................. 91

George C. Craig, Brenda G. Cohen and Robert S. Plant
Statistical mechanics and stochastic convective parameterisation .............................................. 107
Adrian Tompkins
Stochastic input to convection based on sub-grid temperature and humidity distributions.................. 115

Judith Berner, Glenn Shutts and Tim Palmer
Parameterising the multiscale structure of organised convection using a cellular automaton........ 129

Johnny Wei-Bing Lin and J. David Neelin
Toward stochastic deep convective parameterization.......................................................................... 140

Boualem Khouider and Andrew J. Majda
Coarse grained stochastic models for tropical convection and climate.............................................. 151
