Automated Deduction in Geometry
# Table of Contents

Mechanical Theorem Proving in Computational Geometry  
Laura I. Meikle, Jacques D. Fleuriot ........................................ 1

Computational Origami Construction of a Regular Heptagon with Automated Proof of Its Correctness  
Judit Robu, Tetsuo Ida, Dorin Țepeneu, Hidekazu Takahashi, Bruno Buchberger ...................................................... 19

Proving Geometric Theorems by Partitioned-Parametric Gröbner Bases  
Xuefeng Chen, Peng Li, Long Lin, Dingkang Wang .......................... 34

Computations of the Area and Radius of Cyclic Polygons Given by the Lengths of Sides  
Pavel Pech ................................................................. 44

Symbolic Solution of a Piano Movers’ Problem with Four Parameters  
Lu Yang, Zhenbing Zeng .................................................. 59

Computing Curves Bounding Trigonometric Planar Maps: Symbolic and Hybrid Methods  
Daniel Lichtblau ............................................................ 70

Towards Solving the Dynamic Geometry Bottleneck Via a Symbolic Approach  
Francisco Botana, Tomás Recio ........................................... 92

On the Decidability of Tracing Problems in Dynamic Geometry  
Britta Denner-Broser ....................................................... 111

Towards a Geometric-Object-Oriented Language  
Tielin Liang, Dongming Wang ............................................. 130

Spatial Planning and Geometric Optimization: Combining Configuration Space and Energy Methods  
Dmytro Chibisov, Ernst W. Mayr, Sergey Pankratov ...................... 156

nD Polyhedral Scene Reconstruction from Single 2D Line Drawing by Local Propagation  
Hongbo Li ................................................................. 169
Planar Generalized Stewart Platforms and Their Direct Kinematics

Gui-Fang Zhang, Xiao-Shan Gao
