ENVIRONMENTAL CHANGE AND WATER SUSTAINABILITY
CONTENTS

Preface (J.A.A. Jones) ........................................................................................................ 7

1. Water resources in relation to land use and plant cover changes

Francesc Gallart and Pilar Llorens: Water resources and environmental change in Spain. A key issue for sustainable integrated catchment management. .................. 11

Teresa Echeverría, Paloma Ibarra and Juan Martínez: Soil moisture in oak-wood and pine-wood of the Moncayo (Iberian Range, Spain). ................................. 21

Beatriz Mateos and Susana Schnabel: Rainfall interception in Mediterranean open woodland. ........................................................................................................ 31

Jordi Nadal, Joan Manuel Soriano and Joan Saldaña: Geochemical behaviour of catchments with different land cover: effect of land abandonment. ................. 43

María Paz Errea, Teodoro Lasanta, Luis Ortigosa and Artemi Cerdà: Soil moisture changes after land abandonment in the Central Spanish Pyrenees. .......... 51

Johannes B. Ries and Margarete Langer: Runoff generation on abandoned fields in the Central Ebro Basin. Results from rainfall simulation experiments. ............. 65

Manuel Seeger and Johannes B. Ries: Runoff generation on abandoned fields in the Central Ebro Basin. Results from modelling. .................................................. 83

Tilmann Sauer and Johannes B. Ries: The water balance of different soils on abandoned fields along a transect from the High Pyrenees to the Central Ebro Basin. ................................................................................................. 99

2. Climate change and water resources

N.C. Mountain and J.A.A. Jones: Estimating low flow frequencies in the mid to late 21st century for two basins in the Central Wales. ..................................................... 111

Ro Charlton, Sonja Moore, John Sweeney and Rowan Fealy: Climate change and water resources in Ireland: Initial investigations using downscaled GCMS and hydrological modelling techniques. .............................................................. 129

H.-T. Mengelkamp, J. Sutmüller and T. Zhao: Runoff simulation in the Upper Oder catchment during the flooding event 1997 with a coupled atmospheric / hydrological model. ................................................................. 141

C. Ramos, E. Reis, A. Ramos Pereira, T.M. Azevedo, E. Nunes, M.C. Freitas and C. Andrade: Late Holocene evolution of the lower Tagus alluvial plain and heavy metals content: Preliminary results. ................................................................. 167

Olga E. Scarpati, Liliana Spescha, María J. Fioriti and Alberto D. Capriolo: El Niño driven climate variability and drainage anomalies in Patagonian region, Argentina. ................................................................. 183

Peter Waylen and Marvin Quesada: The effect of Atlantic and Pacific sea surface temperatures on the mid-summer drought of Costa Rica. ................................................................. 197

3. Water salinization and contamination

Teodoro Lasanta, Wouter Mosch, María Carmen Pérez-Rontomé, Ana Navas, Javier Machín and Melchor Maestro: Effects of irrigation on water salinization in semi-arid environments. A case study in Las Bardenas, Central Ebro Depression, Spain. ......................................................................................... 211

Javier Machín and Ana Navas: Environmental impact of salinity by diffuse contamination on the water quality of the Arba River. ................................................................. 219

J.N. Turner, P.A. Brewer, M.G. Macklin, K.A. Hudson-Edwards, T.J. Coulthard, A.J. Howard and H.E. Jamieson: Heavy metals and As transport under low and high flows in the River Guadiamar three years after the Aznalcóllar tailings dam failure: Implications for river recovery and management. ....................... 235

Frank Winde: Uranium contamination of fluvial systems – Mechanisms and processes. Part I: Geochemical mobility of uranium along the water path – the Koekemoerspruit (South Africa) as a case study. ................................................................. 253

Frank Winde and Jacobus van der Walt: Uranium contamination of fluvial systems – Mechanisms and processes. Part II: Dynamics of groundwater-stream interaction – A case study from Koekemoerspruit (South Africa). ................................................................. 263

4. Water resources management and reservoirs

Juan Ignacio López-Moreno, Santiago Beguería and José M. García-Ruiz: Floods downstream the Yesa Reservoir, Spanish Pyrenees. ................................................................. 305

Jacobus van der Walt and Ben Nell: Integrated catchment management: The Mooi River (Northwest Province, South Africa) as a case study. ................................................................. 313

Li Li-juan and Zheng Hong-xing: Environmental and ecological water requirements of a river system: A case study of the Haihe-Luanhe River system. ................................................................. 331
