## Contents

Using Wood Composites as a Tool for Sustainable Forestry .......................................................... 1
North American Perspective on Using Wood-Based Structural Composite Products as Forest Management Tools to Improve Forest Health and Sustainability and to Reduce Forest Fuels and Exotic-Invasive Species ................. 2
Using Cedar Plantation Materials for Wood-Based Composites in Japan ........................................... 9
European Experiences with Wood and Natural Fibre Composites .................................................. 26
Wood Composite Made of *Populus* Plantation Material in China ..................................................... 37
Advances in Utilizing Whole Trees for Composites ........................................................................... 42
In-situ Microdielectrical Evaluation of the Curing Process of the Adhesive in Plywood Manufacturing .......................................................... 52
Characterizing the Rheological Properties of Wood-Plastic Composite Formulations ....................... 53
Physical and Mechanical Properties of Oriented Strandboard made using Kraft Lignin Phenol Formaldehyde Resin Study of WPC: A Methodology of Evaluation of Interfacial Adhesion .......................................................... 59
Study of WPC: A Methodology of Evaluation of Interfacial Adhesion ............................................. 60
Strength Properties of Engineered I-Joists Made From Laminated Veneer Lumber (LVL), Solid Wood, Oriented Strand Board (OSB), and Plywood .......................................................... 61
Effects of Particle Size and Orientation on Properties of Particleboard Made From Ethiopian Highland Bamboo (*Yushania Alpina*) ........................................................................................................................................................................... 65
Comparisons of Boards Properties Made From Different Waste Papers ............................................. 72
An Experiment On Producing Laminated Waste Newspaper Boards .................................................. 78
Strength Properties of Glued Laminated Bamboo (*Gigantochloa scortechinnii*) Strips for Furniture .......................................................... 83
Fundamental Properties of Com-Ply Made of Small Diameter Fast Growing Species and Mersawa Veneer .......................................................... 86
